#### SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. Figures not available.
- ... Figures not appropriate or not applicable.
- \_ Nil or zero.
- Amount too small to be expressed.
- p Preliminary figures.
- r Revised figures.
- x Confidential to meet secrecy requirements of the Statistics Act.

#### SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. Nombres indisponibles.
- ... N'ayant pas lieu de figurer.
- \_ Néant ou zéro.
- Nombres infimes.
- p Nombres provisoires.
- r Nombres rectifiés.
- x Confidentiels en vertu des dispositions de La Loi sur la statistique relatives au secret.

# NOTES ON PRICES AND PRICE INDEX NUMBERS

## Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) moved up 1.5 % in January 1973 to 132.8 from the December 1972 index of 130.8. It was 6.7 % higher than the January 1972 index of 124.5. Of the 101 industry indexes included in the Total, 68 were higher, 12 declined and 21 were unchanged.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes in January were increases recorded in the foods and beverages group reflecting higher prices in the slaughtering and meat packing, feed manufacturers, and poultry processors industries. The wood products group, which has been rising steadily since November of 1971, moved higher in response to price increases registered in the sawmills and planing mills, and sash, door and other millwork industries. Advances in the petroleum and coal group reflected higher prices in the petroleum refining industry. The primary metals group continued to rise on increases recorded in the smelting and refining, and in the iron and steel mills industries. Decreases in January were relatively insignificant.

## December to January Changes in Industry Indexes

# NOTES SUR LES PRIX ET LES INDICES DE PRIX

## Prix de vente dans l'industrie: industries manufacturières (1961=100)

L'indice des prix de vente dans l'industrie (toutes industries manufacturières) a augmenté de 1.5 % en janvier 1973 pour s'établir à 132.8, contre 130.8 en décembre 1972. Il était de 6.7 % plus élevé que celui de janvier 1972 (124.5). Sur les 101 indices des prix industriels qui composent le total, 68 ont augmenté, 12 ont diminué et 21 sont demeurés inchangés.

Pour ce qui est de l'apport de chacune des industries à l'indice total de l'activité manufacturière, les changements les plus appréciables sont les progressions observées dans le groupe des aliments et boissons, par suite de la hausse des prix dans les abattoirs et usines de conditionnement de la viande, dans la fabrication des aliments pour animaux et dans les industries de conditionnement de la volaille. Le groupe des produits du bois, où il y a eu une augmentation constante depuis novembre 1971, a continué à progresser en raison de l'augmentation des prix dans les scieries et dans l'industrie des portes et châssis et ateliers de rabotage. L'avance observée dans le groupe du pétrole et du charbon est attribuable à la hausse des prix dans les raffineries de pétrole. Le groupe de la première transformation des métaux a continué à progresser par suite de la hausse des prix dans l'industrie de la fonte et de l'affinage d'une part et dans l'industrie du fer et de l'acier d'autre part. Les diminutions au cours de janvier ont été, à toutes fins utiles, négligeables.

# General Wholesale Index (1935-39=100)

The general wholesale index moved up 2.5 % in January 1973 to 336.4 from the revised December 1972 index of 328.3. It was 12.3 % higher than the January 1972 index of 299.6. All eight major group indexes were higher.

The animal products group index rose 3.3 % to 405.2 from 392.2 reflecting price increases for livestock, fresh and cured meats, boots and shoes, fishery products and fresh milk. Higher prices for worsted yarns, cotton knit goods, raw cotton, cotton fabrics, and domestic and imported raw wool were mainly responsible for a rise of 3.0 % to 291.6 from 283.0 in the textiles products group index. The vegetable products group index moved 2.7 % higher to 288.4 from the revised December index of 280.7 on price increases for unmanufactured tobacco, grains, potatoes, livestock and poultry feeds, and sugar and its products. The food products group index moved up 2.3 % to 477.2 from the revised December index of 466.3 on higher prices for fir, cedar and spruce. Price increases registered for petroleum and its products resulted in an advance of 2.3 % in the non-metallic mineral products group index to 240.9 from the revised December index of 235.4. An increase of 2.2 % to 278.3 from 272.3 in the non-ferrous metal products group index reflected higher prices for copper, silver and zinc. The iron products group index moved up 1.5 % on price increases for rolling mill products and scrap iron and steel. The chemical products group index moved fractionally higher to 250.5 from 249.0. The following table lists the Total Index and component groupings for specified dates:

The General Wholesale Index, which advanced 12.3 % from January 1972, contains relatively few final product price indexes for commodities such as consumer durable goods, whose prices have changed little during the past year. The I.S.P.I. manufacturing, which advanced 6.7 % during the same period, does include such products.

# Indice générale des prix de gros (1935-39=100)

L'indice général des prix de gros a augmenté de 2.5 % en janvier 1973 pour atteindre 336.4, contre 328.3 (indice révisé) en décembre 1972. Il était de 12.3 % supérieur à celui de janvier 1972 (299.6). Les huit indices des groupes d'activité ont tous augmenté.

L'indice des produits d'origine animale s'est accru de 3.3 %, passant de 392.2 à 405.2, par suite de l'augmentation du prix du bétail, de la viande fraîche et salée, des bêtes et des souliers, des produits de la pêche et du lait de consommation. La hausse du prix de la laine peignée, des tricots de coton, du coton brut, du tissu de coton et de la laine brute canadienne et importée a été la principale cause de l'augmentation de 3.0 % de l'indice des produits textiles (de 283.0 à 291.6). L'indice des produits d'origine végétale a augmenté de 2.7 % pour atteindre 288.4 (l'indice révisé de décembre est de 280.7), par suite de la hausse du prix du tabac à l'état brut, des céréales, des pommes de terre, des aliments pour volaille et bétail, du sucre et de ses dérivés. L'indice des produits du bois a progressé de 2.3 % pour s'établir à 477.2 (l'indice révisé de décembre est de 466.3) en raison de l'accroissement du prix du sapin, du thuya et de l'épinette. La hausse du prix du pétrole et de ses dérivés a entraîné une avance de 2.3 % de l'indice des produits minéraux non métalliques qui est passé de 235.4 (indice révisé) en décembre à 240.9 et janvier. L'indice des produits métalliques non ferreux s'est accru de 2.2 %, passant de 272.3 à 278.3, par suite de l'augmentation du prix du cuivre, de l'argent et du zinc. L'indice des produits du fer a avancé de 1.5 % en raison de l'accroissement du prix des produits laminés et des déchets de fer et d'acier. L'indice des produits chimiques a enregistré une très faible augmentation, soit de 249.0 à 250.5. Le tableau ci-dessous présente les variations les plus importantes:

L'indice général des prix de gros, qui a progressé de 12.3 % par rapport à janvier 1972, contient relativement peu d'indices de prix pour les produits finis tels que les biens durables de consommation, dont les prix ont très peu varié au cours de l'année dernière. L'indice des prix de vente dans l'industrie (toutes industries manufacturières), qui a avancé de 6.7 % au cours de la même période, comprend ces produits.

Note: Indexes for 1972 and 1973 are subject to revision. Nota: Les indices de 1972 et 1973 sont sujets à révision.

### Security Price Indexes (1961=100)

The investors index of common stock prices moved up 2.8 % over December to an all time high of 194.5. Of the three major groups, industrials rose 3.9 % to 205.8, utilities gained 1.4 % to 157.0 and finances declined 1.1 % to 194.0. Amongst the thirteen industrial sub-groups, increases were registered in all but one, petroleum which decreased 0.6 % to 361.6; the most important gains were 14.2 % to 140.4 in Construction, 12.0 % to 136.0 in industrial mines and 8.3 % to 118.2 in pulp and paper. In utilities, electric power eased 0.6 % to 124.8; all other sub-groups gained a few points. A decline in the finance index resulted from a loss in both sub-groups: banks declined 1.1 % to 222.0, investment and loans eased 1.2 % to 152.9.

In the same period, the index of mining stock prices rose 13.6 % to 118.6 (this is the most important percentage increase since October 1971): golds and base metals moved up 12.2 % to 124.2 and 14.5 % to 116.6 respectively.

Of the two supplementary price indexes, uraniums and primary oils and gas showed increases of 13.5 % to 183.8 and 1.6 % to 568.6.

The preferred stock index rose 3.0 % to 74.4 from 72.2 in December.

### Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, advanced 3.7 % to 337.4 in January from the December index of 325.4. Prices were higher for seventeen commodities and unchanged for thirteen. Principal changes included increases for steers, linseed oil, steel scrap, spruce lumber, iron ore, domestic copper, raw sugar, bleached sulphite pulp, steel bars, beef hides, fir timber, domestic zinc, oats, wheat and tin.

### Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets advanced 3.9 % to 325.2 in January from the December index of 313.1. An increase of 4.1 % to 216.2 from 207.6 in the field products index reflected higher prices for potatoes, rye and hay on both markets, for tobacco, corn and barley in the East, and for flax in West. The animal products index rose 3.7 % to 434.2 from 418.7 on higher prices for steers, lambs, hogs, eggs and fluid milk on both markets, and for calves in the East. Lower prices were shown for calves in the West.

### Indices des cours des valeurs mobilières (1961=100)

L'indice des cours de placement des actions ordinaires a avancé de 2.8 % entre décembre et janvier pour atteindre un niveau record de 194.5. En ce qui concerne les trois principaux groupes, l'indice des valeurs industrielles (205.8) a augmenté de 3.9 %, celui des services d'utilité publique (157.0) s'est accru de 1.4 % et celui des finances (194.0) a diminué de 1.1 %. Parmi les treize sous-groupes des valeurs industrielles, tous les indices ont augmenté, sauf un, celui du pétrole qui a diminué de 0.6 % pour s'établir à 361.6; les gains les plus importants ont été de 14.2 % dans la construction (140.4), de 12.0 % dans les mines industrielles (136.0) et de 8.3 % dans l'industrie de la pâte et du papier (118.2). Dans le cas des services d'utilité publique, l'énergie électrique a diminué de 0.6 % pour se fixer à 124.8; tous les autres sous-groupes ont augmenté quelque peu. La diminution de l'indice des finances est attribuable à une baisse de ses deux sous-groupes: les banques (222.0) ont régressé de 1.1 %, les placements et les prêts (152.9), de 1.2 %.

Au cours de la même période, l'indice du cours des titres miniers a progressé de 13.6 % pour atteindre 118.6 (il s'agit de la plus forte augmentation en pourcentage depuis octobre 1971); l'or a augmenté de 12.2 % pour atteindre 124.2 et les métaux communs ont avancé de 14.5 % pour se fixer à 116.6.

Dans le cas des deux autres indices, l'uranium (183.8) ainsi que le pétrole et le gaz primaires (568.6) ont augmenté respectivement de 13.5 % et de 1.6 %.

L'indice des actions privilégiées a avancé de 3.0 %, passant de 72.2 en décembre à 74.4 en janvier.

### Indices des prix de trente produits industriels (1935-39=100)

L'indice des prix de trente produits industriels, calculé sous forme de moyenne géométrique non pondérée, a augmenté de 3.7 %, passant de 325.4 en décembre à 337.4 en janvier. Les prix de dix-sept produits ont augmenté et ceux des treize autres sont demeurés inchangés. Les principaux changements comprennent une augmentation du prix des bouillons, de l'huile de lin, des déchets d'acier, du bois de charpente d'épinette, du minerai de fer, du cuivre canadien, du sucre brut, de la pâte blanchie au sulfite, de l'acier en barres, des peaux de boeuf, du bois d'oeuvre de sapin, du zinc canadien, de l'avoine, du blé et de l'étain.

### Indice des prix des produits agricoles canadiens (1935-1939=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 3.9 %, passant de 313.1 en décembre à 325.2 en janvier. L'indice de prix des grandes cultures a avancé de 4.1 %, passant de 207.6 à 216.2, par suite de la hausse du prix des pommes de terre, du seigle et du foin sur les deux marchés, du tabac, du maïs et de l'orge dans l'Est, et du lin dans l'Ouest. L'indice des produits d'origine animale a augmenté de 3.7 % (de 418.7 à 434.2) en raison de l'augmentation du prix des bouillons, des agneaux, des porcs, des oeufs et du lait de consommation sur les deux marchés, ainsi que des veaux dans l'Est. Le prix des veaux a diminué dans l'Ouest.

The Consumer Price Index for Canada (1961=100) advanced 0.8 % to 144.5 in January from 143.3 in December, which is the largest increase between these two months since before 1961 and contrasts with an average increase between these two months in the preceding five years of 0.3 %. The major impetus to the latest month's increase was provided by Food prices which advanced 2.0 %. The level of prices for All-Items other than Food rose 0.4 % mainly because of a 0.8 % advance in the Housing index. The other components recording increases were Tobacco and Alcohol (0.4 %), Health and Personal Care (0.1 %) and Recreation and Reading (0.1 %). On the other hand, Clothing prices decreased 0.3 % and the Transportation index declined 0.1 %. Between January 1972 and January 1973, the All-Items Index advanced 5.7 %.

The Food index rose 2.0 % to 150.0 in January from 147.1 in December, thus recording the largest increase between these two months since before 1961. In the latest month, restaurant meal prices rose 1.1 % reflecting increases in many cities across the country. The price level of food consumed at home advanced 2.1 % mainly in response to higher prices for beef, pork, eggs, fresh vegetables and milk, although all other major foods also registered increases. In the latest month, the meat, fish and poultry index advanced 3.4 %. Beef and pork prices increased 5.8 % and 2.7 %, respectively, with all cuts contributing to the advance. The poultry index rose 0.8 % as higher chicken prices outweighed lower quotations for turkey. Since January 1972, the meat, fish and poultry index advanced over 15 % with pork prices increasing, on average, over 28 %. Between December and January, egg prices rose 7.8 % to stand over 20 % above their level of a year previous. In the latest month, the vegetable index advanced 5.4 % as higher prices were registered for most fresh, frozen and canned varieties. Fruit prices rose 2.0 %, on average, as increases for some fresh, canned and frozen items were partly offset by declines for others. Since January 1972, the vegetable index advanced over 16 % and that for fruit, 11 %. Between December and January, price increases were recorded for most dairy products. Fresh milk rose 3.1 % in price following increases in most Ontario cities as well as in St. John's, Calgary and Edmonton. The bakery and cereal products index increased 0.4 % as most items priced, including bread, corn flakes and cake mix registered advances. Among other foodstuffs, decreases were recorded for ground coffee and peanut butter as special prices took effect in some cities, and soup, infants' food and sugar also fell in price. However, soft drinks, jelly powder, jam, tea and instant coffee were among the items recording increases. Since January 1972, the Food index advanced 10.0 %, with the price of food consumed at home increasing 10.3 % and that for restaurant meals 1.8 %.

The Housing index advanced 0.8 % to 148.0 in January from 146.8 in December as a result of increases of 0.5 % and 1.5 % in the shelter and household operation components, respectively. The shelter rise reflected a 0.7 % increase in the homeownership element. The main factor in the household operation advance was a 3.9 % increase in the fuel and lighting index which resulted from higher prices for electricity, in Toronto, Hamilton, Sault Ste. Marie and Calgary, for domestic gas in Calgary and Vancouver, and for fuel oil in a number of cities across the country. Furniture prices rose 0.4 % mainly because of increased quotations for bedroom suites and kitchen

L'indice des prix à la consommation pour le Canada (1961=100) a progressé de 0.8 %, passant de 143.3 en décembre à 144.5 en janvier. Il faut remonter avant 1961 pour trouver une hausse aussi élevée; l'augmentation moyenne observée entre ces deux mois au cours des cinq dernières années a été de 0.3 %. L'augmentation de 2.0 % du prix des aliments constitue le principal facteur de l'avance de janvier. Le niveau des prix de tous les éléments autres que l'alimentation a augmenté de 0.4 %, en raison surtout d'une augmentation de 0.8 % de l'indice de l'habitation. Les autres éléments qui ont enregistré des augmentations ont été les tabacs et les alcools (0.4 %), les soins personnels et de santé (0.1 %), les loisirs et la lecture (0.1 %). Par contre, les prix de l'habillement ont diminué de 0.3 % et l'indice des transports, de 0.1 %. Entre janvier 1972 et janvier 1973, l'indice synthétique a progressé de 5.7 %.

L'indice de l'alimentation a augmenté de 2.0 %, passant de 147.1 en décembre à 150.0 en janvier; il faut remonter avant 1961 pour trouver une augmentation aussi élevée. Au cours du mois dernier, le prix des repas dans les restaurants s'est accru de 1.1 % par suite des augmentations enregistrées dans de nombreuses villes au Canada. Le niveau des prix des aliments consommés à la maison a avancé de 2.1 %, en raison surtout de l'augmentation du prix du boeuf, du porc, des oeufs, des légumes frais et du lait, même si tous les autres aliments ont aussi augmenté. Au cours du mois dernier, l'indice de la viande, du poisson et de la volaille a progressé de 3.4 %. Les prix du boeuf et du porc ont augmenté respectivement de 5.8 % et 2.7 %, tous les morceaux contribuant à cette progression. L'indice de la volaille a augmenté de 0.8 %, l'augmentation des prix du poulet l'ayant emporté sur la diminution du prix de la dinde. Depuis janvier 1972, l'indice de la viande, du poisson et de la volaille a progressé de plus de 15 %, le prix du porc augmentant, en moyenne, de plus de 28 %. Entre décembre et janvier, le prix des oeufs a progressé de 7.8 % pour atteindre un niveau de 20 % supérieur à celui de l'année dernière. Au cours du mois dernier, l'indice des légumes s'est accru de 5.4 % par suite de la hausse du prix de la plupart des légumes frais, congelés et en boîte. Le prix des fruits a augmenté en moyenne de 2.0 %, l'augmentation du prix de certains fruits frais, congelés et en boîte étant partiellement compensée par une diminution du prix d'autres fruits. Depuis janvier 1972, l'indice des légumes a progressé de plus de 16 %, et celui des fruits, de 11 %. Entre décembre et janvier, des augmentations de prix ont été enregistrées pour la plupart des produits laitiers. Le prix du lait nature s'est accru de 3.1 %, par suite des augmentations enregistrées dans la plupart des villes de l'Ontario ainsi qu'à Saint-Jean (T.-N.), à Calgary et à Edmonton. L'indice des produits céréaliers et de boulangerie a augmenté de 0.4 %, la plupart des articles observés (y compris le pain, les flocons de maïs et les mélanges à gâteaux) ayant augmenté. Parmi les autres denrées alimentaires, on a observé des diminutions de prix pour le café moulu et le beurre d'arachides, ces produits étant vendus à des prix spéciaux dans quelques villes; le prix de la soupe, des aliments pour bébés et du sucre a aussi diminué. Toutefois, le prix des boissons gazeuses, de la poudre à gelées, des confitures, du thé et du café soluble a également augmenté. Depuis janvier 1972, l'indice de l'alimentation a progressé de 10.0 %, le prix des aliments consommés à la maison augmentant de 10.3 % et celui des repas pris au restaurant de 1.8 %.

L'indice de l'habitation a avancé de 0.8 %, passant de 146.8 en décembre à 148.0 en janvier, en raison de l'augmentation respective de 0.5 % et 1.5 % de l'élément logement et de l'élément entretien de l'habitation. La hausse de l'élément logement est en partie attribuable à une augmentation de 0.7 % des frais de possession d'une maison. Le principal facteur de l'augmentation de l'entretien de l'habitation est la hausse de 3.9 % de l'indice du combustible et de l'éclairage qui est elle-même attribuable à une hausse des prix de l'électricité à Toronto, à Hamilton, à Sault-Sainte-Marie et du gaz à Calgary et Vancouver, et du mazout dans un certain nombre de villes. Le prix des meubles a progressé de 0.4 %, par suite surtout de l'augmentation du prix des ameublements

sets, and carpet prices moved up 0.3 %. Among other household operation items, prices for dishes, detergent, bleach and floor wax, and wages for household help increased in a number of cities. Between January 1972 and January 1973, the Housing index advanced 5.3 %.

The Clothing index decreased 0.3 % to 134.7 in January from 135.1 in December, which compares with declines of 0.7 % between these two months in each of the preceding three years. The decrease in the latest month was mainly attributable to seasonal sales on a number of items. A 0.9 % decrease in the women's wear index was caused by sales on coats, woollen dresses and undergarments, and a 1.1 % fall in the children's wear component mostly resulted from sales on boys' parkas, slacks and sport shirts and girls' winter coats, snowsuits and sweaters. In contrast, the men's wear index was unchanged as lower prices for overcoats, ski parkas, business shirts and slacks were offset by higher quotations for most other items, particularly sport shirts, socks and underwear. Prices of footwear and piece goods each rose 0.4 %, the former as higher quotations for men's and women's street shoes outweighed reductions for women's snowboots, the latter mainly because of higher prices for woollen dress material. In the twelve months since January 1972, the Clothing index rose 3.5 %.

The Transportation index declined 0.1 % to 133.3 in January from 133.4 in December as a decline in the local transportation element outweighed an increase in the automobile operation component and a seasonal advance in the train fares index. The local transportation index decreased 2.3 % because an effective local transit fare reduction in Toronto, as a result of the abolition of zone fares, outweighed some higher local bus fares in Quebec City. A 0.3 % rise in the automobile operation component was mainly attributable to higher new car prices, though there were scattered increases in gasoline and motor oil quotations and automobile repair charges rose in St. John's. Between January 1972 and January 1973, the Transportation index rose 0.8 %.

The Health and Personal Care index rose 0.1 % to 151.9 in January from 151.8 in December mainly because of the removal of earlier sale prices on cleansing tissues, razor blades, toilet soap and shaving cream; toothpaste prices were lower due to sales. In January 1973, the Health and Personal Care index stood 3.8 % above its level of twelve months earlier.

The Recreation and Reading index edged up 0.1 % to 141.5 in January from 141.4 in December as a result of higher newspaper subscription rates in Charlottetown and Trois Rivières. In the twelve months to January 1973, the Recreation and Reading index advanced 3.7 %.

The Tobacco and Alcohol index rose 0.4 % to 135.3 in January from 134.7 in December because of 0.9 % higher alcoholic beverage prices which reflected some increased beer quotations in Quebec and Alberta together with higher liquor prices in Newfoundland, Alberta and British Columbia. Since January 1972, the Tobacco and Alcohol index increased 4.3 %.

Consumer price index items, when classified by commodities and services, offer another view of the incidence of the change in prices. In the latest month, the services index rose 0.3 % mainly as a result of higher charges for shelter services together with increased wages for household help. On the other hand, the commodities index advanced 1.1 %, mostly because

de chambres à coucher et des meubles de cuisine, et le prix des tapis a augmenté de 0.3 %. Parmi les autres articles qui entrent dans l'entretien du ménage, on a enregistré une augmentation du prix de la vaisselle, des détersifs, des agents de blanchiment et de la cire à plancher, et une augmentation des gages versés aux aides domestiques dans un certain nombre de villes. Entre janvier 1972 et janvier 1973, l'indice de l'habitation a avancé de 5.3 %.

L'indice de l'habillement a diminué de 0.3 %, passant de 135.1 en décembre à 134.7 en janvier; la diminution enregistrée entre ces deux mois pour chacune des trois années précédentes a été de 0.7 %. La diminution du mois dernier est surtout attribuable aux soldes saisonniers d'un certain nombre d'articles. La diminution de 0.9 % de l'indice des vêtements pour femmes est attribuable à des soldes de manteaux, de robes et de sous-vêtements de laine, et à une baisse de 1.1 % des vêtements pour enfants par suite surtout des soldes d'anoraks, de pantalons et des chemises sport pour garçonnets, et de manteaux d'hiver, de costumes d'hiver et de chandails pour fillettes. Par contre, l'indice des vêtements pour homme est demeuré stable alors qu'une baisse du prix des paletots, des anoraks de ski, des chemises de ville et des pantalons a été contrebalancée par une augmentation du prix de la plupart des autres articles, surtout des chemises sport, des chaussettes et des sous-vêtements. Le prix des chaussures a augmenté de 0.4 % en raison du fait que l'augmentation du prix des chaussures de ville pour hommes et pour femmes a été supérieure à la réduction du prix des bottes d'hiver pour femmes; le prix du tissu à la verge a également augmenté, de 0.4 % par suite surtout de l'augmentation du prix du tissu en laine pour les robes. Au cours des douze mois depuis janvier 1972, l'indice de l'habillement a progressé de 3.5 %.

L'indice des transports a diminué de 0.1 %, passant de 133.4 en décembre à 133.3 en janvier; cette diminution est attribuable au fait que la baisse de l'élément transports urbains l'a emporté sur l'augmentation de l'élément frais d'autobus et sur la hausse saisonnière du prix des billets de train. L'indice des transports urbains a diminué de 2.3 % par suite d'une réduction réelle du prix du transport urbain à Toronto, résultant de l'abolition du tarif de zone; cette baisse a été supérieure à une légère augmentation du prix des billets d'autobus à Québec. La hausse de 0.3 % des frais d'autobus est surtout attribuable à l'augmentation du prix des voitures neuves, même s'il y a eu diverses augmentations du prix de l'essence et de l'huile à moteur, et une hausse des frais de réparation des automobiles à Saint-Jean (T.-N.). Entre janvier 1972 et janvier 1973, l'indice des transports s'est accru de 0.8 %.

L'indice des soins personnels et de santé a augmenté de 0.1 %, passant de 151.8 en décembre à 151.9 en janvier, surtout en raison de la fin des soldes du papier à démaquiller, des lames de rasoir, du savon de toilette et de la crème à raser; le prix de la pâte dentifrice était moins élevé en raison des soldes. En janvier 1973, l'indice des soins personnels et de santé s'établissait à 3.8 % au-dessus du niveau de janvier 1972.

L'indice des loisirs et de la lecture a avancé de 0.1 %, passant de 141.4 en décembre à 141.5 en janvier, par suite de l'augmentation des frais d'abonnement aux journaux à Charlottetown et à Trois-Rivières. De janvier 1972 à janvier 1973, l'indice des loisirs et de la lecture a progressé de 3.7 %.

L'indice des tabacs et alcools a augmenté de 0.4 %, passant de 134.7 en décembre à 135.3 en janvier, à cause de l'augmentation du prix des boissons alcooliques, augmentation attribuable à la hausse du prix de la bière au Québec et en Alberta de même qu'à la hausse du prix des boissons alcooliques à Terre-Neuve, en Alberta et en Colombie-Britannique. Depuis janvier 1972, l'indice des tabacs et alcools a progressé de 4.3 %.

Les différentes composantes de l'indice des prix à la consommation, si on les classe par biens et services, présentent un autre aspect de la variation des prix. Au cours du mois dernier, l'indice des services a augmenté de 0.3 % surtout en raison de l'augmentation des frais des services de logement, et de la hausse des gages versés aux aides domestiques. Par contre, l'indice des biens a avancé de 1.1 %, surtout en raison

of the 2.0 % increase in food prices. The component for non-durables other than food rose 0.5 % as higher prices for footwear, alcoholic beverages, fuel, electricity and some toiletries and cleaning supplies outweighed reductions for textiles. A 0.4 % increase in durables prices resulted from higher prices for new cars, furniture and carpets. In the twelve months to January 1973, the total commodities index advanced .8 %, and the services component increased 5.4 %.

de l'augmentation de 2.0 % du prix des aliments. L'élément biens non durables (sauf les aliments) a augmenté de 0.5 %, la hausse du prix des chaussures, des boissons alcooliques, du combustible, de l'électricité, de quelques articles de toilette et de quelques produits d'entretien ménager étant supérieure à la baisse des textiles. La hausse de 0.4 % du prix des biens durables est attribuable à une augmentation du prix des voitures neuves, des meubles et des tapis. De janvier 1972 à janvier 1973, l'indice total des biens a progressé de 5.8 % et celui des services, de 5.4 %.

- (1) Indexes for 1972 and 1973 are subject to revision. - Les indices pour 1972 et 1973 sont sujets à révision.  
 (2) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series	New series
	Ancienne série	Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.

Cheese, plain, processed - Fromage ordinaire fondu .....	147.8	148.2	147.3	145.9	148.2	133.4	130.3
<b>Poultry and eggs - Volaille et oeufs</b>							
Chicken, grade A evisc. - Poulet, qualité A, éviscéré .....	136.9	135.3	118.9	114.4	128.9	112.0	107.7
Turkey, grade A evisc. - Dinde, qualité A, éviscérée .....	112.3	114.1	96.7	95.2	105.4	95.8	99.1
Eggs, fresh, grade A large - Oeufs frais, qualité A gros .....	120.7	112.0	100.0	96.7	94.7	87.3	99.0
Eggs, fresh, grade A medium - Oeufs frais, qualité A moyens .....	131.4	119.8	103.6	99.0	97.3	86.8	98.6
<b>Beef - Boeuf</b>							
Sirloin steak - Bifteck de faux filet .....	158.2	148.0	149.4	145.3	152.4	143.4	139.7
Round steak - Bifteck dans la ronde .....	174.4	163.6	159.0	152.6	160.4	148.0	143.7
Prime rib roast(1) - Rôti de plat de côtes(1)	161.4	154.5	150.6	146.0	154.3	139.9	134.4
Blade roast(2) - Rôti de haut-côte(2) .....	159.6	149.4	143.8	139.7	148.9	133.1	133.5
Stewing beef - Boeuf pour ragout .....	165.3	157.5	152.4	149.2	157.3	145.9	142.1
Hamburg - Boeuf hache .....	186.2	181.8	160.2	155.0	170.4	148.5	144.8
Liver, sliced - Foie en tranches .....	139.9	139.0	118.0	120.2	134.8	119.1	132.3
<b>Pork - Porc</b>							
Chops, fresh - Côtelettes fraîches .....	170.9	163.1	130.2	132.7	153.0	122.7	137.2
Butt roast, fresh - Rôti de soc, frais .....	145.0	135.6	109.9	106.9	128.0	102.4	120.5
Sausage, pure pork - Saucisse pur porc .....	141.7	139.6	119.3	119.6	130.9	119.6	127.2
Bacon, side, fancy, sliced, rind off(3) - Bacon, flanc, de fantaisie, en tranches, sans couenne(3) .....	112.4	110.8	77.2	75.7	99.6	76.4	102.2
Ham, smoked, boneless(4) - Jambon fumé, desosse(4) .....	147.4	146.8	125.9	118.0	137.6	115.4	135.2
<b>Other meat - Autres viandes</b>							
Lamb, leg roast - Agneau, gigot .....	132.0	128.0	116.3	115.0	122.1	113.7	114.8
Veal - Veau .....	206.8	205.0	171.3	166.8	189.9	165.0	162.6
Wieners - Saucisses de Francfort .....	133.8	130.4	121.5	118.9	127.8	119.0	121.5
Meat loaf, canned, mainly pork - Pain de viande, en conserve, principalement de porc	128.6	127.7	122.1	121.4	123.3	123.0	130.7
<b>Fish - Poisson</b>							
Cod filets, frozen(5) - Filets de morue, congelés(5) .....	228.5	229.0	196.3	180.0	210.8	160.6	143.3
Salmon, canned - Saumon, en boîte .....	157.1	156.2	146.9	146.5	149.0	143.0	144.1
<b>Fats and oils - Huiles et corps gras</b>							
Margarine .....	110.4	110.4	112.1	111.8	110.5	114.8	112.1
Lard, pure - Saindoux pur .....	125.5	123.5	115.5	113.7	118.7	111.4	118.7
Shortening .....	122.8	119.2	120.3	120.2	121.8	118.7	114.1
Salad dressing - Vinaigrette .....	111.2	111.1	106.7	107.9	109.9	105.4	104.7
<b>Cereals and bakery products - Céréales et produits de la boulangerie</b>							
Flour, white, all purpose - Farine blanche, tout usage .....	136.0	135.8	131.9	130.2	134.9	131.3	133.5
Corn flakes(6) - Flocons de maïs(6) .....	128.8	127.9	124.3	123.6	123.4	119.6	117.4
Macaroni - Macaronis secs .....	129.0	128.4	126.9	127.1	127.2	126.0	126.4
Cake mix, white - Mélange à gâteaux, blanc ...	127.1	125.9	124.5	123.1	124.6	118.5	122.1

Pickles, sweet, mixed - Cornichons sucrés variés .....	137.0	135.0	130.1	128.8	133.1	127.7	125.3
Jelly powders, flavoured - Gelée en poudre aromatisée .....	131.5	129.7	126.7	121.3	127.7	121.5	118.0

(1) Includes cuts with bone-in and boned and rolled. - Y compris les morceaux avec os, sans os et roulés.  
(2) Includes cuts with blade-in and blade removed. - Y compris les morceaux avec ou sans palette.

(3) 1965=100. - 100 en 1965.

(4) Indexes based on chain store prices in 7 cities. - Les indices sont fondés sur les prix dans les magasins à succursales multiples de 7 villes.

(5) Indexes based on prices in 16 cities. - Les indices sont fondés sur les prix dans 16 villes.

(6) 1963=100. - 100 en 1963.

(7) Indexes based on prices for pectin and pure jam combined. - Les indices sont basés sur les prix de la confiture avec pectine et de la confiture pure.

(8) June 1968=100. - 100 en juin 1968.

TABLE 11. Consumer Price Indexes, Regional Cities, 1962-73(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines, 1962-73(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) For explanation see page 88. - Pour de plus amples explications, voir la page 88.

(2) The shelter element of regional cities housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and homeownership costs. See also page 88. - Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir la page 88.

(3) Includes shelter and household operation. The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home-ownership costs. See also page 88. — Comprend le logement et l'entretien du ménage. Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir aussi la page 88.

Indexes for 1972 and 1973 are subject to revision. - Les indices pour 1972 et 1973 sont sujets à révision.

6 3) From Tables 18 and 19. - Provenant des Tableaux 18 et 19.

Weights used to combine wage rate series. - Coefficients de pondération utilisés pour réunir les séries sur les taux de rémunération:

(Source: Dept. of Labour

(Source: Ministère  
du Travail)

Labourer - Ouvrier .....	46
Carpenter - Menuisier-charpentier .....	30
Painter - Peintre .....	7
Electrician - Electricien .....	5
Plumber - Plombier .....	5
Bricklayer and Mason - Briqueur et maçon .....	3
Sheet Metal Worker - Ferblantier .....	2
Truck Driver - Conducteur de camion .....	2
Total .....	100

Implicit weights of the 1961=100 arithmetically converted indexes, materials 51.9, wages 48.1. - Coefficients implicites de Pondération obtenus par conversion arithmétique à 1961=100, matériaux 51.9, main-d'oeuvre 48.1.

Implicit weights materials 55.1, wages 44.9. - Coefficients implicites de Pondération, matériaux 55.1, main-d'oeuvre 44.9.

8) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No 13-001 au catalogue, trimestriel).

This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

For further detailed explanation see Prices and Price Indexes - May 1970. - Four des explications détaillées voir Prix et indices des prix - Mai 1970.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Industrial Price Indexes

Indices des prix industriels

Industry Selling Price Indexes (1961=100)

Indices des prix de vente dans l'industrie (1961=100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Industry Selling Price Index: Manufacturing

Indices des prix de vente dans l'industrie: Industries manufacturières

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight in part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix des livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

Purchase Price Indexes of Secondary Metals  
(1969=100)

Indices du prix d'achat des métaux de deuxième fusion  
(1969=100)

Ferrous and non-ferrous indexes are compiled from series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Canadian Farm Products Price Index (1935-39=100)

Indice des prix des produits agricoles canadiens (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1, 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14 % at Thunder Bay. Prices for Western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised as further payments are announced.

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. A compter du 1<sup>er</sup> août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14 %) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Final payments for the crop year August 1970 - July 1971 were announced on February 11, 1972 for wheat, and on June 21, 1972 for oats. No final payment was announced for barley for the 1970-71 crop year, however, the initial payment was increased by 10¢ on February 11, 1971.

Les prix définitifs pour la campagne allant d'août 1970 à juillet 1971 ont été annoncés le 11 février 1972 en ce qui concerne le blé et le 21 juin 1972, en ce qui concerne l'avoine. Il n'y a pas eu de dernier paiement pour l'orge en 1970-1971; toutefois, le paiement initial a été majoré de 10 cents le 25 février 1971.

 (4) Used in current indexes. — Utilisé dans les indices courantes.

#### General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things

#### Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte des transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En

are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials,  
1935-39 = 100

The price index of thirty industrial materials is calculated as an unweighted geometric average prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{P_{t \ 35-39}^1 \times P_{t \ 35-39}^2 \times P_{t \ 35-39}^3 \times \dots \times P_{t \ 35-39}^{30}}$$

The selection of materials for pricing related to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We want to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyres type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter Wholesale Price Indexes 1913-50 (Reference Paper No. 24) et Prices and Price Indexes 1949-52 (Vol. 23) (n° 62-501 au catalogue).

Indice des prix de trente matières industrielles  
(1939-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{P_{t \ 35-39}^1 \times P_{t \ 35-39}^2 \times P_{t \ 35-39}^3 \times \dots \times P_{t \ 35-39}^{30}}$$

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

## Retail Price Indexes

### Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services of items for which there is a continually measurable market price over time, corresponding to a specific quantity of the item.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index is unlikely to represent closely the experience of any one family within the group nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families - (a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In 1952, the time base was updated to 1949=100 from 1935-39=100 and, at the same time, weights were revised to reflect family expenditure patterns in 1947-48. A subsequent revision of weights based on 1957 expenditures was introduced at the beginning of 1961 and the time base was revised from 1949=100 to 1961=100 at the beginning of 1969.

Full details on the latest weighting patterns and time base revisions are available in the occasional paper "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures", Statistics Canada Catalogue No. 62-518 and in the January 1969 issue of the monthly bulletin, Prices and Price Indexes, Catalogue No. 62-002.

### Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). The regional indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada except for their individual weighting systems.

Also, city indexes are not as comprehensive in price content as the Canada consumer price index and may underestimate slightly the degree of price movements occurring. In this connection, the shelter component of the city indexes moves on the basis of changes in rents only, whereas changes in both rents and homeownership costs are included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and all-items indexes for cities have tended to underestimate somewhat the rates of price increase, particularly over longer periods. Studies are under way to incorporate homeownership prices in city indexes.

Each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

## Indices des prix de détail

### Indice des prix à la consommation au Canada (1961=100)

L'indice des prix à la consommation sert à mesurer le taux de variation du prix qu'il en coûte pour acheter un "panier" de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" demeure le même; il équivaut tout au moins à une quantité égale de biens et services de qualité égale; de plus, il est constitué de produits pour lesquels on peut toujours trouver sur le marché un prix mesurable et correspondant à une quantité déterminée de ce produit.

L'indice porte sur un groupe étendu mais bien déterminé de familles urbaines et rend compte des variations des prix auxquelles l'échantillon en question a dû faire face. Il est fort peu probable que l'indice représente fidèlement l'expérience d'une famille en particulier; de même, il ne faut pas s'attendre à ce qu'il rende compte des variations des prix auxquelles ont fait face des groupes sensiblement différents par le revenu, la taille de la famille et le lieu de résidence. L'échantillon sur lequel porte l'indice est composé de familles - a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille oscille entre deux adultes et deux adultes avec quatre enfants et c) dont le revenu annuel en 1957 oscillait entre \$2,500 et \$7,000. Pour évaluer l'influence des variations de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation porte sur les variations d'environ 300 articles.

L'indice des prix à la consommation au Canada remonte au début du siècle; depuis lors, on a révisé périodiquement la période de référence et les schémas de pondération. Ainsi, en 1952, la période de référence est passée de 1935-1939=100 à 1949=100; à la même occasion, les poids ont été revus de façon à présenter un reflet de la structure des dépenses des familles en 1947-48. La révision suivante des facteurs de pondération était fondée sur les dépenses des consommateurs en 1957 et fut introduite au début de 1961. Enfin, c'est au début de 1969 qu'on porta la période de 1949=100 à 1961=100.

Le lecteur trouvera de plus amples renseignements sur les dernières révisions du schéma de pondération et de la période de référence dans la publication occasionnelle "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures" (n° 62-518) et dans la livraison de janvier 1969 du bulletin mensuel "Prices and Price Indexes" (n° 62-002).

### Indices des prix à la consommation dans certaines agglomérations urbaines (1961=100)

Ces indices sont publiés mensuellement dans le présent bulletin (voir Tableau 11). Par leur conception et par les éléments qui les composent, ces indices sont en général similaires à l'indice des prix à la consommation au Canada, seuls leurs coefficients de pondération diffèrent.

Aussi, les indices de prix dans les villes ne représentent pas les prix de façon aussi complète que l'indice des prix à la consommation au Canada et ils peuvent sous-estimer légèrement l'importance des mouvements de prix. C'est ainsi que l'élément "logement" des indices des villes varie en fonction des changements dans les loyers uniquement, alors que l'indice pour l'ensemble du Canada comprend les loyers et les coûts de propriété. A la suite d'une augmentation des coûts de propriété plus rapide que celle des loyers, les indices de l'habitation et de tous les éléments pour les villes ont tendu à sous-estimer quelque peu les taux de croissance des prix, surtout sur de plus longues périodes de temps. On étudie actuellement l'incorporation des prix de propriété dans les indices des villes.

Chaque indice est conçu de façon à mesurer les conséquences des variations des prix de détail survenues dans les agglomérations en question sur le prix d'un panier constant de biens et de services représentant la consommation d'un groupe représentatif de familles appartenant à ces secteurs.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another.

For comparisons of retail price differentials between cities see Table 14 of this publication and the relevant explanatory note.

Historical Consumer Price Indexes (1969=100) for Thunder Bay and "Quebec City" are available, with explanatory notes on request from Retail Prices Section, Statistics Canada.

### Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by re-indexing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the same amount if price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings at different consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 % rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25 % rise from \$80.00 to \$100.00 overstates the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price increase. The adjusted average is \$90.91 ( $100.0/110.0 \times \$100.$ ), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as equal to 100.0, the week B index becomes 113.6 ( $90.91/80.0 \times 100.0$ ). Such an index may be called an index of real wages. It indicates that average wages for week B will buy 13.6 % more goods and services than were received in week A, in spite of a 10 % rise in consumer prices. This 13.6 % increase in real wages compares with the rise of 25 % in money wages ( $100.00/80.0 \times 100.0$ ).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending on occupation, industry, geographical location, or type of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered

Le lecteur devra toujours garder en mémoire que ces indices ne sont pas des indicateurs qui permettent de comparer le niveau des prix d'une ville à l'autre et qu'ils n'indiquent en aucune façon si les prix sont plus ou moins élevés dans une ville que dans une autre.

Pour étudier les différences de prix au détail entre les villes, il faut consulter le Tableau 14 de ce bulletin et les notes explicatives qui l'accompagnent.

Les indices chronologiques des prix à la consommation (1969=100) pour Québec et Thunder Bay et les notes explicatives qui les accompagnent peuvent être obtenus de la Section des prix de détail de la Division des prix de Statistique Canada.

### Calcul du pouvoir d'achat

Toute variation des prix à la consommation influe directement sur la quantité de biens et de services qu'on peut acheter avec un dollar et par conséquent sur le revenu moyen. Pour mesurer le revenu en tenant compte de la variation des prix à la consommation, on peut déduire du revenu moyen réel le montant proportionnel qui correspond à l'augmentation des prix à la consommation ou ajouter au revenu réel le montant qui équivaut à la diminution des prix à la consommation. Ces moyennes corrigées peuvent ensuite servir à déterminer la quantité de biens et de services qu'on aurait pu acheter grâce à un revenu moyen, les prix à la consommation et les habitudes de consommation n'ayant pas changé. On trouvera ci-dessous des exemples de cette méthode.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B et que dans la même période de temps l'indice des prix à la consommation progresse de 100.0 à 110.0. En raison de l'augmentation de 10 % des prix à la consommation, on n'obtiendra plus autant avec \$1 au cours de la semaine B que pendant la semaine A. De même il serait exagéré de dire que, pour une augmentation de la rémunération de \$80 à \$100 le pouvoir d'achat du salaire hebdomadaire moyen s'est élevé de 25 %. On peut ramener cette augmentation à des proportions plus justes en déduisant du nouveau salaire hebdomadaire moyen l'augmentation des prix à la consommation. La rémunération moyenne corrigée s'établira donc à \$90.91 ( $100.0/110.0 \times \$100.$ ), dont on peut dire qu'elle exprime la rémunération hebdomadaire moyenne de la semaine B en dollars de la semaine A, ou encore qu'elle rend compte du niveau effectif de la rémunération hebdomadaire de la semaine B par rapport à la semaine A.

On peut pousser plus loin les calculs et exprimer à l'aide d'un indice la relation entre le salaire moyen de la semaine A (\$80) et celui de la semaine B (\$90.91). Ainsi, si l'on considère que la rémunération moyenne de \$80 de la semaine A était égale à 100.0, l'indice de la semaine B deviendra 113.6 ( $90.91/80.0 \times 100.0$ ). On pourrait appeler cet indice l'indice de la rémunération hebdomadaire effective; il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6 % de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10 % des prix à la consommation. L'augmentation de 25 % des salaires se ramène donc à une augmentation effective de 13.6 % ( $100.0/80.0 \times 100.0$ ).

Il convient de souligner que, même si les estimations de la rémunération moyenne effective résument assez bien la situation d'un large éventail de travailleurs, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur le revenu porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur le revenu ajustées par l'indice des prix à la consommation (les habitudes de consommation étant "fixes") perdront graduellement de leur

less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.

#### Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned.) While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of Prices and Price indexes (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were

valeur. Enfin, il ne faut pas oublier qu'une partie du revenu peut être consacrée à l'épargne et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations du revenu effectif calculées à partir de moyennes du revenu brut peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés et de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente la rémunération tant réelle qu'effective prend pour base l'année 1961. Toutefois, les ajustements illustrés dans les exemples ci-dessus peuvent s'appliquer à tout niveau de référence; la variation proportionnelle entre deux périodes sera en effet identique quelle que soit la période de référence choisie.

#### Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix aux quels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de Prices and Price Indexes (n° 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves, pour lesquelles les dif-

derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level are aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

It should be noted that the retail prices used in these comparisons, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

#### Farm Input Price Indexes (1961=100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961=100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services used by Farmers, 1935-39=100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, Farm Input Price Indexes, 1961=100, Catalogue No. 62-534, and is reproduced in the September 1971 issue of Prices and Price Indexes, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, Farm Input Price Indexes, 1961=100, Catalogue No. 62-004, and in the monthly publication Prices and Price Indexes, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

Différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

#### Indices de prix des entrées dans l'agriculture (1961=100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961=100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39=100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série Farm Input Price Indexes, 1961=100 (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans Prices and Price Indexes de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel Farm Input Price Indexes, 1961=100 (n° 62-004) et dans le bulletin annuel Prices and Price Indexes (n° 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de le publier.

## Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the Globe and Mail and the Montreal Gazette. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of prices in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Investors Index and Preferred Index, see Prices and Price Indexes for February 1972.

### Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of Prices and Price Indexes, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators<sup>(1)</sup> providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

(1) National Income and Expenditure Division, Statistics Canada.

## Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placeur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture de la Bourse du jeudi indiqués dans le Globe and Mail et dans la Montreal Gazette. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base de 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâtes et papiers, et huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipe-lines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans Prix et indices des prix de février 1972.

### Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans Prices and Price Indexes de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement<sup>(1)</sup> des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

(1) Division du revenu national et de la défense nationale, Statistique Canada.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. In 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on the rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961=100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users are to provide their own weights for the components and recombine the components to suit their particular needs.

#### Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived from the Construction Collective Agreement Survey provided by the Canadian Construction Association. These rates are supplemented as necessary by rates of some union locals. While indexes containing supplementary benefits will be available soon, present published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. These union workers in cities tend to be engaged primarily in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample, these indexes best approximate wage rate change for non-residential construction.

#### Highway Construction Price Indexes (1961=100)(3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments on contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1961=100 time base. Users are warned that an

#### Industry Selling Price Indexes 1956-1968 Cat. 62-528.

The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.(2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961=100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

#### Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication Prix et indices des prix (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service Statistique des prix dans la construction (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication Construction Collective Agreement Survey de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

#### Indices des prix de la construction routière (1961=100)(3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961=100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956=100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices

(2) Indices des prix de vente dans l'industrie, 1956-1968, n° 62-528 au catalogue.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période du 1<sup>er</sup> avril 1968 au 31 mars 1969.

aggregation of the converted major group indexes with the published weights will not yield the published 1961=100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to his own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of Prices and Price Indexes, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

#### Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

convertis des grands groupes et des pondérations publiées dans l'indice général publié (1961=100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de Prices and Price Indexes (n° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé Price Indexes of Highway Construction in Canada (n° 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectuée comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix de travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix des matériaux fournis sont les prix payés par les ministères aux fournisseurs.

#### Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'œuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for persons wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. As the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526, Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because individual construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units in terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities are a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by electric utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. Components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - line-men and groundmen. Costs relating to construction equipment such as trucks, and components of equipment relating costs such as tires, gasoline and repairs are also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land rights-of-way have been excluded.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se reporter aux Sections III et XI de la publication Price Indexes of Electrical Utility Construction (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité des fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation de réseaux de distribution, de lignes de transport d'énergie, de postes de transformation ou de postes de manoeuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses en main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manoeuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

#### Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation, permanent houses, etc.

#### Price Indexes of Machinery & Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

#### Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice des centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériel et de location de matériel pour la production de béton, des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fournitures et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

#### Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente des fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En

eliminary indexes for a number of other industries  
e available on request. Certain commodity indexes  
ich exclude adjustments for exchange, duty and  
ederal sales tax can also be provided on request.

attendant, on peut obtenir sur demande les indices préliminai-  
res pour un certain nombre d'autres industries. Il en est de  
même pour certains indices de prix des marchandises, compte non  
tenu des ajustements pour le change, les droits de douane et  
la taxe de vente fédérale.

# NOTES ON PRICES AND PRICE INDEX NUMBERS

## Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) moved 1.1 % higher in February to 134.2 from the January index of 132.8. It was 7.1 % higher than the February 1972 index of 125.3. Of the 101 industry indexes included in the Total, 58 were higher, 14 declined and 29 were unchanged.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were increases recorded in the foods and beverages group, particularly for the slaughtering and meat packing, feed manufacturers and vegetable oil mills industries. The wood products group continued its upward trend in February in response to higher prices recorded in the sawmills and planing mills, and veneer and plywood mills industries. Advances in the primary metals group reflected price increases in the smelting and refining, and in the copper and alloy, rolling, casting and extruding industries. The rubber products group declined in February on lower prices registered in the tire and tube manufacturers industry.

# NOTES SUR LES PRIX ET LES INDICES DE PRIX

## Indice des prix de vente dans l'industrie: Industries manufacturières (1961=100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières a augmenté de 1.1 % en février, passant de 132.8 en janvier à 134.2. Il a dépassé de 7.1 % l'indice de février 1972 (125.3). Sur les 101 industries comprises dans le total, les indices de 58 industries ont augmenté, ceux de 14 industries ont baissé et ils sont restés inchangés dans le cas de 29 autres.

Pour ce qui est de l'importance relative de chaque industrie au sein des industries manufacturières, les changements les plus appréciables ont été les augmentations observées dans le groupe des aliments et boissons, principalement en ce qui concerne l'abattage et le conditionnement de la viande, les fabricants d'aliments pour animaux et les fabriques d'huile végétale. Le groupe des produits du bois a continué de progresser en février, par suite d'une hausse des prix dans les scieries et les fabriques de placages et contre-plaqués. Les augmentations dans le groupe des métaux primaires reflètent la hausse des prix dans la fonte et l'affinage et dans le laminage, moulage et extrusion du cuivre et ses alliages. Le groupe des produits du caoutchouc a baissé en février par suite d'une diminution des prix chez les fabricants de pneus et de chambres à air.

# General Wholesale Index (1935-39=100)

The general wholesale price index rose 1.9 % in February to 342.9 from the revised January index of 336.4. It was 13.6 % higher than the February 1972 index of 301.8. All eight major group indexes were higher.

The non-ferrous metals products group index rose 3.7 % in February to 288.7 from 278.4 on higher prices for silver, tin, copper and its products and lead. An advance of 3.2 % to 416.5 from 403.7 in the animal products group index reflected price increase for livestock, fresh and cured meats, and hides and skins. Higher prices for fir, hardwoods, hemlock and newsprint were chiefly responsible for a rise of 2.4 % to 489.3 from 477.9 in the wood products group index. An advance of 1.5 % to 296.4 from 292.0 in the textile products group index reflected price increases for imported raw wool, miscellaneous cotton products and worsted and wool cloth. The iron products group index moved 1.2 % higher to 342.9 from 338.8 on higher prices for scrap and pig iron. An increase of 1.0 % to 291.3 from 288.4 occurred in the vegetable products group index on higher prices for livestock and poultry feeds, fresh and dried fruits and grains. Fractionally higher price movements were recorded in the non-metallic minerals group index to 241.5 from 241.1 and in the chemical products group to 250.4 from 250.1

The General Wholesale Index, which advanced 13.6 % from February 1972, contains relatively few final product price indexes for commodities such as consumer durable goods, whose prices have changed little during the past year. The Industry Selling Price Index for Manufacturing, which advanced 7.1 % during the same period, does include such products.

The following table lists the Total Index and component groupings for specified dates:

	Feb.*	Jan.*	Feb.	Jan.	% Change	
	1973	1973	1972	1972

These indexes are preliminary.

# Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 1.9 % en février, passant de 336.4 en janvier à 342.9. Il dépassait de 13.6 % l'indice de février 1972 (301.8). Les huit principaux groupes ont augmenté.

L'indice du groupe des produits métalliques non ferreux a augmenté de 3.7 %, passant de 278.4 à 288.7, à la suite d'une hausse des prix de l'argent, de l'étain, du cuivre et de ses produits, et du plomb. L'accroissement de 3.2 % de l'indice du groupe des produits d'origine animale, qui passe de 403.7 à 416.5, s'explique par une hausse des prix du bétail, des viandes fraîches et traitées et des peaux et cuirs. La hausse des prix du sapin, des bois durs, de la pruche et du papier journal est la principale cause d'une progression de 2.4 % de l'indice des produits du bois, qui passe de 477.9 à 489.3. L'augmentation de 1.5 %, (292.0 à 296.4) de l'indice du groupe des produits textiles s'explique par la hausse des prix de la laine brute importée, des produits divers en coton, ainsi que des vêtements en worsted et en laine. Le groupe des produits du fer a augmenté de 1.2 %, passant de 338.8 à 342.9 à la suite d'une hausse des prix des déchets et de la fonte. L'indice du groupe des produits d'origine végétale a augmenté de 1.0 %, passant de 288.4 à 291.3, à la suite de la progression des prix des aliments pour bétail et volaille, des fruits secs et frais, et des céréales. On a noté une légère augmentation des prix dans le groupe des produits minéraux non métalliques, qui passe de 241.1 à 241.5, et dans le groupe des produits chimiques, qui passe de 250.1 à 250.4.

L'indice général des prix de gros, qui a progressé de 13.6 % depuis février 1972, contient relativement peu d'indices de prix de produits finals pour des marchandises telles que les biens de consommation durables, dont les prix ont peu changé au cours de l'année écoulée. L'indice des prix de vente dans l'industrie, pour les industries manufacturières, qui a augmenté de 7.1 % au cours de la même période, comprend, lui, de tels produits.

Le tableau ci-dessous présente les variations les plus importantes:

#### Security Price Indexes (1961=100)

The Investors index of common stock prices declined 1.2 % in February to 192.2 from 194.5 in January. Each of the three major groups registered a loss with industrials easing 1.1 % to 203.5, utilities declining 0.3 % to 156.5, and finance decreasing 2.7 % to 188.7. Amongst the thirteen industrial sub-groups, losses out numbered gains: the height losses ranged from 0.1 % for non-metallic minerals, to 2.8 % for both petroleum and textiles and clothing; the most important gains were registered in foods and pulp and paper with an increase of 5.2 % to 152.0 and 6.1 % to 125.4 respectively. In utilities all sub-groups but one (transportation, up 4.8 %) declined from 1.2 % to 89.6 for telephone to 3.6 % to 180.1 for pipelines. A decline in the finance index resulted from a loss in both sub-groups: banks declined 2.4 % to 216.7 and investment and loans decreased 3.7 % to 147.2.

In the same period, the index of Mining stock prices moved up 3.8 % to 123.1 with golds and base metals gaining 9.3 % to 135.8 and 0.5 % to 117.2 respectively.

Of the two supplementary indexes, uraniums increased 5.5 % to 194.0 while primary oils and gas went down 4.3 % to 544.4.

The preferred stock index rose 1.0 to 75.4.

#### Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets advanced 4.1 % to 338.7 in February from the revised January index of 325.5. An increase of 5.0 % to 456.6 from 434.9 in the animal products index reflected higher prices for calves, hogs, lambs, steers and raw wool on both Eastern and Western markets, and for poultry in the East. Lower prices were shown for eggs on both markets. The field products index rose 2.1 % to 220.7 from 216.2 on higher prices for potatoes on both Eastern and Western markets, for wheat, oats and corn in the East, and for flax and hay in the West. Lower prices were shown for tobacco in the East and for rye in the West.

#### Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 3.1 % to 347.2 in February from the revised January index of 336.7. Prices were higher for twelve commodities, lower for five and unchanged for thirteen. Principal changes included increases for steel scrap, oats, linseed oil, hogs, raw rubber, tin, domestic lead, domestic copper, raw wool, steers and beef hides while the only decrease of note was for raw sugar.

#### Indices des cours des valeurs mobilières (1961=100)

L'indice des cours des actions ordinaires a baissé de 1.2 %, passant de 194.5 en janvier à 192.2 en février. Les trois principaux groupes ont regressé; ainsi, les industrielles se sont repliées de 1.1 % pour se fixer à 203.5, les services publics, de 0.3 % pour se fixer à 156.5 et les finances, de 2.7 % pour se fixer à 188.7. Parmi les treize sous-groupes industriels, les pertes excédaient les gains; elles étaient comprises entre 0.1 % pour les minéraux non métalliques et 2.8 % pour le pétrole et les textiles et vêtements. Les gains les plus importants ont été observés pour les aliments et les pâtes et papiers, qui ont progressé de 5.2 % et de 6.1 % pour s'inscrire à 152.0 et 125.4 respectivement. Pour ce qui est des services publics, tous les sous-groupes sauf un (celui des transports, qui a progressé de 4.8 %) ont baissé; cette baisse variait entre 1.2 % pour le téléphone (à 89.6) et 3.6 % pour les pipe-lines (à 180.1). La baisse de l'indice des finances est imputable à des diminutions dans les deux sous-groupes: les banques ont baissé de 2.4 % (à 216.7), et les placements et prêts, de 3.7 % (à 147.2).

Au cours de la même période, l'indice des prix des titres miniers a progressé de 3.8 % pour atteindre 123.1. Les aurifères ont gagné 9.3 % à 135.8, et les métaux communs, 0.5 % à 117.2.

Pour ce qui est des deux indices de prix supplémentaires on a noté une hausse de 5.5 % de l'uranium à 194.0, tandis que le pétrole et le gaz primaires se repliaient de 4.3 % à 544.4.

L'indice des actions privilégiées a augmenté de 1.0 à 75.4.

#### Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 4.1 % en février, passant de 325.5 (indice révisé de janvier) à 338.7. Une hausse de 5.0 % de l'indice des produits d'origine animale, qui passe de 434.9 à 456.6, est imputable à l'accroissement du prix des veaux, des porcs, des agneaux, des bouvillons et de la la brute dans l'Est et dans l'Ouest, et du prix de la volaille dans l'Est. Le prix des oeufs a baissé sur les deux marchés. L'indice des prix des produits de grande culture a augmenté de 2.1 %, passant de 216.2 à 220.7, par suite d'une augmentation des prix des pommes de terre dans l'Est et dans l'Ouest, des prix du blé, de l'avoine, et du maïs dans l'Est, et des prix du lin et du foin dans l'Ouest. Les prix du tabac dans l'Est, et du seigle dans l'Ouest, ont baissé.

#### Indice des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a progressé de 3.1 % en février, passant de 336.7 (indice révisé de janvier) à 347.2. Les prix de douze marchandises ont augmenté, ceux de cinq marchandises ont baissé et ils sont restés inchangés dans le cas des treize autres. Les principaux changements comprennent une augmentation des prix des déchets d'acier, de l'avoine, de l'huile de lin, des porcs, du caoutchouc brut, de l'étain, du plomb canadien, du cuivre canadien, de la laine brute, des bouvillons et des peaux de boeuf, tandis que la seule baisse notable a été celle du prix du sucre brut.

The Consumer Price Index for Canada (1961=100) advanced 0.6 % to 145.3 in February from 144.5 in January, thus recording an increase similar to those between January and February in the preceding three years. The latest index reflects prices in effect just prior to the recent Budget Measures. Food prices, which increased 1.1 %, again were the major contributors to the latest month's advance. The level of prices for All-Items other than Food rose 0.4 %, mainly because of a 0.7 % advance in the Housing index. Other components recording increases were Health and Personal Care (0.6 %), Recreation and Reading (0.4 %), Tobacco and Alcohol (0.3 %) and Transportation (0.2 %). The Clothing index declined 0.2 %. Between February 1972 and February 1973, the All-Items Index advanced 5.8 %.

The Food index rose 1.1 % to 151.6 in February from 150.0 in January. This increase compares with an average January to February advance of almost 0.9 % for the preceding three years. In the latest month, restaurant meal prices rose 1.6 %, reflecting increases in many cities across the country. The price level of food consumed at home rose 1.0 % mainly in response to higher prices for beef, pork and poultry which increased 4.5 %, 6.1 % and 3.5 %, respectively. Since February 1972, the meat, fish and poultry index advanced almost 17 % with pork prices increasing, on average, over 26 %. In the latest month, the fruit index, which normally advances at this time of year, rose 0.0 % as higher prices were registered for most fresh, canned and frozen varieties. In contrast, the vegetable index, which also normally rises between January and February, fell 1.7 % in response to lower prices for such fresh items as tomatoes and lettuce. Since February 1972, the fruit and vegetable indexes advanced 10.2 % and 9.3 %, respectively. In the latest month, egg prices edged down by only 0.7 %, a smaller than normal decline for this time of year, leaving the egg index over 40 % above its level of a year previous. Between January and February, the price of fresh milk rose 0.5 % as higher quotations were registered in Vancouver and Victoria as well as in several Ontario cities and in St. John's, Nfld. On the other hand, cheese and ice cream prices edged down, on average, due to specials in some centres, particularly Toronto. The bakery and cereal products index increased 0.4 % as most baked goods, including bread, registered advances. Amongst other foodstuffs, sugar prices remained relatively stable for the fourth consecutive month; soft drinks on the other hand, advanced in price nearly 3 % at the beginning of February to retail more than 6 % higher than three months earlier. Though peanut butter moved up in price 2.5 % in the latest month, it was among the few items which were selling at about the same price as twelve months previous. Another such item was tea bags which moved down nearly 2 % in price between January and February to retail slightly below twelve months earlier. Since February 1972, the Food index advanced 10.2 % with the price of food consumed at home increasing 10.3 % and that for restaurant meals 13.3 %.

The Housing index advanced 0.7 % to 149.0 in February from 148.0 in January as a result of increases of 0.7 % and 0.6 % in the shelter and household operation components, respectively. Within shelter, the homeownership element advanced 1.1 % chiefly because of higher dwelling insurance rates in a number of cities together with an increase in the new houses index; rents moved up 0.2 %. The main factors in the household operation rise were increased fuel oil prices in most cities across the country, and higher household effects insurance rates in a number of centres. Household textiles' prices rose 0.8 % with increased quotations

L'indice des prix à la consommation au Canada (1961=100) a progressé de 0.6 % pour passer de 144.5 en janvier à 145.3 en février, ce qui représente une augmentation analogue à celle enregistrée entre ces deux mois les trois dernières années. Le dernier indice rend compte des prix en vigueur juste avant l'application des récentes mesures budgétaires. Les prix des aliments, qui ont augmenté de 1.1 %, ont encore été la principale cause de la progression du mois dernier. L'indice général de tous les éléments autres que les aliments a progressé de 0.4 %, en raison principalement de l'avance de 0.7 % de l'indice de l'habitation. Les autres éléments qui ont marqué des gains sont des soins personnels et de santé (0.6 %), la lecture et les loisirs (0.4 %), les tabacs et alcools (0.3 %) et les transports (0.2 %). L'indice de l'habillement a régressé de 0.2 %. De février 1972 à février 1973, l'indice a avancé de 5.8 %.

L'indice de l'alimentation a progressé de 1.1 % pour atteindre 151.6 en février, contre 150.0 en janvier. L'augmentation est comparable à la progression moyenne de près de 0.9 % enregistrée de janvier à février au cours des trois années précédentes. Le mois dernier, le prix des repas consommés au restaurant a augmenté de 1.6 %, du fait d'une hausse de prix dans un grand nombre de villes du pays. Les prix des aliments consommés à la maison ont augmenté de 1.0 % en raison surtout de la hausse des prix du bœuf, du porc et de la volaille qui ont augmenté respectivement de 4.5 %, 6.1 % et 3.5 %. Depuis février 1972, l'indice de la viande, du poisson et de la volaille a progressé de près de 17 %, le prix du porc augmentait en moyenne de plus de 26 %. Le mois dernier, l'indice des fruits qui normalement progresse à cette époque de l'année, a augmenté de 3.0 % par suite d'une hausse des prix de la plupart des produits frais, en boîte et congelés. Par contre, l'indice des légumes qui augmente habituellement lui aussi de janvier à février a diminué de 1.7 % à cause d'une baisse du prix de produits frais comme les tomates et la laitue. Par rapport à février 1972, les indices des fruits et des légumes ont progressé respectivement de 10.2 % et de 9.3 %. Le mois dernier, le prix des oeufs n'a diminué que de 0.7 %, ce qui constitue une diminution inférieure à la normale pour cette période-ci de l'année, et laisse l'indice des oeufs à plus de 40 % au-dessus de ce qu'il était un an plus tôt. De janvier à février, le prix du lait frais a augmenté de 0.5 %, par suite de hausses à Vancouver et à Victoria ainsi que dans plusieurs villes de l'Ontario et à Saint-Jean (T.-N.). Par ailleurs, les prix du fromage et de la crème glacée ont en général diminué à cause des soldes dans certaines agglomérations, en particulier à Toronto. L'indice des produits céréaliers et de la boulangerie s'est accru de 0.4 %, le prix de la plupart des pâtisseries ainsi que du pain, ayant progressé. Quant aux autres produits alimentaires, le prix du sucre est demeuré à peu près stationnaire depuis quatre mois; par ailleurs, les boissons gazeuses ont enregistré une hausse de près de 3 % au début de février et se sont détaillées à un prix supérieur de plus de 6 % à celui de trois mois plus tôt. Bien que le prix du beurre d'arachides ait augmenté de 2.5 % le mois dernier, il a quand même été l'un des rares articles à se vendre à peu près le même prix qu'à la période correspondantes de 1972. De même, le prix du thé en sachets a diminué de près de 2 % de janvier à février, pour se vendre au détail à un prix légèrement inférieur à ce qu'il était douze mois auparavant. Depuis février 1972, l'indice de l'alimentation a progressé de 10.2 %, l'augmentation étant de 10.3 % pour les aliments consommés à la maison et de 9.3 % pour les repas pris au restaurant.

L'indice de l'habitation a progressé de 0.7 %; il est passé de 148.0 en janvier à 149.0 en février, suite à des augmentations respectives de 0.7 % et de 0.6 % pour les éléments logement et entretien de l'habitation. Dans le cas du logement, les frais de propriété d'une maison ont augmenté de 1.1 % à cause principalement d'une hausse des taux d'assurance habitation dans certaines villes et d'une augmentation du prix des maisons neuves; les loyers ont augmenté de 0.2 %. Les principaux facteurs de progression de l'élément entretien de l'habitation ont été une hausse du prix du mazout dans la plupart des villes du pays, et une hausse des taux d'assurance des biens ménagers dans certaines agglomérations. Les

for most items surveyed, particularly woollen blankets and curtains. On the other hand, furniture prices dipped 0.2 % chiefly because of scattered sales on bedroom suites and mattresses. Among other household operation items, glassware, dishes, carpets and most cleaning supplies were higher in price, while scouring powder and light bulb quotations were lower. Between February 1972 and February 1973, the Housing index advanced 5.7 %.

The Clothing index decreased 0.2 % to 134.4 in February from 134.7 in January mainly because of a 0.9 % decline in the index for men's wear. Seasonal sale prices on suits, ski parkas, overcoats and business shirts were the major factors in the fall in the men's wear index; higher quotations were registered for slacks, topcoats, undershirts and pyjamas. The children's wear component dipped 0.2 % as sale prices on boys' parkas and shirts, and girls' dresses outweighed some price rises for girls' hosiery and infants' diapers. On the other hand, the women's wear index rose 0.1 % partly as a result of higher prices for girdles and pyjamas. Footwear quotations were unchanged on average. In the twelve months to February 1973, the Clothing index rose 3.5 %.

The Transportation index rose 0.2 % to 133.5 in February from 133.3 in January as increases in the automobile operation and local transportation elements outweighed a seasonal decline in the train fares index. Generally higher gasoline prices together with increased Edmonton automobile insurance rates were chiefly responsible for a 0.2 % rise in the automobile operation component. The local transportation element also rose 0.2 % as a result of an effective increase in Saskatoon local transit fares and increased taxi fares in Moncton, Hamilton, Windsor, Thunder Bay, Saskatoon and Edmonton. In the twelve months to February 1973, the Transportation index rose 0.9 %.

The Health and Personal Care index advanced 0.6 % to 152.8 in February from 151.9 in January as a result of increases of 0.7 % and 0.5 % in the personal care and health care components, respectively. The personal care advance chiefly resulted from a 1.1 % increase in personal care service charges which was due to higher men's haircut and women's hairdressing charges in a number of cities. Personal care supplies' prices rose 0.2 % mainly because of higher quotations for toothbrushes, sanitary napkins, face cream and cleansing tissues. The health care advance reflected 1.2 % higher pharmaceutical prices with increased quotations for most items surveyed. Between February 1972 and February 1973, the Health and Personal Care index rose 3.8 %.

The Recreation and Reading index rose 0.4 % to 142.1 in February from 141.5 in January as higher motion picture admission prices in many cities across the country and increased newspaper subscription rates in Montreal outweighed some lower camera film (including processing) prices. In February 1973, the Recreation and Reading index stood 2.9 % above its level of February 1972.

The Tobacco and Alcohol index rose 0.3 % to 135.7 in February from 135.3 in January. A 0.6 % advance in tobacco product prices reflected higher cigarette quotations in many cities across the country, and some increased liquor prices in Nova Scotia and Manitoba moved the alcoholic beverages element up 0.1 %. Between February 1972 and February 1973, the Tobacco and Alcohol index increased 4.7 %.

prix des textiles ménagers ont augmenté de 0.8 %, la hausse touchant la plupart des articles enquêtés, en particulier les couvertures de laine et les rideaux. D'autre part, les prix des meubles ont diminué de 0.2 % à cause principalement des soldes de mobilier de chambre à coucher et de matelas ici et là. Quant aux autres articles d'entretien de l'habitation, la verrerie, la vaisselle, les tapis et la plupart des fournitures de nettoyage ont subi des hausses de prix, tandis que le prix de la poudre à récurer et des ampoules électriques diminuait. De février 1972 à février 1973, l'indice de l'habitation a marqué une avance de 5.7 %.

L'indice de l'habillement a diminué de 0.2 %, passant de 134.7 en janvier à 134.4 en février, en raison surtout de la baisse de 0.9 % de l'indice des vêtements pour hommes. Les soldes saisonniers de complets, d'anoraks de ski, de pardessus, et de chemises de ville ont été le principal facteur de la baisse de l'indice des vêtements pour hommes: des hausses de prix ont été enregistrées pour les pantalons, les paletots, les maillots de corps et les pyjamas. L'élément des vêtements pour enfants a régressé de 0.2 %; en effet, la diminution du prix des anoraks et des chemises pour garçonnets ainsi que des robes pour fillettes à la suite de soldes a été plus importante que l'augmentation du prix des bas pour fillettes et des couches pour bébés. Par ailleurs, l'indice des vêtements pour femmes a augmenté de 0.1 %; cette hausse est en partie attribuable à la majoration du prix des gaines et des pyjamas. Les prix des chaussures sont, en moyenne, demeurés stationnaires. De février 1972 à février 1973, l'indice de l'habillement a progressé de 3.5 %.

L'indice des transports a augmenté de 0.2 %, passant de 133.3 en janvier à 133.5 en février, l'augmentation des frais d'automobile et du prix des billets de transport urbain l'ayant emporté sur la diminution saisonnière de l'indice des billets de train. L'augmentation générale du prix de l'essence de même que la hausse des primes d'assurance-automobile à Edmonton ont été la principale cause de la hausse de 0.2 % des frais d'automobile. L'élément des transports urbains a également progressé de 0.2 % par suite de ce qui constitue en réalité une augmentation du prix des billets de transport urbain à Saskatoon, et de la hausse du prix des courses en taxis à Moncton, Hamilton, Windsor, Thunder Bay, Saskatoon et Edmonton. Au cours des douze derniers mois, l'indice des transports s'est accru de 0.9 %.

L'indice des soins personnels et de santé a avancé de 0.6 %, passant de 151.9 en janvier à 152.8 en février, en raison de l'accroissement respectif de 0.7 % et de 0.5 % des éléments soins personnels et santé. La hausse du prix des soins personnels est surtout attribuable à une majoration de 1.1 % du coût des services des soins personnels résultant de la hausse du prix de la coupe de cheveux pour hommes et des frais de coiffure pour dames dans un certain nombre de villes. Le prix des produits de soins personnels s'est accru de 0.2 % à cause surtout de l'augmentation du prix des brosses à dents, des serviettes hygiéniques, de la crème de beauté et du papier de démaquillage. La progression de l'élément santé résulte de la hausse de 1.2 % du prix de la plupart des produits pharmaceutiques observés. De février 1972 à février 1973, l'indice des soins personnels et de santé a progressé de 3.8 %.

L'indice des loisirs et de la lecture a progressé de 0.4 %, passant de 141.5 en janvier à 142.1 en février, en raison de l'augmentation du prix du billet d'entrée au cinéma dans bon nombre de villes au Canada et de la hausse des frais d'abonnement aux journaux à Montréal qui l'ont emporté sur des diminutions du prix des pellicules photographiques (y compris le développement). En février 1973, l'indice des loisirs et de la lecture a été supérieur de 2.9 % à celui de février 1972.

L'indice des tabacs et alcools a progressé de 0.3 %, passant de 135.3 en janvier à 135.7 en février. L'augmentation de 0.6 % du prix des produits du tabac est attribuable à la hausse du prix des cigarettes dans de nombreuses villes du Canada; l'augmentation du prix des spiritueux en Nouvelle-Ecosse et au Manitoba a été la cause de l'avance de 0.1 % du l'élément boissons alcooliques. De février 1972 à février 1973, l'indice des tabacs et alcools a progressé de 4.7 %.

Consumer price movements, when classified by commodities and services, offer another view of the incidence of price change. Between January and February, the services index advanced 0.5 % because of higher household and automobile insurance rates, increased prices for theatre admission, men's haircuts and women's hairdressing and higher taxi and local transit fares. The total commodities index advanced 0.6 % mainly as a result of the 1.1 % rise in food prices. Prices for non-durable commodities other than food moved up 0.4 % as increased quotations for fuel oil, gasoline, tobacco products, pharmaceuticals, toiletries, cleaning supplies and alcoholic beverages outweighed reduced clothing prices. No change was recorded in the durables index. In the twelve months to February 1973, commodities prices advanced 5.9 % while the services index increased 5.7 %

Si l'on classe les articles qui entrent dans l'indice des prix à la consommation par biens et services, on obtient une image différente du mouvement des prix. Ainsi, l'indice des services a avancé de 0.5 % de janvier à février; cette hausse est attribuable à l'augmentation des primes d'assurance sur les meubles et les automobiles, à l'accroissement du prix du billet d'entrée au cinéma, du prix des coupes de cheveux pour hommes, des frais de coiffure pour dames, du prix des courses en taxis et du prix du billet de transport urbain. L'indice des biens a progressé de 0.6 % par suite surtout de la hausse de 1.1 % du prix des aliments. Le prix des biens non durables autres que les aliments, a progressé de 0.4 %, l'augmentation du prix du mazout, de l'essence, des produits du tabac, des produits pharmaceutiques, des articles de toilette, des nettoyeurs et des boissons alcooliques l'ayant emporté sur la diminution du prix des vêtements. Aucun changement n'a été enregistré dans l'indice des biens durables. Au cours des douze derniers mois, l'indice des biens a progressé de 5.9 %; l'indice des services a augmenté de 5.7 %.

TABLE 1. Summary of Current Price Indexes

TABLEAU 1. Récapitulation des indices des prix courants

	Indexes				Percentage changes		
	Indices				Variation proportionnelle		
	Feb. 1973	Jan. 1973	Feb. 1972	Jan. 1972	Feb. 1973	Feb. 1972	Feb. 1973

	1973	132.8	134.2											

(1) Indexes for 1972 and 1973 are subject to revision. - Les indices pour 1972 et 1973 sont sujets à révision.

(2) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series	New series
	Ancienne série	Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

(3) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.

(4) Gross weighted, including inter-industry shipments. For explanation see page 85. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 85.

(1) Includes gold - Y compris l'or

(2) Consists of iron products and non-ferrous metals groups above but excluding gold - Se compose des groupes élémentaires des produits du fer et des produits des métaux non ferreux moins l'or

(3) These two series comprise the General Wholesale Index - Ces deux séries comprennent l'indice général de gros

(4) Excludes gold - Sauf l'or

(5) All indexes for current year are subject to revision - Les données de l'année courante sont sujettes à révision

TABLEAU 6. Indices des prix de gros de certains produits bruts(1)

(1935-39=100)

Primary commodities - Produits bruts	Months - Mois				Annual averages - Moyenne annuelle		
	Feb. 1973	Jan. 1973	Feb. 1972	Jan. 1972	1972	1971	1970
	Fév.	Janv.	Fév.	Janv.			
Beans, coffee - Grains de café .....	435.5	416.3	313.3	318.5	358.1	317.4	391.7
Copper, electrolytic - Cuivre électrolytique ...	522.1	494.1	469.7	469.7	474.3	492.5	541.6
Cotton, raw - Coton brut .....	320.7	318.0	322.0	318.8	330.0	292.1	282.0
Eggs - Oeufs .....	158.0	171.8	112.6	129.7	136.2	122.1	139.6
Fruits, fresh - Fruits frais .....	286.9	276.0	208.7	194.5	223.5	230.0	229.6
Grains - Céréales .....	283.4	279.7	182.5	183.1	205.7	192.3	193.7
Hides and skins - Cuirs et peaux vertes .....	371.8	364.8	198.1	185.3	295.1	157.6	171.4
Lead, electrolytic - Plomb électrolytique .....	335.4	314.5	304.0	283.0	323.2	283.0	331.0
Livestock - Bétail .....	564.3	518.6	440.5	419.3	458.7	386.0	396.2
Onions - Oignons .....	440.5	367.0	156.5	159.9	259.8	180.8	261.6
Potatoes - Pommes de terre .....	406.1	349.1	167.5	164.8	219.1	194.2	247.2
Rubber, raw - Caoutchouc brut .....	160.6	148.1	113.0	114.8	114.0	117.4	140.8
Scrap iron and steel - Déchets de fer et d'acier	364.1	309.6	261.3	261.8	268.1	284.2	328.9
Silver - Argent .....	579.8	529.2	387.9	383.5	430.6	405.6	478.1
Steers - Bouvillons .....	690.4	662.2	596.4	588.1	597.6	548.8	510.8
Sugar, raw - Sucre brut .....	287.0	299.9	271.7	282.8	253.9	178.7	160.9
Tin - Etain .....	367.8	340.6	328.4	328.4	338.8	324.2	349.6
Wool, raw domestic - Laine brute indigène .....	363.3	343.7	151.9	146.2	201.7	141.1	152.4
Wool, raw, imported - Laine brute importée .....	358.4	308.4	164.4	150.2	196.8	135.0	149.3
Zinc, prime, western - Zinc de première qualité, de l'Ouest .....	433.6	433.6	378.0	378.0	411.4	357.6	341.0

- (1) Includes cuts with bone-in and boned and rolled. - Y compris les morceaux avec os, sans os et roulés.  
(2) Includes cuts with blade-in and blade removed. - Y compris les morceaux avec ou sans palette.  
(3) 1965=100. - 100 en 1965.  
(4) Indexes based on chain store prices in 7 cities. - Les indices sont fondés sur les prix dans les magasins à succursales multiples de 7 villes.  
(5) Indexes based on prices in 16 cities. - Les indices sont fondés sur les prix dans 16 villes.  
(6) 1963=100. - 100 en 1963.  
(7) Indexes based on prices for pectin and pure jam combined. - Les indices sont basés sur les prix de la confiture avec pectine et de la confiture pure.  
(8) June 1968=100. - 100 en juin 1968.

TABLE 11. Consumer Price Indexes, Regional Cities, 1962-73(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines, 1962-73(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

Average - Moyenne							

2 & 3) From Tables 18 and 19. - Provenant des Tableaux 18 et 19.

4) Weights used to combine wage rate series. - Coefficients de pondération utilisés pour réunir les séries sur les taux de rémunération:

(Source: Dept. of Labour

(Source: Ministère  
du Travail)

Labourer - Ouvrier .....	46
Carpenter - Menuisier-charpentier .....	30
Painter - Peintre .....	7
Electrician - Electricien .....	5
Plumber - Plombier .....	5
Bricklayer and Mason - Briqueteur et maçon .....	3
Sheet Metal Worker - Ferblantier .....	2
Truck Driver - Conducteur de camion .....	2
Total .....	100

5) Implicit weights of the 1961=100 arithmetically converted indexes, materials 51.9, wages 48.1. - Coefficients implicites de Pondération obtenus par conversion arithmétique à 1961=100, matériaux 51.9, main-d'oeuvre 48.1.

6) Implicit weights materials 55.1, wages 44.9. - Coefficients implicites de Pondération, matériaux 55.1, main-d'oeuvre 44.9.

7 & 8) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No 13-001 au catalogue, trimestriel).

8) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractors profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.

For further detailed explanation see Prices and Price Indexes - May 1970. - Pour des explications détaillées voir Prix et indices des prix - Mai 1970.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1<sup>er</sup> avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

TABLEAU 26. Indice des prix de la construction dans les services d'électricité, Canada, par année depuis 1958

1961=100

	Year - Année							
	1958	1959	1960	1961	1962	1963	1964	1965
Distribution systems - Total(3) -								
Réseaux de distribution .....	93.2	96.8	100.3	100.0	101.8	102.5	104.6	107.1
Construction - Construction .....	93.5	96.3	98.5	100.0	102.5	105.2	107.7	112.3
Equipment - Matériel .....	92.5	97.9	104.3	100.0	100.4	96.4	97.6	95.4
Transmission lines - Total(3) - Lignes de transmission .....	95.7	97.0	98.9	100.0	100.9	102.3	102.7	108.5
Transformer stations - Total(3) - Postes de transformation .....	109.0	113.5	109.8	100.0	105.1	107.6	112.0	118.0
Structures and improvements - Installations et améliorations .....	101.3	102.6	103.3	100.0	102.6	108.9	112.9	122.0r
Equipment - Matériel .....	118.4	123.2	115.7	100.0	105.9	107.3	111.9	117.4
Hydro-electric generating stations(4) - Centrales d'énergie hydro-électrique(4) .....				100.0	102.7	106.1r	109.6r	115.0r
	1966	1967	1968	1969	1970	1971	1972p	
Distribution systems - Total(3) -								
Réseaux de distribution .....	112.4	116.1	115.6	120.3	129.3	133.8	139.9	
Construction - Construction .....	118.4	125.3	126.3	133.0	144.5	149.6	158.2	
Equipment - Matériel .....	99.0	95.7	91.8	91.8	95.4	98.6	99.1	
Transmission lines - Total(3) - Lignes de transmission .....	113.0	118.7	121.9	127.5	136.5	141.4	147.2	
Transformer stations - Total(3) - Postes de transformation .....	122.4	121.2	117.2	120.4	132.5r	139.2	142.8	
Structures and improvements - Installations et améliorations .....	130.2r	126.9r	124.2r	131.6r	139.2r	143.7	149.4	
Equipment - Matériel .....	120.4	115.1	106.7	106.1	119.4	124.8	125.4	
Hydro-electric generating stations(4) - Centrales d'énergie hydro-électrique(4) .....	122.1r	126.5r	131.6r	139.5r	148.3r	155.2	164.5	

(1) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service bulletin, 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des prix dans la construction, no 62-006 au catalogue.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières, par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) For further detailed explanation see occasional paper 62-526. - Pour plus de renseignements, voir le bulletin hors série No 62-526 au catalogue.

(4) For further detailed explanation see occasional paper 62-533. - Pour plus de renseignements, voir le bulletin hors série No 62-533 au catalogue.

supplémentaires des séries de prix

Industrial Price Indexes

Indices des prix industriels

Industry Selling Price Indexes (1961=100)

Indices des prix de vente dans l'industrie (1961=100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15<sup>th</sup> of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of extracting escalations.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Industry Selling Price Index: Manufacturing

Indices des prix de vente dans l'industrie: Industries manufacturières

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix des livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

Purchase Price Indexes of Secondary Metals  
(1969=100)

Indices du prix d'achat des métaux de deuxième fusion  
(1969=100)

Ferrous and non-ferrous indexes are compiled from series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Canadian Farm Products Price Index (1935-39=100)

Indice des prix des produits agricoles canadiens (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1, 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14 % at Thunder Bay. Prices for Western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised as further payments are announced.

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. À compter du 1<sup>er</sup> août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14 %) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Final payments for the crop year August 1971 - July 1972 were announced on February 13, 1973 for wheat and oats. No final payment was granted for barley.

Les prix définitifs pour la campagne allant d'août 1971 à juillet 1972 ont été annoncés le 13 février 1973, en ce qui concerne le blé et l'avoine. Il n'y a pas eu de dernier paiement pour l'orge.

 (3) Used in indexes Aug. 1972 to July 1973. — Utilisé dans les indices d'août 1972 jusqu'en juillet 1973.

#### General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things

#### Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte des transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En

implicit in commodity prices. As a conventional base figure, its use has tended towards a reference point against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main contribution now lies in its long historical continuity.

For further details about the General Wholesale Price Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials,  
1935-39 = 100

The price index of thirty industrial materials is calculated as an unweighted geometric average prices of the selected commodities. The formula is as follows:

$$\frac{\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}{P_{t \ 35-39}^1 \times P_{t \ 35-39}^2 \times P_{t \ 35-39}^3 \times \dots \times P_{t \ 35-39}^{30}}$$

The selection of materials for pricing related to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We intend to construct an index of industrial prices that will be more traditional Laspeyres type in its construction. The present published index contains prices for some materials that no longer constitute important industrial inputs.

tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter Wholesale Price Indexes 1913-50 (Reference Paper No. 24) et Prices and Price Indexes 1949-52 (Vol. 23) (n° 62-501 au catalogue).

Indice des prix de trente matières industrielles  
(1939-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\frac{\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}{\sqrt[30]{P_{t \ 35-39}^1 \times P_{t \ 35-39}^2 \times P_{t \ 35-39}^3 \times \dots \times P_{t \ 35-39}^{30}}}$$

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

## Retail Price Indexes

### Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services of items for which there is a continually measurable market price over time, corresponding to a specific quantity of the item.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index is unlikely to represent closely the experience of any one family within the group nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families - (a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In 1952, the time base was updated to 1949=100 from 1935-39=100 and, at the same time, weights were revised to reflect family expenditure patterns in 1947-48. A subsequent revision of weights based on 1957 expenditures was introduced at the beginning of 1961 and the time base was revised from 1949=100 to 1961=100 at the beginning of 1969.

Full details on the latest weighting patterns and time base revisions are available in the occasional paper "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures", Statistics Canada Catalogue No. 62-518 and in the January 1969 issue of the monthly bulletin, Prices and Price Indexes, Catalogue No. 62-002.

### Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). The regional indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada except for their individual weighting systems.

Also, city indexes are not as comprehensive in price content as the Canada consumer price index and may underestimate slightly the degree of price movements occurring. In this connection, the shelter component of the city indexes moves on the basis of changes in rents only, whereas changes in both rents and homeownership costs are included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and all-items indexes for cities have tended to underestimate somewhat the rates of price increase, particularly over longer periods. Studies are under way to incorporate homeownership prices in city indexes.

Each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

## Indices des prix de détail

### Indice des prix à la consommation au Canada (1961=100)

L'indice des prix à la consommation sert à mesurer le taux de variation du prix qu'il en coûte pour acheter un "panier" de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" demeure le même; il équivaut tout au moins à une quantité égale de biens et services de qualité égale; de plus, il est constitué de produits pour lesquels on peut toujours trouver sur le marché un prix mesurable et correspondant à une quantité déterminée de ce produit.

L'indice porte sur un groupe étendu mais bien déterminé de familles urbaines et rend compte des variations des prix auxquelles l'échantillon en question a dû faire face. Il est fort peu probable que l'indice représente fidèlement l'expérience d'une famille en particulier; de même, il ne faut pas s'attendre à ce qu'il rende compte des variations des prix auxquelles ont fait face des groupes sensiblement différents par le revenu, la taille de la famille et le lieu de résidence. L'échantillon sur lequel porte l'indice est composé de familles - a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille oscille entre deux adultes et deux adultes avec quatre enfants et c) dont le revenu annuel en 1957 oscillait entre \$2,500 et \$7,000. Pour évaluer l'influence des variations de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation porte sur les variations d'environ 300 articles.

L'indice des prix à la consommation au Canada remonte au début du siècle; depuis lors, on a révisé périodiquement la période de référence et les schémas de pondération. Ainsi, en 1952, la période de référence est passée de 1935-1939=100 à 1949=100; à la même occasion, les poids ont été revus de façon à présenter un reflet de la structure des dépenses des familles en 1947-48. La révision suivante des facteurs de pondération était fondée sur les dépenses des consommateurs en 1957 et fut introduite au début de 1961. Enfin, c'est au début de 1969 qu'on porta la période de 1949=100 à 1961=100.

Le lecteur trouvera de plus amples renseignements sur les dernières révisions du schéma de pondération et de la période de référence dans la publication occasionnelle "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures" (n° 62-518) et dans la livraison de janvier 1969 du bulletin mensuel "Prices and Price Indexes" (n° 62-002).

### Indices des prix à la consommation dans certaines agglomérations urbaines (1961=100)

Ces indices sont publiés mensuellement dans le présent bulletin (voir Tableau 11). Par leur conception et par les éléments qui les composent, ces indices sont en général similaires à l'indice des prix à la consommation au Canada, seuls leurs coefficients de pondération diffèrent.

Aussi, les indices de prix dans les villes ne représentent pas les prix de façon aussi complète que l'indice des prix à la consommation au Canada et ils peuvent sous-estimer légèrement l'importance des mouvements de prix. C'est ainsi que l'élément "logement" des indices des villes varie en fonction des changements dans les loyers uniquement, alors que l'indice pour l'ensemble du Canada comprend les loyers et les coûts de propriété. À la suite d'une augmentation des coûts de propriété plus rapide que celle des loyers, les indices de l'habitation et de tous les éléments pour les villes ont tendu à sous-estimer quelque peu les taux de croissance des prix, surtout sur de plus longues périodes de temps. On étudie actuellement l'incorporation des prix de propriété dans les indices des villes.

Chaque indice est conçu de façon à mesurer les conséquences des variations des prix de détail survenues dans les agglomérations en question sur le prix d'un panier constant de biens et de services représentant la consommation d'un groupe représentatif de familles appartenant à ces secteurs.

In using the city indexes, it should be remembered they are not indicators of comparative levels of prices as between the cities. That is, they do not show in any way indicate whether prices are higher or lower in one city than in another.

For comparisons of retail price differentials between cities see Table 14 of this publication and the accompanying explanatory note.

Historical Consumer Price Indexes (1969=100) for "Thunder Bay" and "Quebec City" are available, with explanatory notes on request from Retail Prices Section, Statistics Canada.

#### Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by regressing actual earnings averages by the percentage amounts by which consumer price levels rise, or increasing them by the percentage amounts by which consumer price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings. Consumer price levels and consumption patterns have remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10 % rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25 % rise from \$80.00 to \$100.00 overstates the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100 by the amount of the consumer price increase. The adjusted average is \$90.91 ( $100.0/110.0 \times \$100.$ ), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be used to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as 100.0, the week B index becomes 113.6 ( $90.91/80.00 \times 100.0$ ). Such an index may be called an index of real wages. It indicates that average wages for week B will buy 13.6 % more goods and services than were received in week A, in spite of a 10 % rise in consumer prices. This 13.6 % increase in real wages corresponds with the rise of 25 % in money wages ( $100.00/80.00 \times 100.0$ ).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or the wage-earner. Moreover, individual spending patterns differ widely, but the consumer price index which is used to adjust the earnings data refers only to the general consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings adjusted by the consumer price index (which has a fixed consumption pattern), will gradually be rendered

Le lecteur devra toujours garder en mémoire que ces indices ne sont pas des indicateurs qui permettent de comparer le niveau des prix d'une ville à l'autre et qu'ils n'indiquent en aucune façon si les prix sont plus ou moins élevés dans une ville que dans une autre.

Pour étudier les différences de prix au détail entre les villes, il faut consulter le Tableau 14 de ce bulletin et les notes explicatives qui l'accompagnent.

Les indices chronologiques des prix à la consommation (1969=100) pour Québec et Thunder Bay et les notes explicatives qui les accompagnent peuvent être obtenus de la Section des prix de détail de la Division des prix de Statistique Canada.

#### Calcul du pouvoir d'achat

Toute variation des prix à la consommation influe directement sur la quantité de biens et de services qu'on peut acheter avec un dollar et par conséquent sur le revenu moyen. Pour mesurer le revenu en tenant compte de la variation des prix à la consommation, on peut déduire du revenu moyen réel le montant proportionnel qui correspond à l'augmentation des prix à la consommation ou ajouter au revenu réel le montant qui équivaut à la diminution des prix à la consommation. Ces moyennes corrigées peuvent ensuite servir à déterminer la quantité de biens et de services qu'on aurait pu acheter grâce à un revenu moyen, les prix à la consommation et les habitudes de consommation n'ayant pas changé. On trouvera ci-dessous des exemples de cette méthode.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B et que dans la même période de temps l'indice des prix à la consommation progresse de 100.0 à 110.0. En raison de l'augmentation de 10 % des prix à la consommation, on n'obtiendra plus autant avec \$1 au cours de la semaine B que pendant la semaine A. De même il serait exagéré de dire que, pour une augmentation de la rémunération de \$80 à \$100 le pouvoir d'achat du salaire hebdomadaire moyen s'est élevé de 25 %. On peut ramener cette augmentation à des proportions plus justes en déduisant du nouveau salaire hebdomadaire moyen l'augmentation des prix à la consommation. La rémunération moyenne corrigée s'établira donc à \$90.91 ( $100.0/110.0 \times \$100.$ ), dont on peut dire qu'elle exprime la rémunération hebdomadaire moyenne de la semaine B en dollars de la semaine A, ou encore qu'elle rend compte du niveau effectif de la rémunération hebdomadaire de la semaine B par rapport à la semaine A.

On peut pousser plus loin les calculs et exprimer à l'aide d'un indice la relation entre le salaire moyen de la semaine A (\$80) et celui de la semaine B (\$90.91). Ainsi, si l'on considère que la rémunération moyenne de \$80 de la semaine A était égale à 100.0, l'indice de la semaine B deviendra 113.6 ( $90.91/80.00 \times 100.0$ ). On pourrait appeler cet indice l'indice de la rémunération hebdomadaire effective; il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6 % de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10 % des prix à la consommation. L'augmentation de 25 % des salaires se ramène donc à une augmentation effective de 13.6 % ( $100.0/80.00 \times 100.0$ ).

Il convient de souligner que, même si les estimations de la rémunération moyenne effective résument assez bien la situation d'un large éventail de travailleurs, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur le revenu porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur le revenu ajustées par l'indice des prix à la consommation (les habitudes de consommation étant "fixes") perdront graduellement de leur

less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.

#### Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned.) While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were

valeur. Enfin, il ne faut pas oublier qu'une partie du revenu peut être consacrée à l'épargne et qu'il serait faux de réduire cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations du revenu effectif calculées à partir de moyennes du revenu brut peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers, des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés et de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente la rémunération tant réelle qu'effective prend pour base l'année 1961. Toutefois, les ajustements illustrés dans les exemples ci-dessus peuvent s'appliquer à tout niveau de référence; la variation proportionnelle entre deux périodes sera en effet identique quelle que soit la période de référence choisie.

#### Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix aux quels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau est la question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prices and Price Indexes* (no 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves, pour lesquelles les diffé-

ved directly from new comparisons based on May 1971 e data, the updating of these measurements of in-city retail price differentials was accomplished application of the relative movement of prices, at item level in each city, over the intervening pe- as derived from the relevant city consumer price kes. These price relationships at the item level aggregated on the basis of the Canada urban con- spending pattern, rather than the patterns appli- to individual cities. While differences in spen- patterns exist among cities, the magnitude of e differences in the cities covered is not such as effect most of the spatial comparisons significantly. use of the previously mentioned absence of shelter e relationships, which may be of considerable si- ficance in any overall comparison of inter-urban il price differentials, aggregative indexes beyond r budget groupings are not shown.

It should be noted that the retail prices used his comparisons, being those faced by consumers, ude sales and excise taxes as applicable. Varia- ts between provinces in the scale of sales taxes sed on a wide range of non-food commodities can e significance in explaining inter-city price diffe- als for these items.

While these indexes have been expressed in terms inipeg = 100, the selection of Winnipeg as the city has no special significance, and the indexes e expressed on the base of any of the individual es included.

#### Input Price Indexes (1961=100)

Farm Input Price Indexes measure, through time, ges in prices of commodities and services used in dian farming operations. The item content and ts are based on data from the 1958 Farm Income and nditure Survey, the most recent source of suffi- tly detailed data. These data have been modified efect 1961 prices and conditions. Farm Input e Indexes are calculated quarterly for Eastern, ern and all Canada on a 1961=100 time base.

Farm Input Price Indexes replace one of the two r component indexes of the previously published es, Price Index Numbers of Commodities and Services y Farmers, 1935-39=100. The latter index was osed of a Farm Family Living Index and a Composite x Exclusive of Living Component. The Farm Input e Indexes replaces the Composite Index Exclusive iving'Component from 1961 forward.

A detailed description of concepts, methods and sources is contained in the occasional paper, Input Price Indexes, 1961=100, Catalogue No. 62-534, is reproduced in the September 1971 issue of Prices and Price Indexes, Catalogue No. 62-002. The foregoing ications also contain total and component price in- s for Eastern, Western, and all Canada, from 1961 nd including the third quarter 1971.

Current price indexes will be published on a lar basis in the quarterly publication, Farm Input e Indexes, 1961=100, Catalogue No. 62-004, and in monthly publication Prices and Price Indexes, logue No. 62-002.

The Farm Family Living component of the 1935-39 es has not been replaced by an updated counterpart, publication has been suspended.

férences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

#### Indices de prix des entrées dans l'agriculture (1961=100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961=100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39=100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série Farm Input Price Indexes, 1961=100 (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans Prices and Price Indexes de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel Farm Input Price Indexes, 1961=100 (n° 62-004) et dans le bulletin annuel Prices and Price Indexes (n° 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de le publier.

## Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the Globe and Mail and the Montreal Gazette. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of prices in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Investors Index and Preferred Index, see list below.

### Investors Index (114) Indices des placements (114)

## Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placeur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotés à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont basés sur la fermeture de la Bourse du jeudi indiqués dans le Globe and Mail et dans la Montreal Gazette. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base de 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons textiles et habillement, pâtes et papiers, et huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipe-lines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie de traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent d'être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve ci-dessous.

Residential and Non-Residential Building  
Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of Prices and Price Indexes, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators(1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

Indices des prix de la construction résidentielle  
et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans Prices and Price Indexes de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à ce fin. Si l'on compare ces séries avec les facteurs de dégonflement(1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

(1) Division du revenu national et de la défense nationale, Statistique Canada.

(2) Indices des prix de vente dans l'industrie, 1956-1968, n° 62-528 au catalogue.

The Construction wage rate series is based on rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961=100 and therefore combining the components with the weights as shown not provide the composite index provided. Users are to provide their own weights for the components and recombine the components to suit their particular needs.

#### Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared for each as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full details, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived from the Construction Collective Agreement Survey provided by the Canadian Construction Association.

These rates are supplemented as necessary by rates of some union locals. While indexes containing elementary benefits will be available soon, presently published indexes relate to basic union wage rates. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates are converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Canada data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the construction trades employed in a given city. These union workers in cities tend to be engaged in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample, these indexes best approximate wage rate change for non-residential construction.

#### Highway Construction Price Indexes (1961=100)(3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments for contracts awarded for highway construction each year as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as related to the previously published indexes to a 1961 time base. Users are warned that an

the years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961=100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

#### Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication Prix et indices des prix (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service Statistique des prix dans la construction (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication Construction Collective Agreement Survey Service de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

#### Indices des prix de la construction routière (1961=100)(3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961=100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956=100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices

(3) Il s'agit d'exercices financiers. 1968 représente donc la période du 1<sup>er</sup> avril 1968 au 31 mars 1969.

aggregation of the converted major group indexes with the published weights will not yield the published 1961=100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to his own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of Prices and Price Indexes, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

#### Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

convertis des grands groupes et des pondérations publiées dans l'indice général publié (1961=100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de Prices and Price Indexes (n° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé Price Indexes of Highway Construction in Canada (n° 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière et à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement de travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectuées comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix de travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix des matériaux fournis sont les prix payés par les ministères aux fournisseurs.

#### Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'œuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling for such unique transactions as, for example, sale of a transmission line, it was not possible to use an index of the prices of completed structures. Deflated structure indexes would be appropriate for estimating either to estimate reproduction costs or replacement capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such uses provided the users understand the deficiencies. The reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526, "Indexes of Electrical Utility Construction - The Utility for Compromise and Section XI, (of the same title) "Uses and Limitations". In addition, because electrical construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials and equipment derived from a variety of projects in a specific base period. Thus, if the composite price indexes and their weights included in the composite index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published in this report. These indexes could then be combined into an aggregate index by utilizing weights derived from the costs or assets to be costed or deflated.

Prices used in the indexes are for the most part the prices reported monthly by manufacturers for materials or equipment. The price reported is for units in terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities represent a small share of the total sales of the manufacturer the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utilities. In such cases, prices charged other than manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial changes. Until December 1964 wage rate data were used by the Federal Department of Labour and reported minimum hourly rates paid to construction workers in major cities employed on federal government projects. In 1965 union basic wage rates reported by electric utilities and some contractors were incorporated in the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relative to rural non-union work for transmission lines.

Construction has been defined as new construction or reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. Components of cost relating to distribution and transmission facilities encompass such items as poles, wires, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g., - lined groundmen. Costs relating to construction equipment such as trucks, and components of equipment including costs such as tires, gasoline and repairs are also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformation and switching equipment. Expenditures for land and rights-of-way have been excluded.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication Price Indexes of Electrical Utility Construction (Statistique Canada, 62-526); "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité des fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation de réseaux de distribution, de lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses en main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

#### Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation, permanent houses, etc.

#### Price Indexes of Machinery & Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'autoconsommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

#### Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice des centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériel et de location de matériel pour la production de béton des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fournitures et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

#### Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente des fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés à mesure qu'ils seront disponibles. En

liminary indexes for a number of other industries available on request. Certain commodity indexes exclude adjustments for exchange, duty and retail sales tax can also be provided on request.

attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix des marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

# NOTES ON PRICES AND PRICE INDEX NUMBERS

## Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) moved 1.3 % higher in March to 136.1 from the February index of 134.3. It was 8.1 % higher than the March 1972 index of 125.9. Of the 101 industry indexes included in the Total, 64 were higher, 8 declined and 29 were unchanged. The month to month increase in the index continued to reflect a significantly higher rate of advance in 1973 than that experienced in most of 1972.

The commodities whose price change contributed most to the changes in the index at the total level continued to be commodities such as foods and food related goods (notably meat, poultry and feeds), wool and wool products, lumber, and many metals.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were continuing advances registered for the foods and beverage group, particularly in the slaughtering and meat packing and poultry processing industries. The primary metals group moved higher reflecting price increases in the smelting and refining, and in the copper and alloy, rolling, casting and extruding industries. Continuing advances occurred in the wood products group on higher prices recorded in the sawmills and planing mills, sash door and other millwork plants, and veneer and plywood mills industries. Declines during the month were relatively insignificant.

## February to March Changes in Industry Indexes

# NOTES SUR LES PRIX ET LES INDICES DE PRIX

## Indice des prix de ventes dans l'industrie: industries manufacturières (1961=100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières (1961=100) a augmenté de 1.3 % en mars, passant de 134.3 en février à 136.1. Il était de 8.1 % supérieur à l'indice de mars 1972 (125.9). Sur les 101 industries comprises dans ce total, les indices ont augmenté dans 64 industries, ils ont baissé dans 8 et sont restés inchangés dans 29. Le taux d'accroissement enregistré entre deux mois en 1973 est demeuré sensiblement plus élevé qu'au cours de 1972.

Les variations les plus importantes ont encore une fois été les augmentations du groupe des aliments et boissons (et en particulier des éléments abattage et conditionnement de la viande, et conditionnement de la volaille). Le groupe de la première transformation des métaux a progressé en raison d'une hausse des prix pratiqués par l'industrie de la fonte et de l'affinage et par l'industrie du laminage, du moulage et de l'extrusion du cuivre et de ses alliages.

Le groupe des produits du bois a poursuivi son avance en raison d'une augmentation des prix dans les scieries, dans l'industrie des portes et châssis, dans les ateliers de rabotage et dans des fabriques de placages et de contre-plaqués. Les diminutions enregistrées au cours du mois ont été relativement peu importantes.

# General Wholesale Index (1935-39=100)

The general wholesale price index rose 2.0 % in March to 350.0 from the revised February index of 343.2. It was 15.1 % higher than the March 1972 index of 304.0. All eight major group indexes were higher.

The textile products group index rose 4.4 % in March to 309.5 from 296.4 on higher prices for miscellaneous fibre products, worsted and wool cloth and imported and domestic raw wool. An advance of 4.3 % to 301.4 from 289.0 in the non-ferrous metals products group index reflected price increases for copper and its products and domestic zinc. Higher prices for livestock, and fresh and cured meats were chiefly responsible for a rise of 2.2 % to 427.7 from 418.3 in the animal products group index. An advance of 2.1 % to 500.0 from 489.7 in the wood products group index reflected price increases for fir, pine, hemlock, cedar and spruce. The vegetable products group index moved 1.1 % higher to 294.6 from 291.3 on higher prices for potatoes, milled cereal foods and tea, coffee and cocoa. An increase of 1.1 % to 252.6 from 249.8 occurred in the chemical products group index on price increases for soaps and detergents, fertilizer materials, and paint and paint materials. Fractionally higher price movements were recorded in the iron products group index to 344.0 from 342.5 and in the non-metallic minerals group index to 242.8 from 241.9.

The General Wholesale Index, which advanced 15.1 % from March 1972, contains relatively few final product price indexes for commodities such as consumer durable goods, whose prices have changed little during the past year. The Industry Selling Price Index for manufacturing, which advanced 8.1 % during the same period, does include such products.

The following table lists the Total Index and component groupings for specified dates:

# Indice général des prix de gros

L'indice général des prix de gros (1935-39=100) a progressé de 2.0 % en mars, passant de 343.2 en février (indice rectifié) à 350.0 en mars; ceci représente une hausse de 15.1 % par rapport à 1972 (304.0). Les indices des huit principaux groupes ont tous augmenté.

L'indice du groupe des matières textiles a augmenté de 4.4 % en mars, passant de 296.4 en février à 309.5, à la suite d'une hausse du prix de divers produits en fibres, du worsted et des tissus en laine et de la laine brute canadienne et importée. L'indice des métaux non-ferreux est passé de 289.0 à 301.4 (+ 4.3 %) en raison d'une augmentation du prix du cuivre et de ses produits et du zinc produit au pays. L'indice des produits d'origine animale est passé de 418.3 à 427.7 (+ 2.2 %) en raison principalement d'une hausse du prix du bétail, de la viande fraîche et de la viande salée et fumée. L'avance de 2.1 % de l'indice des produits du bois (de 489.7 à 500.0) est attribuable à l'augmentation du prix du sapin, du pin, de la pruche, du thuya et de l'épinette. L'indice des produits d'origine végétale a avancé de 1.1 % (de 291.3 à 294.6) en raison d'une augmentation du prix des pommes de terre, des aliments à base de céréales moulues, du thé, du café et du cacao. L'indice des produits chimiques est passé de 249.8 à 252.6 (plus 1.1 %) en raison de l'augmentation du prix des savons et des détergents, des engrais, de la peinture et du matériel de peinture. L'indice des produits du fer et l'indice des minéraux non-métalliques ont tous deux légèrement augmenté, le premier passant de 342.5 à 344.0 et le deuxième, de 241.9 à 242.8.

L'indice général des prix de gros, qui a avancé de 15.1 % depuis mars 1972, ne comprend que relativement peu d'indices de produits finis (des biens de consommation durables, par exemple). Ces produits (dont le prix n'a d'ailleurs que peu varié au cours de la dernière année) sont compris dans l'indice des prix de vente dans l'industrie, (industries manufacturières) qui a avancé de 8.1 % au cours de la même année.

Le tableau ci-dessous présente les variations les plus importantes:

	March 1973 Mars	Feb. 1973 Fév.	March 1972 Mars	Feb. 1972 Fév.	% Change - Changement proportionnel %	
					March - Mars 1973 Feb. - Fév.	March 1973/72 Mars
General wholesale index - Indice général de gros .....	350.0	343.2 <sup>r</sup>	304.0	301.8	+ 2.0	+ 15.1
Vegetable products - Produits d'origine végétale .....	294.6	291.3	241.7	240.3	+ 1.1	+ 21.9
Animal products - Produits d'origine animale .....	427.7	418.3 <sup>r</sup>	363.9	356.5	+ 2.2	+ 17.5
Textile products - Matières textiles .....	309.5	296.4	273.6	272.6	+ 4.4	+ 13.1
Wood products - Produits du bois .....	500.0	489.7 <sup>r</sup>	421.8	422.2	+ 2.1	+ 18.5
Iron products - Produits du fer .....	344.0	342.5 <sup>r</sup>	322.2	321.8	+ 0.4	+ 6.8

Raw and partly manufactured goods - Matières premières et demi-produits .....	326.5	318.3 <sup>r</sup>	266.5	262.1	+ 2.6	+ 22.5
Fully and chiefly manufactured goods - Produits finis ou presque finis .....	363.2	357.4 <sup>r</sup>	325.2	324.3	+ 1.6	+ 11.7

Note: Indexes for 1972 and 1973 are subject to revision. - Nota: Les indices de 1972 et 1973 sont sujets à révision.

## Security Price Indexes (1961=100)

The investors index of common stock prices moved down 1.4 % over February to 189.5; this is the second monthly decrease since the all time high of 194.5 in January. Both industrials and finance registered a loss of 1.4 % to 200.7 and 3.0 % to 183.1 respectively, while utilities remained unchanged at 156.5. Amongst the thirteen industrial sub-groups, losses outnumbered gains: the seven losses ranged from 0.2 % to 144.9 for construction to 7.6 % to 324.7 for petroleum; the six gains ranged from 1.2 % to 379.4 for printing and publishing to 6.1 % to 133.1 for pulp and paper. In the utilities major-group, pipelines and gas distribution registered losses of 5.0 % to 171.1 and 3.4 % to 173.8 which were offset by gains in transportation, telephone and electric power sub-groups. A decline in the finance index resulted from a loss in both sub-groups: banks went down 2.8 % to 210.7, investment and loans eased 3.7 % to 141.8.

In the same period, the index of mining stock prices rose 2.7 % to 126.4 as a result of an increase in golds of 4.1 % to 141.4 and a gain of 1.8 % to 119.3 in base metals.

Of the two supplementary price indexes, uraniums gained 16.2 % to 225.5 while primary oils and gas went down 10.0 % to 489.8.

The preferred stock index eased 0.1 % to 75.3.

## Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, advanced 1.3 % to 352.0 in March from the revised February index of 347.5. Prices were higher for twelve commodities, lower for four and unchanged for fourteen. Principal changes included increases for raw wool, hogs, raw rubber, domestic zinc, domestic copper, tin and steers, while decreases were recorded for linseed oil and beef hides.

## Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets advanced 3.4 % to 350.1 in March from the February index of 338.7. An increase of 3.5 % to 472.4 from 456.6 in the animal products index reflected price increases for raw wool, eggs, hogs and steers on both Eastern and Western markets, and for lambs in the East. Lower prices were shown for lambs and calves on the Western market. The field products index advanced 3.3 % to 227.9 from 220.7 on higher prices for potatoes and hay on both markets, and for oats in the East. Lower prices were shown for rye and flax in the West.

## Farm Input Price Indexes (1961=100) 1st Quarter 1973

The Farm Input Price Index for Canada rose 6.1 % in the 1st quarter of 1973 moving to 153.2 from 144.4 in the 4th quarter of 1972. The Eastern index moved to 155.8 from 144.8 an increase of 7.6 %, while the Western index increased 4.4 % to 150.2 from 143.9. The yearly increase since 1st quarter 1972 was 10.2 % for Canada, 12.4 % for the Eastern region, and 7.7 % for Western Canada.

Between the 4th and 1st quarter, 1972 and 1973, strong price increases for livestock feed (18.0 %), feeder cattle (15.3 %), and seed (31.1 %), pushed the index higher. The larger gain shown in the Eastern index was partly due to the relatively higher weight attached to the feed component index. Other items which contributed significantly to the movement were hired labour, machinery and motor vehicle operation and building replacement in both regions, and fertilizer and mortgage credit in Eastern Canada.

## Indices des cours des valeurs mobilières (1961=100)

L'indice des cours des actions ordinaires a baissé de 1.4 % en février pour s'établir à 189.5; il s'agit de la deuxième baisse mensuelle enregistrée depuis le record absolu de janvier (194.5). Les industrielles et les finances ont accusé une baisse de 1.4 % et de 3.0 % pour s'établir à 200.7 et à 183.1 respectivement, tandis que les services publics demeuraient inchangés à 156.5. Dans les treize sous-groupes industriels, les pertes ont été supérieures aux gains; il y a eu sept pertes qui s'échelonnent de 0.2 % pour la construction (144.9) à 7.6 % pour le pétrole (324.7); quant aux gains ils vont de 1.2 % pour l'impression et l'édition (379.4) à 6.1 % pour les pâtes et papiers (133.1). En ce qui concerne les principaux groupes des services publics, les pipelines et la distribution de gaz ont enregistré des baisses de 5.0 % (171.1) et de 3.4 % (173.8) qui ont été contrebalancées par des gains dans les sous-groupes des transports, du téléphone et de l'électricité. La baisse de l'indice des finances est imputable à une perte dans les sous-groupes: les banques ont accusé une diminution de 2.8 % (210.7) et les placements et prêts, de 3.7 % (141.8).

Au cours de la même période, l'indice des prix des titres miniers a augmenté de 2.7 % pour s'établir à 126.4 à la suite d'une augmentation de 4.1 % des aurifères qui s'inscrivent à 141.4, et à un gain de 1.8 % des métaux communs qui se sont fixés à 119.3.

Pour ce qui est des deux indices des prix supplémentaires, on a observé une hausse de 16.2 % dans le cas de l'uranium qui s'est fixé à 225.5, tandis que le pétrole et le gaz primaires accusaient une baisse de 10.0 % et tombaient à 489.8.

L'indice des actions privilégiées a légèrement avancé (0.1 %) pour s'établir à 75.3.

## Indices des prix de trente matières industrielles (1935-39=100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a progressé de 1.3 % en mars, passant de 352.0 (indice rectifié) en février à 347.5. Les prix de douze marchandises ont augmenté, ceux de quatre ont baissé et ils sont restés inchangés dans le cas de quatorze autres. Les principaux changements comprennent une augmentation des prix de la laine brute, des porcs, du caoutchouc brut, du zinc canadien, du cuivre canadien, de l'étain et des bouvillons; ils comprennent également une baisse des prix de l'huile de lin et des peaux de bœuf.

## Indice des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 3.4 % en mars, passant de 338.7 en février à 350.1. Une hausse de 3.5 % de l'indice des produits d'origine animale, qui passe de 456.6 à 472.4, est imputable à une augmentation des prix de la laine brute, des oeufs, du porc et des bouvillons dans l'Est et dans l'Ouest, et des agneaux dans l'Est. Le prix des agneaux et des veaux dans l'Ouest a baissé. La hausse de 3.3 % de l'indice des produits de grande culture, qui passe de 220.7 à 227.9, est due à une augmentation des prix des pommes de terre et du foin dans l'Est et dans l'Ouest, et de l'avoine dans l'Est. Une baisse des prix du seigle et du lin a été enregistrée dans l'Ouest.

## Indices (1961=100) des prix des entrées dans l'agriculture 1er trimestre 1973

L'indice des prix des entrées dans l'agriculture pour le Canada a augmenté de 6.1 % au 1er trimestre de 1973, passant de 144.4 (4<sup>e</sup> trimestre 1972) à 153.2. L'indice pour l'Est est monté de 144.8 à 155.8, soit une augmentation de 7.6 %, tandis que l'indice pour l'Ouest est passé de 143.9 à 150.2 (+ 4.4 %). L'augmentation annuelle par rapport au 1<sup>er</sup> trimestre 1972 a été de 10.2 % pour le Canada, de 12.4 % pour la région de l'Est et 7.7 % pour l'ouest du Canada.

Entre le 4<sup>e</sup> trimestre de 1972 et le premier trimestre de 1973 de fortes augmentations de prix dans le cas des aliments pour animaux (18.0 %), des bovins d'engraissement (15.3 %) et des semences (31.1 %) ont fait monter l'indice. L'augmentation de l'indice pour l'Est est partiellement attribuable à la supériorité relative du poids rattaché à l'élément "aliments pour animaux". Les autres postes qui ont contribué de façon importante au mouvement de l'indice sont la main-d'oeuvre salariée, l'utilisation des machines et des véhicules automobiles et le remplacement des bâtiments, dans les deux régions, ainsi que les engrais et le crédit hypothécaire, dans l'est du Canada.

ERRATA

See footnote 3 at end of Table 2.

Voir le renvoi 3 à la fin du Tableau 2.

Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless steel products were deleted from the series bars hot rolled (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net mill to mill.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminées à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

000-508

The Consumer Price Index for Canada (1961=100) rose 0.3 % to 145.7 in March from 145.3 in February. Although nearly all major components moved up, most of the impetus behind the latest month's advance was attributable to increases in the Food and in the Housing elements, which went up 0.4 % and 0.3 %, respectively. In the latest month, the level of prices for All-Items other than Food was 0.2 % higher. The components for transportation and for Recreation and Reading rose 0.3 %. Both the Clothing and the Tobacco and Alcohol indexes edged up 0.1 %, while no change was recorded for the element for Health and Personal Care. Between March 1972 and March 1973, the All-Items Index advanced 6.0 %.

The Food index rose 0.4 % to 152.2 in March from 151.6 in February, contrasting with decreases which occurred between these two months in each of the preceding six years, except 1971 when food prices were moving up from an unusual low. In the latest month, both the food at home and the restaurant meal components rose 0.4 %. Among home-consumed foods, although prices for eggs and for some grocery items declined, most major components continued to register advances. The index for meat, fish and poultry rose 2.2 % mainly because of advances in pork and poultry prices of 0.0 % and 6.1 %, respectively; beef prices moved up 0.0 %. Since March 1972, the meat, fish and poultry index increased over 18 %, with the price of pork rising, on average, more than 27 % and poultry and beef over 20 % and 14 %, respectively. In the latest month, fruit prices, which normally rise at this time of year, increased on average 3.0 % despite a small decline in the price of bananas for the fifth successive month. Higher prices for fresh vegetables, except tomatoes and carrots, led to a 1.0 % increase in the vegetable index. Though egg prices, which normally fall at this time of year, declined 5.3 % between February and March, they were still 47 % above their level of a year earlier. In the latest month, the price of fresh milk rose 0.4 % as higher quotations were registered in a number of centres, including Vancouver, St. John's and Charlottetown; the bakery and cereal products index also increased 0.4 % as prices for most baked goods, including bread, moved upwards. Price declines, however, were recorded for a number of other items. Soft drinks, from which the federal sales tax was recently removed, went down over 1 % as price decreases took effect in most centres across the country. Coffee and tea prices were also somewhat lower in March, as were prices for sugar, flour and chocolate bars. In the twelve months since March 1972, the Food index advanced 11.0 % with the price of food consumed at home rising 11.3 % and that for restaurant meals 9.6 %.

The Housing index rose 0.3 % to 149.5 in March from 149.0 in February as a result of increases of 0.4 % and 0.2 % in the shelter and household operation components, respectively. Within shelter, the homeownership element moved up 0.5 % mainly because of increases in the indexes for new houses and homeowner pairs; rents rose 0.1 %. Among household operation items, electricity rates increased in Sudbury and in Edmonton, and telephone charges also rose in Edmonton. Furniture prices moved up 0.2 % as higher quotations for mattresses and bedroom and dinette suites outweighed sales on living room suites and kitchen sets. Compliance prices rose 0.4 % as higher quotations for several items, including sewing machines and electric irons, outweighed lower sale prices on others, such as automatic dryers and electric frying pans. A 0.8 % increase in household textiles prices was recorded,

L'indice des prix à la consommation au Canada (1961=100) a augmenté de 0.3 % pour passer de 145.3 en février à 145.7 en mars. Bien que presque tous les principaux éléments aient progressé, la plus grande partie de l'avance du mois dernier est attribuable aux augmentations des prix de l'alimentation et de l'habitation respectivement égales à 0.4 % et 0.3 %. En mars, le niveau des prix de tous les éléments autres que l'alimentation est monté de 0.2 %. Les éléments des transports et des loisirs et lecture ont progressé de 0.3 %. Les indices de l'habillement et des tabacs et alcools ont tous deux légèrement augmenté (0.1 %) tandis qu'on n'enregistrait aucun changement dans les soins personnels et de santé. De mars 1972 à mars 1973, l'indice de tous les éléments a avancé de 6.0 %.

L'indice de l'alimentation a progressé de 0.4 % pour atteindre 152.2 en mars contre 151.6 en février par opposition aux diminutions enregistrées entre ces deux mois au cours des six années précédentes, sauf en 1971 où les prix des aliments étaient à la hausse par rapport à leur niveau exceptionnellement bas. Au cours du mois dernier, les éléments de l'alimentation au foyer et des repas pris au restaurant ont tous deux augmenté de 0.4 %. Bien que le prix des oeufs et de quelques articles d'épicerie aient baissé parmi les aliments consommés au foyer, la plupart des principaux éléments a continué d'enregistrer des avances. L'indice des prix de la viande, du poisson et de la volaille a progressé de 2.2 % principalement en raison de l'avance des prix du porc et de la volaille respectivement égale à 3.0 % et à 6.1 %; le prix du boeuf a augmenté de 1.0 %. Depuis mars 1972, l'indice des prix de la viande, du poisson et de la volaille a progressé de plus de 18 %, le prix du porc augmentant en moyenne de plus de 27 % et la volaille et le boeuf enregistrant des hausses respectives de 20 % et 14 %. Au cours du mois dernier, le prix des fruits, qui augmente normalement à cette époque de l'année a progressé au moyenne de 3.0 % malgré la légère baisse du prix des bananes pour un cinquième mois consécutif. La hausse du prix des légumes frais, sauf celui des tomates et des carottes s'est traduit par une augmentation de 1.0 % de l'indice des prix des légumes. De février à mars, le prix des oeufs a diminué de 5.3 % ce qui est normal à cette époque-ci de l'année; malgré cette baisse les prix étaient encore de 47 % supérieurs à ceux de l'année précédente à pareille date. Au cours du mois dernier, le prix du lait frais a augmenté de 0.4 % du fait des augmentations dans certaines villes Vancouver, St.-Jean (T.-N.) et Charlottetown; l'indice des prix des produits de boulangerie et des produits céréaliers a également augmenté de 0.4 % en raison de la hausse du prix de la pâtisserie et du pain. On a toutefois enregistré des diminutions du prix de certains éléments, notamment en ce qui concerne les boissons gazeuses qui ont récemment été dégrevées de la taxe fédérale et dont le prix a baissé de plus de 5 %, des diminutions de prix s'étant produites dans la plupart des villes canadiennes. Le prix du café et du thé a également été légèrement inférieur en mars, tout comme le prix du sucre, des poudres à gelées et des barres de chocolat. Depuis mars 1972, l'indice des prix de l'alimentation a avancé de 11.0 %, le prix des aliments consommés au foyer progressant de 11.3 % et le prix des repas pris au restaurant augmentant de 9.6 %.

L'indice de l'habitation a avancé de 0.3 % pour se chiffrer à 149.5 en mars contre 149.0 en février traduisant ainsi les hausses respectives de 0.4 % et de 0.2 % du logement et de l'entretien du ménage. Dans le groupe du logement, les frais de propriété ont augmenté de 0.5 % surtout en raison des augmentations des indices des prix des maisons neuves et des réparations à la charge du propriétaire; les loyers ont augmenté de 0.1 %. Dans le groupe de l'entretien du ménage, les taux de l'électricité ont monté à Sudbury et à Edmonton où les frais téléphoniques ont également progressé. Le prix des meubles a augmenté de 0.2 % en raison de la hausse du prix des matelas, des meubles de chambre à coucher et des meubles de cuisine qui ont eu davantage de poids que l'effet des soldes de meubles de salle de séjour et de meubles de cuisine. Les prix des appareils électroménagers ont été de 0.4 % supérieurs en raison de l'augmentation des prix de plusieurs éléments, notamment des machines à coudre, des fers à repasser électriques,

while the index for floor coverings dipped 0.5 %. Still in the household operation category, dishes and a number of cleaning supplies registered scattered price increases; in contrast, light bulbs and toilet paper moved lower in price. Between March 1972 and March 1973, the Housing index advanced 5.9 %.

The Clothing index edged up 0.1 % to 134.5 in March from 134.4 in February as higher prices for men's wear and for clothing services outweighed lower prices for children's clothing and footwear. A 1.7 % rise in the men's wear index reflected higher quotations for many items including suits, shirts, underwear and hosiery. Clothing service charges advanced 2.0 % due to higher prices for laundry, dry cleaning and shoe repair. Lesser advances of 0.8 % and 0.2 % were registered for piece goods and for women's wear, respectively. On the other hand, children's wear and children's footwear prices decreased by 4.2 % and 3.4 %, respectively, reflecting reductions in a number of retail outlets following removal of the federal sales tax on children's garments and children's shoes. Between March 1972 and March 1973, the Clothing index rose 3.3 %.

The Transportation index rose 0.3 % to 133.9 in March from 133.5 in February mainly as a result of a 0.3 % increase in the automobile operation component. Although new car prices edged down slightly since the preceding month, automobile repair and lubrication charges as well as battery prices advanced in most cities surveyed. Car licensing fees moved up in Ontario. On the other hand, sales in a number of cities across the country led to a decrease of 4.5 % in tire prices. The local transportation index rose 0.3 % mainly because of higher local bus fares in Halifax, Sherbrooke, Windsor and Regina, as well as increased taxi fares in Regina. In the twelve months to March 1973, the Transportation index rose 0.8 %.

In March 1973, the Health and Personal Care index remained unchanged from its previous month's level of 152.8, and stood 3.7 % above its March 1972 mark. In the latest month pharmaceutical prices rose marginally reflecting higher quotations for prescribed and non-prescribed medicines. Amongst items of personal care supplies, higher prices for toilet soap, toothbrushes, cleansing tissues and sanitary napkins were offset by reductions for toothpaste, razor blades, face powder and shaving cream.

The Recreation and Reading index rose 0.3 % to 142.5 in March from 142.1 in February. The main contributor to this increase was an advance of 0.4 % in the recreation element as higher prices for bicycles, television repairs, toys and camera film (including processing) outweighed lower quotations for stereo combinations and television sets. The reading index rose marginally because of increased newspaper subscription rates in St. John's. Between March 1972 and March 1973, the Recreation and Reading index increased 3.0 %.

The Tobacco and Alcohol index edged up 0.1 % to 135.8 in March from 135.7 in February reflecting higher prices in Saskatchewan for cigarettes. Between March 1972 and March 1973, the Tobacco and Alcohol index increased 4.8 %.

qui ont eu davantage de poids que la diminution des prix de solde d'autres éléments tels que les sècheuses automatiques et les poêlons électriques. Les prix des textiles à usage ménager ont augmenté de 0.8 % tandis que l'indice des revêtements de sol fléchissait de 0.5 %. Toujours dans la catégorie de l'entretien de l'habitation, on a enregistré des augmentations éparées des prix de la vaisselle et de certains produits de nettoyage; par contre, le prix des ampoules électriques et du papier hygiénique a baissé. De mars 1972 à mars 1973, l'avance de l'indice de l'habitation a été de 5.9 %.

L'indice du vêtement a progressé de 0.1 %, passant de 134.4 en février à 134.5 en mars; et ce du fait que la hausse du prix des vêtements pour hommes et des services d'habillement eu d'avantage de poids que la baisse du prix des vêtements et des chaussures pour enfants. L'avance de 1.7 % de l'indice des vêtements pour hommes est attribuable à la hausse des prix de nombreux articles, dont les complets, les chemises, les sous-vêtements et les bas. Les prix des services d'habillement ont progressé de 2.0 % par suite de l'augmentation du coût du blanchissage, du nettoyage à sec et de la réparation de chaussures. Le tissu à la verge et les vêtements pour femmes ont présenté une hausse moins importante de 0.8 % et 0.2 % respectivement. Par ailleurs, les prix des vêtements et des chaussures pour enfants ont décliné respectivement de 4.2 % et de 3.4 %, baisse qui s'explique par une réduction des prix chez certains détaillants à la suite de la suppression de la taxe de vente fédérale sur les vêtements et les chaussures pour enfants. De mars 1972 à mars 1973, l'indice de l'habillement a progressé de 3.3 %.

L'indice du transport a monté de 0.3 %, passant de 133.5 en février à 133.9 en mars, principalement à la suite d'une hausse de 0.3 % des frais d'automobile. Bien que le prix des nouvelles voitures ait légèrement fléchi par rapport au mois précédent, on a enregistré dans la plupart des villes enquêtées une progression des frais de réparation et de graissage d'automobiles, ainsi que du prix des accumulateurs. Les frais d'immatriculation ont monté en Ontario. D'autre part, dans plusieurs villes du pays, les soldes ont amené une diminution de 4.5 % du prix des pneus. L'indice du transport local a progressé de 0.3 %, surtout par suite de la hausse des tarifs des services de transport local par autobus à Halifax, Sherbrooke, Windsor et Régina et du transport par taxi à Régina. Au cours des douze mois précédents mars 1973, l'avance de l'indice du transport a été de 0.8 %.

De février à mars 1973, il n'y a eu aucun mouvement de l'indice des soins personnels et de la santé établi à 152.8 et de ce fait supérieur de 3.7 % au niveau de mars 1972. Au cours du dernier mois, les prix des produits pharmaceutiques ont très faiblement progressé en raison de hausse du pris des produits délivrés sur ordonnance et sans ordonnance. Pour ce qui est des articles destinés aux soins personnels, l'augmentation des prix du savon de toilette, des brosses à dents, du papier à démaquiller et des serviettes hygiéniques a été contrebalancée par la réduction des prix de la pâte dentifrice, des lames de rasoir, de la poudre de riz et de la crème à raser.

L'indice des loisirs et de la lecture a progressé de 0.3 %, passant de 142.1 en février à 142.5 en mars. Cette progression est attribuable au premier chef à l'avance de 0.4 % de l'élément des loisirs qui s'explique par le fait que la hausse du prix des bicyclettes, de la réparation de téléviseurs, des jouets et de la pellicule photographique (y compris le développement) ont eu davantage de poids que la baisse de prix des ensembles stéréophoniques et des téléviseurs. L'indice de la lecture a présenté une légère avance par suite de l'augmentation des tarifs d'abonnement aux journaux à Saint-Jean(T.-N.). De mars 1972 à mars 1973, l'indice des loisirs et de la lecture a progressé de 3.0 %.

L'indice du tabac et des alcools a progressé de 0.1 %, se fixant à 135.8 en mars contre 135.7 en février; cette progression a été causée par une hausse du prix des cigarettes en Saskatchewan. De mars 1972 à mars 1973, la progression de l'indice du tabac et des alcools a été de 4.8 %.

Consumer price movements, when classified by commodities and services, offer another view of the incidence of price change. Between February and March the services index advanced 0.5 % chiefly because of higher charges for shelter services, clothing services, automobile repairs and chassis lubrication, and television repairs together with increased local transit and taxi fares and telephone rates. The total commodities index edged up 0.1 % chiefly as a result of 0.4 % higher food prices. The index for non-durable commodities other than food rose 0.1 % as higher prices for adults' clothing, toys, camera film, cigarettes, drugs and household cleaning supplies outweighed reductions for children's clothing. A 0.2 % decrease in the durables component resulted from lower quotations for some electrical appliances (notably television sets and stereo combinations), floor coverings, automobile tires and new cars outweighing higher prices for automobile batteries, bicycles, and furniture. In the twelve months to March 1973, the total commodities index advanced 6.1 % while the services component increased 8 %.

Si l'on classe les articles qui entrent dans l'indice des prix à la consommation par biens et services, on obtient une image différente du mouvement des prix. De février à mars, l'indice des services a progressé de 0.5 % en grande partie à cause de la hausse du prix des services de logement, d'habillement, de réparation et de graissage d'automobiles, réparation de téléviseurs, ainsi que d'une augmentation des tarifs de transports en commun et de transport par taxi et des tarifs téléphoniques. L'indice global des biens a progressé de 0.1 % principalement par suite d'une montée de 0.4 % du prix des aliments. L'avance de l'indice des biens non durables (sauf les aliments) a été de 0.1 %. Elle est imputable au fait que la hausse des prix des vêtements pour adultes, des jouets, de la pellicule photographique, des cigarettes, des médicaments et des produits ménagers de nettoyage a eu davantage de poids que la réduction de prix des vêtements pour enfants. Le fléchissement de 0.2 % des biens durables a eu pour cause une baisse des prix de certains appareils électriques (notamment des téléviseurs et des ensembles stéréophoniques), des vêtements de sol, des pneus d'automobiles et des voitures neuves, baisse qui a eu davantage de poids que l'augmentation des prix des accumulateurs d'automobiles, des bicyclettes et des meubles. Au cours des douze mois précédant mars 1973, l'indice global des biens a progressé de 6.1 % et l'indice des services de 5.8 %.

TABLE 1. Summary of Current Price Indexes

TABLEAU 1. Récapitulation des indices des prix courants

Transportation - Transport .....	352.6	338.0	295.1	292.5	+ 4.3	+ 0.9	+ 19.5
Telephone - Téléphone .....	90.0	89.6	94.0	94.0	+ 0.4	-	- 4.3
Electric power - Énergie électrique .....	122.8	122.0	125.0	129.6	+ 0.7	- 3.5	- 1.8
Gas distribution - Distribution du gaz .....	173.8	179.9	202.0	205.4	- 3.4	- 1.7	- 14.0
Finance - Total - Finances .....	183.1	188.7	172.3	181.7	- 3.0	- 5.2	+ 6.3
Banks - Banques .....	210.7	216.7	201.4	213.8	- 2.8	- 5.8	+ 4.6
Investment and loan - Placements et prêts .....	141.8	147.2	127.6	131.6	- 3.7	- 3.0	+ 11.1
<b>Mining stocks - Actions miniers</b>							
General index - Indice général .....	126.4	123.1	116.1	106.5	+ 2.7	+ 9.0	+ 8.9
Gold - Or .....	141.4	135.8	105.6	101.8	+ 4.1	+ 3.7	+ 33.9
Base metals - Métaux communs .....	119.3	117.2	122.8	110.0	+ 1.8	+ 11.6	- 2.9
<b>Supplementary indexes - Indices supplémentaires</b>							
Uranium - L'uranium .....	225.5	194.0	167.6	154.1	+ 16.2	+ 8.8	+ 34.5
Primary oils and gas - Pétrole et gaz primaires .....	489.8	544.4	455.5	439.9	- 10.0	+ 3.5	+ 7.5

- (1) Gross weighted, including inter-industry shipments. For explanation see page 88. Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 88.
- (2) Indexes for 1973 are subject to revision. - Les indices pour 1973 sont sujets à révision.
- (3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1972 are subject to revision. See notes page 88 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1972 sont sujets à révision. Voir les renvois de la page 88 pour les prix détaillés des grains de l'Ouest.

- (1) Indexes for 1972 and 1973 are subject to revision. - Les indices pour 1972 et 1973 sont sujets à révision.  
 (2) 1972 figures have been revised for Industry and Commodity indexes in 2910. - Les indices 1972 ont été révisés en qui concerne l'industrie et les produits de la rubrique de 2910.  
 (3) Effective January 1973, changes have been made in the calculation of this index. See details in errata. - A compter de janvier 1973, on a modifié le calcul de cet indice. Voir les détails inclus dans l'erratum.  
 (4) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre .....	95.1	92.3
January - 1971 - Janvier .....	95.1	92.1
Average - 1971 - Moyenne .....	95.2	91.8

- (5) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisée à partir de janvier 1969. Une liste augment des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certain produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.  
 (6) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88

Pickles, sweet, mixed - Cornichons sucrés variés .....	137.8	137.5	131.9	130.7	133.1	127.7	125.3
Jelly powders, flavoured - Gelée en poudre aromatisée .....	128.2	131.5	128.3	129.2	127.7	121.5	118.0

(1) Includes cuts with bone-in and boned and rolled. - Y compris les morceaux avec os, sans os et roulés.

(2) Includes cuts with blade-in and blade removed. - Y compris les morceaux avec ou sans palette.

(3) 1965=100. - 100 en 1965.

(4) Indexes based on chain store prices in 7 cities. - Les indices sont fondés sur les prix dans les magasins à succursales multiples de 7 villes.

(5) Indexes based on prices in 16 cities. - Les indices sont fondés sur les prix dans 16 villes.

(6) 1963=100. - 100 en 1963.

(7) Indexes based on prices for pectin and pure jam combined. - Les indices sont basés sur les prix de la confiture avec pectine et de la confiture pure.

(8) June 1968=100. - 100 en juin 1968.

TABLE 11. Consumer Price Indexes, Regional Cities, 1962-73(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines, 1962-73(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) For explanation see page 91. - Pour de plus amples explications, voir la page 91.

(2) The shelter element of regional cities housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and homeownership costs. See also page 91. - Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir la page 91.

(3) Includes shelter and household operation. The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home-ownership costs. See also page 91. - Comprend le logement et l'entretien du ménage. Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir aussi la page 91.

(1) Indexes for current year are subject to revision. Les données de l'année courante sont sujettes à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. - L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

- (1,2) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
- (2) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contract profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.
- (3) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (4) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (5) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Explanation of Methods Used and Additional  
Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961=100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15<sup>th</sup> of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

Purchase Price Indexes of Secondary Metals  
(1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1, 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14 % at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1971 - July 1972 were announced on February 13, 1973 for wheat and oats. No final payment was granted for barley.

Explication des méthodes utilisées et sources  
supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix des livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

Indices du prix d'achat des métaux de deuxième fusion  
(1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. A compter du 1<sup>er</sup> août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14 %) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1971 à juillet 1972 ont été annoncés le 13 février 1973, en ce qui concerne le blé et l'avoine. Il n'y a pas eu de dernier paiement pour l'orge.

#### General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things

#### Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En

are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials,  
1935-39 = 100

The price index of thirty industrial materials is calculated as an unweighted geometric average prices of the selected commodities. The formula is as follows:

$$\frac{\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}{\sqrt[30]{P_{t \ 35-39}^1 \times P_{t \ 35-39}^2 \times P_{t \ 35-39}^3 \times \dots \times P_{t \ 35-39}^{30}}}$$

The selection of materials for pricing related to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyres type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupe de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter Wholesale Price Indexes 1913-50 (Reference Paper No. 24) et Prices and Price Indexes 1949-52 (Vol. 23) (n° 62-501 au catalogue).

Indice des prix de trente matières industrielles  
(1939-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\frac{\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}{\sqrt[30]{P_{t \ 35-39}^1 \times P_{t \ 35-39}^2 \times P_{t \ 35-39}^3 \times \dots \times P_{t \ 35-39}^{30}}}$$

Le choix des matières servant au prélèvement des prix se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

## Retail Price Indexes

### Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services of items for which there is a continually measurable market price over time, corresponding to a specific quantity of the item.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index is unlikely to represent closely the experience of any one family within the group nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families - (a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In 1952, the time base was updated to 1949=100 from 1935-39=100 and, at the same time, weights were revised to reflect family expenditure patterns in 1947-48. A subsequent revision of weights based on 1957 expenditures was introduced at the beginning of 1961 and the time base was revised from 1949=100 to 1961=100 at the beginning of 1969.

Full details on the latest weighting patterns and time base revisions are available in the occasional paper "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures", Statistics Canada Catalogue No. 62-518 and in the January 1969 issue of the monthly bulletin, Prices and Price Indexes, Catalogue No. 62-002.

### Consumer Price Indexes for Regional Cities (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). The regional indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada except for their individual weighting systems.

Also, city indexes are not as comprehensive in price content as the Canada consumer price index and may underestimate slightly the degree of price movements occurring. In this connection, the shelter component of the city indexes moves on the basis of changes in rents only, whereas changes in both rents and homeownership costs are included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and all-items indexes for cities have tended to underestimate somewhat the rates of price increase, particularly over longer periods. Studies are under way to incorporate homeownership prices in city indexes.

Each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

## Indices des prix de détail

### Indice des prix à la consommation au Canada (1961=100)

L'indice des prix à la consommation sert à mesurer le taux de variation du prix qu'il en coûte pour acheter un "panier" de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" demeure le même; il équivaut tout au moins à une quantité égale de biens et services de qualité égale; de plus, il est constitué de produits pour lesquels on peut toujours trouver sur le marché un prix mesurable et correspondant à une quantité déterminée de ce produit.

L'indice porte sur un groupe étendu mais bien déterminé de familles urbaines et rend compte des variations des prix auxquelles l'échantillon en question a dû faire face. Il est fort peu probable que l'indice représente fidèlement l'expérience d'une famille en particulier; de même, il ne faut pas s'attendre à ce qu'il rende compte des variations des prix auxquelles ont fait face des groupes sensiblement différents par le revenu, la taille de la famille et le lieu de résidence. L'échantillon sur lequel porte l'indice est composé de familles - a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille oscille entre deux adultes et deux adultes avec quatre enfants et c) dont le revenu annuel en 1957 oscillait entre \$2,500 et \$7,000. Pour évaluer l'influence des variations de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation porte sur les variations d'environ 300 articles.

L'indice des prix à la consommation au Canada remonte au début du siècle; depuis lors, on a révisé périodiquement la période de référence et les schémas de pondération. Ainsi, en 1952, la période de référence est passée de 1935-1939=100 à 1949=100; à la même occasion, les poids ont été revus de façon à présenter un reflet de la structure des dépenses des familles en 1947-48. La révision suivante des facteurs de pondération était fondée sur les dépenses des consommateurs en 1957 et fut introduite au début de 1961. Enfin, c'est au début de 1969 qu'on porta la période de 1949=100 à 1961=100.

Le lecteur trouvera de plus amples renseignements sur les dernières révisions du schéma de pondération et de la période de référence dans la publication occasionnelle "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures" (n° 62-518) et dans la livraison de janvier 1969 du bulletin mensuel "Prices and Price Indexes" (n° 62-002).

### Indices des prix à la consommation dans certaines agglomérations urbaines (1961=100)

Ces indices sont publiés mensuellement dans le présent bulletin (voir Tableau 11). Par leur conception et par les éléments qui les composent, ces indices sont en général similaires à l'indice des prix à la consommation au Canada, seuls leurs coefficients de pondération diffèrent.

Aussi, les indices de prix dans les villes ne représentent pas les prix de façon aussi complète que l'indice des prix à la consommation au Canada et ils peuvent sous-estimer légèrement l'importance des mouvements de prix. C'est ainsi que l'élément "logement" des indices des villes varie en fonction des changements dans les loyers uniquement, alors que l'indice pour l'ensemble du Canada comprend les loyers et les coûts de propriété. A la suite d'une augmentation des coûts de propriété plus rapide que celle des loyers, les indices de l'habitation et de tous les éléments pour les villes ont tendu à sous-estimer quelque peu les taux de croissance des prix, surtout sur de plus longues périodes de temps. On étudie actuellement l'incorporation des prix de propriété dans les indices des villes.

Chaque indice est conçu de façon à mesurer les conséquences des variations des prix de détail survenues dans les agglomérations en question sur le prix d'un panier constant de biens et de services représentant la consommation d'un groupe représentatif de familles appartenant à ces secteurs.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another.

For comparisons of retail price differentials between cities see Table 14 of this publication and the relevant explanatory note.

Historical Consumer Price Indexes (1969=100) for "Thunder Bay" and "Quebec City" are available, with explanatory notes on request from Retail Prices Section, Prices Division, Statistics Canada.

#### Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise, or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 % rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25 % rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price increase. The adjusted average is  $\$90.91$  ( $100.0/110.0 \times \$100.$ ), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as equal to 100.0, the week B index becomes 113.6 ( $90.91/80.00 \times 100.0$ ). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 13.6 % more goods and services than those received in week A, in spite of a 10 % rise in consumer prices. This 13.6 % increase in real wages compares with the rise of 25 % in money wages ( $100.00/80.00 \times 100.0$ ).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered

Le lecteur devra toujours garder en mémoire que ces indices ne sont pas des indicateurs qui permettent de comparer le niveau des prix d'une ville à l'autre et qu'ils n'indiquent en aucune façon si les prix sont plus ou moins élevés dans une ville que dans une autre.

Pour étudier les différences de prix au détail entre les villes, il faut consulter le Tableau 14 de ce bulletin et les notes explicatives qui l'accompagnent.

Les indices chronologiques des prix à la consommation (1969=100) pour Québec et Thunder Bay et les notes explicatives qui les accompagnent peuvent être obtenus de la Section des prix de détail de la Division des prix de Statistique Canada.

#### Calcul du pouvoir d'achat

Toute variation des prix à la consommation influe directement sur la quantité de biens et de services qu'on peut acheter avec un dollar et par conséquent sur le revenu moyen. Pour mesurer le revenu en tenant compte de la variation des prix à la consommation, on peut déduire du revenu moyen réel le montant proportionnel qui correspond à l'augmentation des prix à la consommation ou ajouter au revenu réel le montant qui équivaut à la diminution des prix à la consommation. Ces moyennes corrigées peuvent ensuite servir à déterminer la quantité de biens et de services qu'on aurait pu acheter grâce à un revenu moyen, les prix à la consommation et les habitudes de consommation n'ayant pas changé. On trouvera ci-dessous des exemples de cette méthode.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B et que dans la même période de temps l'indice des prix à la consommation progresse de 100.0 à 110.0. En raison de l'augmentation de 10 % des prix à la consommation, on n'obtiendrait pas plus avec \$1 au cours de la semaine B que pendant la semaine A. De même il serait exagéré de dire que, pour une augmentation de la rémunération de \$80 à \$100 le pouvoir d'achat du salaire hebdomadaire moyen s'est élevé de 25 %. On peut ramener cette augmentation à des proportions plus justes en déduisant du nouveau salaire hebdomadaire moyen l'augmentation des prix à la consommation. La rémunération moyenne corrigée s'établira donc à \$90.91 ( $100.0/110.0 \times \$100.$ ), dont on peut dire qu'elle exprime la rémunération hebdomadaire moyenne de semaine B en dollars de la semaine A, ou encore qu'elle rend compte du niveau effectif de la rémunération hebdomadaire de semaine B par rapport à la semaine A.

On peut pousser plus loin les calculs et exprimer à l'aide d'un indice la relation entre le salaire moyen de la semaine A (\$80) et celui de la semaine B (\$90.91). Ainsi, si l'on considère que la rémunération moyenne de \$80 de la semaine A était égale à 100.0, l'indice de la semaine B deviendra 113.6 ( $90.91/80.00 \times 100.0$ ). On pourrait appeler cet indice l'indice de la rémunération hebdomadaire effective; il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6 % de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10 % des prix à la consommation. L'augmentation de 25 % des salaires se ramène donc à une augmentation effective de 13.6 % ( $100.0/80.00 \times 100.0$ ).

Il convient de souligner que, même si les estimations de la rémunération moyenne effective résument assez bien la situation d'un large éventail de travailleurs, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur le revenu porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur le revenu ajustées par l'indice des prix à la consommation (les habitudes de consommation étant "fixes") perdront graduellement de leur

ess valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.

#### Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned.) While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons efforts were made to achieve comparability by equating quantities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices by equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were

valeur. Enfin, il ne faut pas oublier qu'une partie du revenu peut être consacrée à l'épargne et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations du revenu effectif calculées à partir de moyennes du revenu brut peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés et de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente la rémunération tant réelle qu'effective prend pour base l'année 1961. Toutefois, les ajustements illustrés dans les exemples ci-dessus peuvent s'appliquer à tout niveau de référence; la variation proportionnelle entre deux périodes sera en effet identique quelle que soit la période de référence choisie.

#### Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix aux quels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporterait l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prices and Price Indexes* (n° 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves, pour lesquelles les dif-

derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

It should be noted that the retail prices used in this comparisons, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

#### Farm Input Price Indexes (1961=100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961=100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39=100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, Farm Input Price Indexes, 1961=100, Catalogue No. 62-534, and is reproduced in the September 1971 issue of Prices and Price Indexes, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, Farm Input Price Indexes, 1961=100, Catalogue No. 62-004, and in the monthly publication Prices and Price Indexes, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

férences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

#### Indices de prix des entrées dans l'agriculture (1961=100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961=100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39=100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série Farm Input Price Indexes, 1961=100 (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans Prices and Price Indexes de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel Farm Input Price Indexes, 1961=100 (n° 62-004) et dans le bulletin annuel Prices and Price Indexes (n° 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de le publier.

## Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the Globe and Mail and the Montreal Gazette. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of prices in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Investors Index and Preferred Index, see Prices and Price Indexes for February 1973.

## Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of Prices and Price Indexes, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators<sup>(1)</sup> providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

<sup>(1)</sup> National Income and Expenditure Division, Statistics Canada.

## Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placeur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture de la Bourse du jeudi indiqués dans le Globe and Mail et dans la Montreal Gazette. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base de 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâtes et papiers, et huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipe-lines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans Prix et indices des prix de février 1973.

## Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans Prices and Price Indexes de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement<sup>(1)</sup> des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

<sup>(1)</sup> Division du revenu national et de la défense nationale, Statistique Canada.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961=100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

#### Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the Construction Collective Agreement Survey Service provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

#### Highway Construction Price Indexes (1961=100)(3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956=100 time base. Users are warned that an

(2) Industry Selling Price Indexes 1956-1968  
Cat. 62-528.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.(2) Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961=100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

#### Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication Prix et indices des prix (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service Statistique des prix dans la construction (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication Construction Collective Agreement Survey Service de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicat ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

#### Indices des prix de la construction routière (1961=100)(3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961=100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956=100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices

(2) Indices des prix de vente dans l'industrie, 1956-1968,  
no 62-528 au catalogue.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période du 1<sup>er</sup> avril 1968 au 31 mars 1969.

regation of the converted major group indexes with published weights will not yield the published =100 all items indexes. The conversion does not solve this problem for a user wishing to reweight the converted major group indexes using weights appropriate to his own purpose.

Base-weighted indexes are published annually and, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more is determined by specified provincial governments during the base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only estimates of prices change from year to year, and indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of Prices and Price Indexes, Catalogue 62-002 and pages 9 & 10 of reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and in historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price change for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway department. Prices of highway construction work are equal weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of materials are supply prices paid by government departments to suppliers.

#### Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961=100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de Prices and Price Indexes (n° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé Price Indexes of Highway Construction in Canada (n° 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix des matériaux fournis sont les prix payés par les ministères aux fournisseurs.

#### Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - line-men and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent donc certains lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se reporter aux Sections III et XI de la publication Price Indexes of Electrical Utility Construction (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité des fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on a fait entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation de réseaux de distribution, lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses en main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated are derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

#### Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation, permanent houses, etc.

#### Price Indexes of Machinery & Equipment

In response to the need of users wishing either correct expenditure data of machinery and equipment or price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either from the U.S. Bureau of Labour Statistics commodity indexes or from the Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

#### Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice des centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

#### Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente des fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En

preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix des marchandises, compte tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

Indice des prix de vente dans l'industrie

APRIL - 1973 - AVRIL

ERRATA

See footnote 3 at end of Table 2.

Voir le renvoi 3 à la fin du Tableau 2.

"Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

The concept of price change measured is net return to mill.

"Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminées à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

#### SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. Figures not available.
- ... Figures not appropriate or not applicable.
- \_ Nil or zero.
- Amount too small to be expressed.
- p Preliminary figures.
- r Revised figures.
- x Confidential to meet secrecy requirements of the Statistics Act.

#### SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. Nombres indisponibles.
- ... N'ayant pas lieu de figurer.
- \_ Néant ou zéro.
- Nombres infimes.
- p Nombres provisoires.
- r Nombres rectifiés.
- x Confidentiels en vertu des dispositions de La Loi sur la statistique relatives au secret.

# NOTES ON PRICES AND PRICE INDEX NUMBERS

## Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index (Total Manufacturing) moved 0.9 % higher in April to 137.7 from the March index of 136.5. It was 8.9 % higher than the April 1972 index of 126.5. There was a significant slowing down in the month to month rate of increase in prices of food and food-related industries, because of sharp declines in pork prices. However, the total ISPI (Manufacturing) excluding foods, continued to show significant monthly increases; December-January + 1.4 %, January-February + 0.7 %, February-March + 1.5 %, and March-April + 1.0 %.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were price increases registered in the wood products group, particularly for the sawmills and planing mills, and sash and door and other millwork plants industries. The food and beverages group continued to rise as higher prices recorded in the pasteurizing plants, butter and cheese plants, and condenser industries more than offset lower prices registered in the slaughtering and meat packing plants industry.

Further advances in the paper and allied products group reflected price increases in the pulp and paper industry. Decreases in April were relatively insignificant.

## March to April Changes in Industry Indexes

## Variations de mars à avril des indices dans l'industrie

# NOTES SUR LES PRIX ET LES INDICES DE PRIX

## Indice des prix de vente dans l'industrie: Industries manufacturières (1961=100)

L'indice des prix de vente dans l'industrie (fabrication) a augmenté de 0.9 % en avril pour s'établir à 137.7, contre 136.5 en mars. Il était de 8.9 % plus élevé que celui d'avril 1972 (126.5). Le taux mensuel d'augmentation des prix dans les industries alimentaires et connexes a régressé de façon sensible en raison d'une baisse considérable des prix du porc. Toutefois, l'indice total (fabrication), à l'exception des aliments, a continué à enregistrer des augmentations sensibles chaque mois: 1.4 % de décembre à janvier, 0.7 % de janvier à février, 1.5 % de février à mars, 1.0 % de mars à avril.

Les principaux facteurs qui ont contribué à faire varier l'indice total ont été les hausses de prix dans le groupe des produits du bois, en particulier dans les scieries et, dans l'industrie des portes, châssis et autres bois ouvrés. Le groupe des aliments et boissons a continué sa progression du fait que la hausse des prix dans les usines de pasteurisation, les beurrieres et fromageries et les industries des produits condensés a plus que compensé la baisse des prix dans l'industrie de l'abattage et du conditionnement de la viande.

L'accroissement de l'indice dans l'industrie du papier et des activités annexes est attribuable à une augmentation du prix dans l'industrie des pâtes et papiers. En avril, les diminutions ont été relativement minimes.

# General Wholesale Index (1935-39=100)

The general wholesale index moved up 0.8 % in April to 353.6 from the revised March index of 350.9. It was 16.5 % higher than the April 1972 index of 303.4. Six of the eight major group indexes were higher, while two declined.

The vegetable products group index rose 1.8 % in April to 299.9 from 294.7 on higher prices for dried fruits, vegetable oils and products, sugar and its products, and tea, coffee and cocoa. An advance of 1.5 % to 305.7 from 301.2 in the non-ferrous metal products group index reflected price increases for copper and its products. The wood products group index moved 1.4 % higher to 510.5 from 503.3 on higher prices for wood-pulp, spruce, hardwoods, fir, cedar and hemlock. Advances to a lesser degree were recorded in three major group indexes; iron products to 346.2 from 344.1, chemical products to 254.5 from 253.2 and non-metallic mineral products to 244.1 from 243.7.

The animal products group index declined 0.5 % to 427.4 from 429.4 on sharp price decreases registered for pork and pork products. The textile products group index eased down slightly to 309.1 from 309.6 because of substantial declines in raw wool prices coupled with slight declines in cotton.

The General Wholesale Index, which advanced 16.5 % from April 1972, contains relatively few final product price indexes for commodities such as consumer durable goods, whose prices have changed little during the past year. The I.S.P.I. manufacturing, which advanced 8.9 % during the same period, does include such products.

The following table lists the Total Index and component groupings for specified dates:

	Apr.*	Mar.*	Apr.	Mar.	% Change	
	1973	1973	1972	1972	Apr. - Avr. 1973	Apr./73 - Avr./72
	Avr.*	Mars*	Avr.	Mars		
General wholesale index - Indice général de gros .....	353.6	350.9 <sup>r</sup>	303.4	304.0	+ 0.8	+ 16.5
Vegetable products - Produits d'origine végétale .....	299.9	294.7 <sup>r</sup>	238.6	241.7	+ 1.8	+ 25.7

Fully and chiefly manufactured goods - Produits finis ou presque finis .....	368.1	364.5 <sup>r</sup>	326.6	325.2	+ 1.0	+ 12.7

These indexes are preliminary.

# Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros a progressé de 0.8 %, au cours du mois dernier passant de 350.9 en mars (indice rectifié) à 353.6 en avril, ce qui représente un accroissement de 16.5 % par rapport à l'indice d'avril 1972 (303.4). Six des huit indices des groupes principaux ont augmenté et deux ont baissé.

L'indice des produits d'origine végétale a augmenté de 1.8 % en avril, passant de 249.7 à 299.9, en raison d'une hausse du prix des fruits secs, des huiles végétales et des produits, du sucre et de ses dérivés, du thé, du café et du cacao. L'accroissement de 1.5 % de l'indice du groupe des produits métalliques non ferreux, qui est passé de 301.2 à 305.7, est attribuable à une augmentation du prix du cuivre et de ses produits. L'indice du groupe des produits du bois a progressé de 1.4 %, passant de 503.3 à 510.5, par suite d'une hausse du prix de la pâte de bois, de l'épinette, des feuillus, du sapin, du thuya (cèdre) et de la pruche. L'augmentation a été moins marquée dans le cas de trois grands groupes: produits du fer (de 344.1 à 346.2); produits chimiques (de 253.2 à 254.5); et produits minéraux non métalliques (de 243.7 à 244.1).

L'indice du groupe des produits d'origine animale, s'est replié de 0.5 % en passant de 429.4 à 427.4, par suite d'une forte baisse du prix du porc et de ses produits. L'indice du groupe des produits textiles a baissé légèrement (de 309.6 à 309.1), résultat d'une baisse appréciable du prix de la laine brute et d'une légère diminution du prix du coton.

L'indice général des prix de gros qui a augmenté de 16.5 % depuis avril 1972, renferme relativement peu d'indices de prix de produits finals tels que les biens durables de consommation, dont les prix n'ont guère varié l'année dernière. L'indice des prix de vente dans l'industrie (toutes industries manufacturières) a augmenté de 8.9 % au cours de la même période et comprend de tels produits.

Le tableau ci-dessous présente les variations les plus importantes.

The investors index of common stock prices decreased by 0.2 % to 189.1 in April, the fourth monthly decrease since the record high of 194.5 in January. Of the three major groups, industrials lowered 0.4 % to 199.9, utilities fell 0.8 % to 155.2 and finance increased 1.5 % to 185.8. Amongst the thirteen industrial sub-groups, the largest decreases were 4.1 % in metal fabricating (207.7) and 3.3 % in industrial mines (134.2); a rise of 3.4 % was recorded in primary metals (119.5). In utilities, gas distribution as well as pipelines decreased 3.3 % and 2.3 % to 168.0 and 167.1 respectively. The rise in the finance index is due to a gain in banks of some 2.3 % to 215.5, while investment and loan fell 0.8 % to 140.7.

In the same period, the index of mining stock prices rose 4.7 % to 132.3; golds moved up 14.1 % to 161.4 (the record remains at 166.0 for February 1969), and base metals slowed down 1.4 % to 117.6.

Of the two supplementary price indexes, uranium increased 1.2 % to 228.1, while petroleum and primary oil and gas fell 4.5 % to 467.6.

The preferred stock index decreased 1.1 %, from 75.3 in March to 74.5 in April.

#### Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets declined 1.1 % to 346.3 in April from the revised March index of 350.2. A decrease of 1.5 % to 465.1 from 472.4 in the animal products index reflected lower prices for hogs and lambs on both Eastern and Western markets, for steers in the East and for raw wool and fluid milk in the West. Higher prices were shown for calves and butterfat on both markets, for fluid milk in the East and cheesemilk and eggs in the West.

The field products index moved 0.2 % lower to 227.6 from 228.0 on price decreases for potatoes in the East and for flax in the West. Higher prices were shown for rye and hay on both markets, for barley in the East and potatoes in the West.

#### Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, declined 0.6 % to 351.5 in April from the revised March index of 353.7. Prices were lower for eight commodities, higher for eight and unchanged for fourteen. Principal changes included decreases for raw wool, beef hides, hogs, steel scrap, raw rubber, oats and steers while increases were recorded for linseed oil, bleached sulphite pulp, spruce lumber, raw sugar, steel bars and iron ore.

L'indice des cours de placement des actions ordinaires a baissé de 0.2 % en avril pour s'établir à 189.1: c'est la quatrième diminution mensuelle depuis janvier, mois où l'indice avait atteint un record de 194.5. Parmi les trois grands groupes, les valeurs industrielles ont fléchi de 0.4 % pour se fixer à 199.9, les services publics ont baissé de 0.8 % pour s'établir à 155.2 et les finances ont augmenté de 1.5 % pour atteindre 185.8. Parmi les treize sous-groupes industriels, les plus importantes diminutions ont été de 4.1 % dans la fabrication des métaux (207.7) et de 3.3 % dans les mines industrielles (134.2); une hausse de 3.4 % est à signaler dans les métaux primaires (119.5). Dans le cas des services d'utilité publique, la distribution du gaz ainsi que les pipe-lines ont baissé de 3.3 % et 2.3 % pour s'inscrire respectivement à 168.0 et 167.1. L'augmentation de l'indice des finances est attribuable à un gain des banques de l'ordre de 2.3 % pour s'établir à 215.5 tandis que les placements et les prêts diminuaient de 0.8 % pour se fixer à 140.7.

Au cours de la même période, l'indice du cours des titres miniers a progressé de 4.7 % pour atteindre 132.3; l'or a augmenté de 14.1 % pour atteindre 161.4 (le record demeure 166.0 établi en février 1969), et les métaux communs ont diminué de 1.4 % pour se fixer à 117.6.

Pour ce qui est des deux indices supplémentaires, l'uranium a augmenté de 1.2 % pour s'établir à 228.1 alors que le pétrole et les gaz primaires diminuaient de 4.5 % pour se fixer à 467.6.

L'indice des actions privilégiées a baissé de 1.1 %, tombant de 75.3 en mars à 74.5 en avril.

#### Indices des prix des produits agricoles canadiens (1935-39=100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux s'est replié de 1.1 %, passant de 350.2 en mars à 346.3 en avril. La baisse de 1.5 % de l'indice des produits d'origine animale, qui passe de 472.4 à 465.1, est imputable à une diminution du prix des porcs et des agneaux sur les marchés de l'Est et de l'Ouest, du prix des bouvillons dans l'Est et du prix de la laine brute et du lait de consommation dans l'Ouest. On a signalé une hausse du prix des veaux et de la graisse de beurre sur les deux marchés, une hausse du prix du lait de consommation dans l'Est et du lait de fromagerie et des oeufs dans l'Ouest.

L'indice de prix des grandes cultures a baissé de 0.2 %, passant de 228.0 à 227.6, par suite d'une diminution des prix des pommes de terre dans l'Est et du lin dans l'Ouest. On a noté une hausse du prix du seigle et du foin sur les deux marchés, une hausse du prix de l'orge dans l'Est et des pommes de terre dans l'Ouest.

#### Indice des prix de trente produits industriels (1935-39=100)

L'indice des prix de trente produits industriels, calculé sous forme de moyenne géométrique non pondérée, a baissé de 0.6 %, passant de 353.7 en mars (indice révisé) à 351.5 en avril. Les prix de huit produits ont baissé; ceux de huit autres ont augmenté, et ils sont restés inchangés dans le cas des quatorze autres produits. Les principaux changements comprennent une baisse dans le cas de la laine brute, des peaux de boeuf, des porcs, des déchets d'acier, du caoutchouc brut, de l'avoine et des bouvillons, tandis que l'on a noté une augmentation dans le cas de l'huile de lin, de la pâte blanchie au sulfite, des sciages d'épinette, du sucre brut, de l'acier en barre et du minerai de fer.

The Consumer Price Index for Canada (1961=100) rose 1.1 % to 147.3 in April from 145.7 in March. Food prices, which increased 2.6 %, were again the major contributor to the latest month's advance. The level of prices for All-Items other than Food rose 0.5 % as the Clothing index increased 1.4 % and that for Health and Personal Care moved up 0.9 %. Both the Housing and the Recreation and Reading components rose 0.4 %, while the indexes for Transportation and for Tobacco and Alcohol remained unchanged. Between April 1972 and April 1973, the All-Items Index advanced 6.6 %.

The Food index rose 2.6 % to 156.2 in April from 152.2 in March in contrast with an average increase of 0.8 % between these two months for the preceding five years. In the latest month restaurant meal prices rose 0.4 %, reflecting increases in many cities across the country while the price level of food consumed at home moved up 2.8 %. Higher quotations for meat, milk and fresh produce were important contributors to the latest month's advance in the price of food for home consumption. The index for meat, fish and poultry rose 3.0 % with beef and pork advancing 2.3 % and 2.1 %, respectively, and poultry prices moving up 6.6 %. In the twelve months since April 1972, the price of beef has risen, on average, more than 16 %, pork prices are nearly 30 % higher, and poultry is up over 26 %. Egg prices, which normally rise at this time of year, increased 8.5 % in the latest month to a level 43 % above that of a year previous. Between March and April, when fresh fruit prices usually increase, the fruit index rose 11.3 %. The index for vegetables also moved up, despite lower quotations for tomatoes and celery, because of price rises for other produce items, notably onions. In the latest twelve months, the vegetable and the fruit indexes advanced over 12 % and 13 %, respectively. Between March and April, the price of fresh milk rose 4.4 % as higher retail quotations were registered in the Maritimes as well as in Quebec, Ontario and British Columbia. Amongst other dry products, higher butter prices were registered mainly in cities east of Winnipeg. On the other hand, the bakery and cereal products index fell 0.2 % largely as a result of lower bread prices being featured in some western cities. Price decreases since the preceding month were also recorded for some other items including soft drinks, sugar and chocolate bars, all of which were retailing at price levels slightly below a year earlier. In the twelve months since April 1972, the Food index advanced 12.9 % with the price of food consumed at home rising 13.3 % and that for restaurant meals 10.7 %.

The Housing index rose 0.4 % to 150.1 in April from 149.5 in March as a result of increases of 0.5 % and 0.2 % in the shelter and in the household operation components, respectively. Within shelter, the homeownership element moved up 0.7 % mainly because of increases in the indexes for new houses and homeowner pairs; rents edged up 0.1 %. Among household operation items, furniture prices rose, on average, 1.0 % mainly because of higher quotations for living and bedroom suites and for kitchen sets. On the other hand, a 0.1 % decline in the appliances index reflected reduced prices for vacuum cleaners and refrigerators. Among other household operation items, higher prices were recorded for carpets, drapery material, dishes, mops, detergent and toilet paper. Between April 1972 and April 1973, the Housing index advanced 0.4 %.

L'indice des prix à la consommation pour le Canada (1961=100) a progressé de 1.1 % pour atteindre 147.3 en avril, contre 145.7 en mars. L'augmentation de 2.6 % du prix des aliments a été encore une fois le principal facteur de cette progression. Le niveau des prix de tous les éléments autres que l'alimentation a augmenté de 0.5 %, alors que l'indice de l'habillement a progressé de 1.4 %, et celui des soins personnels et de santé, 0.9 %. Les indices de l'habitation et des loisirs et lecture ont tous deux augmenté de 0.4 %, pendant que ceux des transports et des tabacs et alcools restaient inchangés. Entre avril 1972 et avril 1973, l'indice de tous les éléments s'est accru de 6.6 %.

L'indice de l'alimentation a augmenté de 2.6 %, passant de 152.2 en mars à 156.2 en avril. Cette augmentation tranche sur l'augmentation moyenne de 0.8 % entre ces deux mois au cours des cinq années précédentes. Le mois dernier, le prix des repas pris au restaurant a monté de 1.4 %, à la suite d'augmentations dans de nombreuses villes du pays, tandis que les prix des aliments consommés à la maison ont augmenté de 2.8 %. La hausse des prix de la viande, du lait et des produits frais sont les raisons majeures de l'augmentation des prix des aliments consommés à la maison. L'indice de la viande, du poisson et de la volaille s'est élevé de 3.0 %, pendant que le boeuf et le porc augmentaient de 2.3 % et de 2.1 % respectivement, et la volaille, de 6.6 %. Au cours des douze mois depuis avril 1972, le prix du boeuf a augmenté en moyenne de plus de 16 %, celui du porc, de près de 30 %, et celui de la volaille, de plus de 26 %. Le prix des oeufs, qui augmente normalement à cette époque de l'année, a progressé de 8.5 % le mois dernier pour atteindre un niveau supérieur de 43 % à celui d'un an plus tôt. Entre mars et avril, alors que le prix des fruits frais s'accroît habituellement, l'indice des fruits a augmenté de 11.3 %. L'indice des légumes a lui aussi progressé, en dépit d'une baisse des prix des tomates et du céleri, car les prix d'autres légumes ont augmenté, notamment celui des oignons. Au cours des douze derniers mois, les indices des légumes et des fruits se sont accrus de plus de 22 % et de 13 % respectivement. Entre mars et avril, le prix du lait frais a monté de 4.4 %, car on a observé une hausse des prix de détail dans les Maritimes, de même qu'au Québec, en Ontario, et en Colombie-Britannique. Pour ce qui est des autres produits laitiers, on a observé une hausse du prix du beurre surtout dans les villes à l'est de Winnipeg. Par contre, l'indice des produits céréaliers et de boulangerie a baissé de 0.2 % principalement à la suite d'une diminution du prix du pain dans certaines villes de l'Ouest. On a également noté des diminutions de prix par rapport au mois précédent pour certains autres articles, notamment les boissons gazeuses, le sucre et les tablettes de chocolat, dont tous les prix étaient légèrement inférieurs à ceux d'un an plus tôt. Dans les douze mois qui ont suivi avril 1972, l'indice de l'alimentation a progressé de 12.9 %, le prix des aliments consommés à la maison augmentant de 13.3 %, et celui des repas pris au restaurant, de 10.7 %.

L'indice de l'habitation a augmenté de 0.4 %, passant de 149.5 en mars à 150.1 en avril, par suite de hausses de 0.5 % de l'élément logement et de 0.2 % de l'élément entretien. Dans le cas du logement, l'élément frais de possession d'une maison s'est accru de 0.7 %, à la suite principalement d'une progression des indices des maisons neuves et des réparations de propriétaire; les loyers ont très légèrement augmenté de 0.1 %. Parmi les articles entrant dans l'entretien de l'habitation, les prix des meubles ont progressé en moyenne de 1.0 %, à la suite principalement d'une augmentation des prix des meubles de salon, de chambre à coucher et de cuisine. Par contre, une baisse de 0.1 % de l'indice des appareils ménagers est imputable à une diminution des prix des aspirateurs et des réfrigérateurs. Parmi les autres articles entrant dans l'entretien de l'habitation, on a observé une augmentation des prix des tapis, des tissus de rideau, de la vaisselle, des casseroles, des détersifs et du papier hygiénique. Entre avril 1972 et avril 1973, l'indice de l'habitation a progressé de 6.0 %.

The Clothing index advanced 1.4 % to 136.4 in April from 134.5 in March, which compares with an average March to April increase for the preceding five years of 0.6 %. In the latest month, the indexes for women's and men's wear advanced 2.3 % and 1.2 %, respectively, reflecting higher prices for most items surveyed, notably women's coats and dresses and men's coats, business shirts and suits. A 1.0 % rise in footwear prices was mainly attributable to higher quotations for children's shoes though increased prices were also recorded for men's and women's street shoes. Higher prices for knitting yarn and cotton material moved the piece goods index up 0.6 %, while the children's wear component was unchanged as price rises for some items were offset by reductions in others. In the twelve months to April 1973, the Clothing index advanced 4.0 %.

In April 1973 the Transportation index was unchanged from its March 1973 level of 133.9 and stood 0.7 % above its level of April 1972. In the latest month, the automobile operation element remained unchanged as lower quotations for gasoline in a number of Ontario cities and in Winnipeg, as well as some reductions in the price of tires, offset scattered price increases for new cars and generally higher motor oil quotations. Amongst other transportation items, train fares increased and there was a rise in taxi fares in St. John's.

The Health and Personal Care index advanced 0.9 % to 154.1 in April from 152.8 in March mainly because of a 3.0 % increase in dentists' fees which reflected generally higher charges for all services surveyed. Pharmaceutical prices rose 0.1 % as higher quotations for laxatives, vitamins and some prescriptions outweighed reduced prices for cough medicine and antiseptic. The personal care services index rose 0.3 % because of higher charges for women's hairdressing in Edmonton and Calgary, and for men's haircuts in Thunder Bay. A 0.4 % decline in personal care supplies resulted from reduced prices for a number of toiletries, particularly toothpaste and shaving cream; however, sanitary napkins and face powder increased in price. In the twelve months to April 1973, the Health and Personal Care index rose 4.1 %.

The Recreation and Reading index rose 0.4 % to 143.0 in April from 142.5 in March. The reading component moved up 0.5 % as a result of higher newspaper subscription rates in Edmonton, while a 0.2 % rise in the recreation element mainly reflected generally higher bicycle prices and some increased quotations for toys and phonograph records; prices of camera film (including processing) were lower. Between April 1972 and April 1973, the Recreation and Reading index rose 3.4 %.

In April 1973, the Tobacco and Alcohol index was unchanged from its March 1973 level of 135.8 and stood 2.8 % above its level of April 1972.

Consumer price movements, when classified by commodities and services, offer another view of the incidence of price change. Between March and April the services index rose 0.4 % as a result of higher prices for dental care, shelter services, men's haircuts and women's hairdressing together with increased train and taxi fares. On the other hand, the total commodities index advanced 1.5 % mainly because of the 2.6 % increase in food prices. The component for non-durable commodities other than food moved up 0.6 % as higher prices for clothing, household cleaning supplies, motor oil, toys and records outweighed reductions for toiletries, gasoline and camera film. A 0.4 % rise in durables' prices resulted from higher quotations for furniture, carpets, bicycles and

L'indice de l'habillement a augmenté de 1.4 %, passant de 134.5 en mars à 136.4 en avril, ce qui correspond à l'augmentation moyenne entre mars et avril au cours des cinq années précédentes (0.6 %). Au cours du mois dernier, les indices des vêtements pour femmes et pour hommes ont progressé de 2.3 % et de 1.2 % respectivement, à la suite d'une hausse des prix de la plupart des articles observés, notamment les manteaux et robes pour femmes, et les manteaux, chemises de ville et costumes pour hommes. L'augmentation de 1.0 % du prix des chaussures est principalement attribuable à une hausse des chaussures pour enfants, bien que l'on ait observé une hausse également dans le cas des chaussures de ville pour hommes et femmes. La hausse des prix des filés tricots et des tissus en coton a entraîné une augmentation de 0.6 % de l'indice des tissus à la verge, tandis que l'élément vêtements pour enfants restait inchangé, car des augmentations de certains articles étaient compensées par des baisses dans d'autres. Au cours des douze mois depuis avril 1972, l'indice de l'habillement a progressé de 4.0 %.

L'indice des transports est resté inchangé en avril 1973 par rapport à mars, soit 133.9. Il était supérieur de 0.7 % à celui d'avril 1972. Au cours du mois dernier, les frais d'automobiles sont restés inchangés car une baisse du prix de l'essence dans un certain nombre de villes de l'Ontario et à Winnipeg, ainsi que quelques diminutions du prix des pneus ont compensé certaines augmentations éparpillées des voitures neuves, et une hausse assez générale de l'huile à moteur. Pour ce qui est des autres éléments, les tarifs ferroviaires ont augmenté, ainsi que les tarifs des taxis de Saint-Jean (T.-N.).

L'indice des soins personnels et de santé a progressé de 0.9 %, passant de 152.8 en mars à 154.1 en avril, par suite surtout d'un accroissement de 3.0 % des honoraires des dentistes qui reflétaient une hausse générale des prix pour tous les services observés. Les prix des produits pharmaceutiques ont augmenté de 0.1 %, car la hausse des laxatifs, des vitamines et de certains médicaments a été plus forte que la baisse des médicaments contre la toux et des antiseptiques. L'indice des services de soins personnels a progressé de 0.3 % à la suite d'une augmentation des prix chez les coiffeurs pour dames à Edmonton et Calgary, et du prix de la coupe de cheveux pour hommes à Thunder Bay. Une baisse de 0.4 % des articles de soins personnels est imputable à une diminution des prix d'un certain nombre de produits de toilette, particulièrement la pâte dentifrice et la crème à raser; par contre les serviettes hygiéniques et la poudre ont augmenté. Au cours des douze mois allant jusqu'à avril 1973, l'indice des soins personnels et de santé a augmenté de 4.1 %.

L'indice des loisirs et de la lecture a progressé de 0.4 %, passant de 142.5 en mars à 143.0 en avril. L'élément lecture a augmenté de 0.5 % par suite d'une augmentation des tarifs d'abonnement de journaux à Edmonton, alors qu'une hausse de 0.2 % de l'élément loisirs est imputable à des prix généralement plus élevés des bicyclettes et à certaines hausses des jouets et des disques. Les prix des films (y compris le développement) ont diminué. Entre avril 1972 et avril 1973, l'indice des loisirs et de la lecture a augmenté de 3.4 %.

En avril 1973, l'indice des tabacs et alcools est resté inchangé par rapport à mars 1973, soit 135.8. Il était de 2.8 % au-dessus de son niveau d'avril 1972.

Classées par biens et services, les différentes composantes de l'indice des prix à la consommation, présentent un autre aspect de la variation des prix. Entre mars et avril l'indice des services a augmenté de 0.4 % à la suite d'une hausse des prix des soins dentaires, des services de logement des coupes de cheveux pour hommes et des soins de coiffures pour femmes, ainsi que des tarifs des chemins de fer et des taxis. Par contre, l'indice total des biens a avancé de 1.5 % à la suite surtout de l'accroissement de 2.6 % des prix des aliments. L'élément biens non durables (sauf les aliments) a augmenté de 0.6 %, car l'accroissement des prix des vêtements des produits de nettoyage ménagers, de l'huile à moteur, et des jouets et disques a été plus forte que la baisse observée dans les prix des articles de toilette, de l'essence et des films. Une augmentation de 0.4 % du prix des biens durables

new cars outweighing reductions for automobile tires and for appliances. Between April 1972 and April 1973, the index for commodities advanced 7.0 % while that for services rose 5.9 %.

est imputable à la hausse des prix des meubles, des tapis, des bicyclettes et des voitures neuves, laquelle a pesé plus lourd que la baisse observée dans les prix des pneus d'automobiles et des appareils ménagers. Entre avril 1972 et avril 1973, l'indice des marchandises a progressé de 7.0 %, et celui des services, de 5.9 %.

TABLE 1. Summary of Current Price Indexes  
TABLEAU 1. Récapitulation des indices des prix courants

	Indexes				Percentage changes		
	Indices				Variation proportionnelle		
	Apr. 1973	Mar. 1973	Apr. 1972	Mar. 1972	Apr. 1973	Apr. 1972	Apr. 1973

Light fuel oils (No's 2 and 3) - Mazouts légers (nos 2 et 3).

18 3651 007

Heavy fuel oils (No's 4-5-6) - Mazouts lourds (nos 4, 5, 6).

18 3651 008

Asphalt - Asphalte

18 3651 010

Manufacturers of lubricating oils and greases - Manufacturiers d'huiles et graisses lubrifiantes.

18 3652

CHEMICAL AND CHEMICAL PRODUCTS INDUSTRIES - INDUSTRIE CHIMIQUE ET DES PRODUITS CONNEXES.

19

Manufacturers of mixed fertilizers - Fabricants d'engrais mélangés.

19 3720

Mixed fertilizer 6-12-12 - Engrais mélangés 6-12-12.

19 3720 010

Mixed fertilizer 10-10-10 - Engrais mélangés 10-10-10

19 3720 013

Manufacturers of plastics and synthetic resins - Fabricants de matières plastiques et de résines synthétiques.

19 3730

Synthetic resins, phenol-formaldehyde type - Résines synthétiques, genre phénol-formaldéhyde.

19 3730 007

Synthetic resins, (compound) polyethylene type - Résines synthétiques, (composé) genre polyéthylène.

19 3730 009

Synthetic resins, vinyl chloride type - Résines synthétiques, genre chlorure de vinyle.

19 3730 017

Manufacturers of pharmaceuticals and medicines - Fabricants de produits médicaux et pharmaceutiques.

19 3740

Medicines and pharmaceuticals registered as patent medicines - Médicaments et produits pharmaceutiques, enregistrés comme spécialités pharmaceutiques.

19 3740 001

Antibiotics and preparations, penicillin preparations - Antibiotiques et préparations, préparations à base de pénicilline.

19 3740 003

See footnote(s) at end of table. - Voir renvoi(s) à la fin du tableau.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES  
TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)	Month - Mois												Annual Annuel
	J	F	M	A	M	J	J	A	S	O	N	D	
(5) Industry selling price index: manufacturing - Indice des prix de vente dans l'industrie: industries manufacturières.	1969 114.5	115.0	115.6	115.9	116.3	116.7	116.4	116.6	116.8	117.2	117.2	118.1	116.3
	1970 119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.9	118.8	119.1
	1971 119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
	1972 124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
	1973 133.0	134.4	136.5	137.7									

- (1) Indexes for 1972 and 1973 are subject to revision. - Les indices pour 1972 et 1973 sont sujets à révision.  
 (2) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - À compter  
 (3) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels:

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre .....	95.1	92.3
January - 1971 - Janvier .....	95.1	92.1
Average - 1971 - Moyenne .....	95.2	91.8

- (4) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.  
 (5) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

fantaisie(8) .....	99.8	100.2	100.0	100.4	100.0	99.3	99.7
	116.2	117.1	105.3	106.5	107.7	100.4	100.3
<b>Beverages - Breuvages</b>							
Tea bags - Thé, sachets, orange pekoe .....	102.1	101.8	103.2	103.2	103.4	100.3	101.9
Coffee, roasted - Café, grillé .....	135.1	134.7	126.5	126.7	129.6	132.2	132.4
Coffee, instant, dried - Café instantané,							
seché .....	117.7	117.9	112.7	112.7	114.2	112.3	112.9
<b>Miscellaneous Groceries - Denrées diverses</b>							
Tomato catsup - Ketchup aux tomates .....	129.4	129.9	122.5	124.0	124.3	115.9	112.6
Peanut butter, plain - Beurre d'arachides,							
ordinaire .....	140.1	137.1	132.6	133.1	132.3	136.9	139.8
Pickles, sweet, mixed - Cornichons sucrés							
variés .....	135.6	137.8	132.9	131.9	133.1	127.7	125.3
Jelly powders, flavoured - Gelée en poudre							
aromatisée .....	127.9	128.2	125.9	128.3	127.7	121.5	118.0

- (1) Includes cuts with bone-in and boned and rolled. - Y compris les morceaux avec os, sans os et roulés.  
(2) Includes cuts with blade-in and blade removed. - Y compris les morceaux avec ou sans palette.  
(3) 1965=100. - 100 en 1965.  
(4) Indexes based on chain store prices in 7 cities. - Les indices sont fondés sur les prix dans les magasins à succursales multiples de 7 villes.  
(5) Indexes based on prices in 16 cities. - Les indices sont fondés sur les prix dans 16 villes.  
(6) 1963=100. - 100 en 1963.  
(7) Indexes based on prices for pectin and pure jam combined. - Les indices sont basés sur les prix de la confiture avec pectine et de la confiture pure.  
(8) June 1968=100. - 100 en juin 1968.

TABLE 11. Consumer Price Indexes, Regional Cities, 1962-73(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines, 1962-73(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

May - Mai .....										
June - Juin .....										

(1) For explanation see page 91. - Pour de plus amples explications, voir la page 91.

(2) The shelter element of regional cities housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and homeownership costs. See also page 91. - Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir la page 91.

(3) Includes shelter and household operation. The shelter element of regional city housing indexes moves on the basis of changes in rents only, whereas in the Canada index this movement is derived from changes in both rents and home-ownership costs. See also page 91. - Comprend le logement et l'entretien du ménage. Au niveau des agglomérations urbaines, l'élément logement de l'indice de l'habitation varie selon les changements dans les prix des loyers; par contre, au niveau du Canada, l'élément logement tient compte à la fois des changements dans les prix des loyers et dans les frais de possession d'une maison. Voir aussi la page 91.

(1) Indexes for current year are subject to revision. -- Les données de l'année courante sont sujettes à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. -- L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

- (1,2) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
- (2) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contract profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction; elle n'a donc pas tout à fait la même portée que l'indice synthétique des prix de la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.
- (3) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (4) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (5) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

	1973	112.7	112.9	114.3										
Aggregate equipment, composite index - Matériel de traitement des agrégats synthétique.	1969													
	1970													
	1971	107.1	106.9	107.2	107.3	109.2	110.2	110.6	110.1	110.1	109.6	109.6	109.4	108.9
	1972	111.7	111.6	111.6	112.2	111.8	111.2	111.8	111.6	111.7	111.6	113.0	113.6	112.0
	1973	114.9	115.0	115.8										
Attachments, imported - Pièces auxiliaires, importés	1969	103.8	104.0	104.2	104.1	104.2	104.4	104.6	104.3	104.7	107.2	107.2	109.5	105.2
	1970	109.4	109.4	109.4	109.4	109.4	105.9	105.2	104.5	104.0	107.7	109.3	109.0	107.7
	1971	108.3	109.0	108.7	110.0	110.3	112.0	112.0	111.1	111.1	110.1	110.1	110.4	110.3
	1972	111.8	112.4	111.6	111.2	110.6	109.7	110.4	110.3	110.4	110.3	110.8	111.9	111.0
	1973	112.1	112.0	112.4										
Other wheeled tractors, imported - Autres tracteurs sur pneus, importés.	1969	102.1	102.2	102.5	102.4	102.5	102.7	102.9	102.6	102.6	103.5	103.9	103.7	102.8
	1970	103.6	103.6	103.6	102.5	102.5	99.2	98.5	97.4	97.0	98.7	98.5	101.0	100.5
	1971	100.4	100.7	100.5	101.0	101.3	102.5	102.5	101.6	101.6	100.8	100.8	101.1	101.2
	1972	101.8	101.6	101.0	100.7	101.2	100.3	100.8	100.6	100.7	100.6	101.1	102.1	101.0
	1973	102.3	102.1	103.5										
Contractors' tools, Canadian made - Outillage de chantier fabriqué au Canada.	1969													
	1970													
	1971													
	1972	107.5	107.5	107.5	106.6 <sup>r</sup>	106.6 <sup>r</sup>	106.6 <sup>r</sup>	106.6 <sup>r</sup>	106.6	106.6	106.6	106.6	106.6	106.8
	1973	106.6	106.6	106.6										
Contractors' tools, imported - Outillage de chantier fabriqué, importées.	1969													
	1970													
	1971													
	1972													
	1973													
Contractors' tools, composite index - Outillage de chantier fabriqué, indice synthétique.	1969													
	1970													
	1971													
	1972													
	1973													
Road rollers and vibratory compactors, self-propelled, hand guided or towed, Canadian made - Rouleaux compresseurs et compacteurs vibrants, automoteurs pour routes, tractés ou conduits à la main, fabriqués au Canada.	1969													
	1970													
	1971													
	1972	110.3	112.8	112.4	112.1	111.8	110.8	111.4	111.9	112.0	112.0	112.5	114.2	112.0
	1973	115.2	114.7	115.8

Indexes for 1972 and 1973 are subject to revision. — Les indices pour 1972 et 1973 sont sujets à révision.

Not included in the Forestry machinery and equipment, East of the Rockies, composite index — Non inclus dans l'indice synthétique de la machinerie et matériel forestiers à l'est des Rocheuses.

Explanation of Methods Used and Additional  
Sources for Price Series

Industrial Price Indexes

Industry Selling Price Indexes (1961=100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15<sup>th</sup> of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

Purchase Price Indexes of Secondary Metals  
(1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Canadian Farm Products Price Index (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1, 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14 % at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised as further payments are announced.

Final payments for the crop year August 1971 - July 1972 were announced on February 13, 1973 for wheat and oats. No final payment was granted for barley.

Explication des méthodes utilisées et sources  
supplémentaires des séries de prix

Indices des prix industriels

Indices des prix de vente dans l'industrie (1961=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix des livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

Indices du prix d'achat des métaux de deuxième fusion  
(1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. A compter du 1<sup>er</sup> août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14 %) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Les prix définitifs pour la campagne allant d'août 1971 à juillet 1972 ont été annoncés le 13 février 1973, en ce qui concerne le blé et l'avoine. Il n'y a pas eu de dernier paiement pour l'orge.

#### General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which includes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things

#### Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'au niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, cet indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En

are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

Thirty Industrial Materials,  
1935-39 = 100

The price index of thirty industrial materials is calculated as an unweighted geometric average prices of the selected commodities. The formula is as follows:

$$\frac{30}{\sqrt{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}$$

---

$$\frac{30}{\sqrt{P_{t\ 35-39}^1 \times P_{t\ 35-39}^2 \times P_{t\ 35-39}^3 \times \dots \times P_{t\ 35-39}^{30}}}$$

The selection of materials for pricing related to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyres type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

tant que chiffre représentatif classique, on a eu tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros, consulter Wholesale Price Indexes 1913-50 (Reference Paper No. 24) et Prices and Price Indexes 1949-52 (Vol. 23) (n° 62-501 au catalogue).

Indice des prix de trente matières industrielles  
(1939-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\frac{30}{\sqrt{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}}$$

---

$$\frac{30}{\sqrt{P_{t\ 35-39}^1 \times P_{t\ 35-39}^2 \times P_{t\ 35-39}^3 \times \dots \times P_{t\ 35-39}^{30}}}$$

Le choix des matières servant au prélèvement des prix se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

## Retail Price Indexes

## Indices des prix de détail

### Consumer Price Index for Canada (1961=100)

### Indice des prix à la consommation au Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services of items for which there is a continually measurable market price over time, corresponding to a specific quantity of the item.

L'indice des prix à la consommation sert à mesurer le taux de variation du prix qu'il en coûte pour acheter un "panier" de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" demeure le même; il équivaut tout au moins à une quantité égale de biens et services de qualité égale; de plus, il est constitué de produits pour lesquels on peut toujours trouver sur le marché un prix mesurable et correspondant à une quantité déterminée de ce produit.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index is unlikely to represent closely the experience of any one family within the group nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families - (a) living in cities with over 30,000 population, (b) ranging in size from two adults to two adults with four children, and (c) with annual incomes during 1957 ranging from \$2,500 to \$7,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

L'indice porte sur un groupe étendu mais bien déterminé de familles urbaines et rend compte des variations des prix auxquelles l'échantillon en question a dû faire face. Il est fort peu probable que l'indice représente fidèlement l'expérience d'une famille en particulier; de même, il ne faut pas s'attendre à ce qu'il rende compte des variations des prix auxquelles ont fait face des groupes sensiblement différents par le revenu, la taille de la famille et le lieu de résidence. L'échantillon sur lequel porte l'indice est composé de familles - a) vivant dans des villes de plus de 30,000 habitants, b) dont la taille oscille entre deux adultes et deux adultes avec quatre enfants et c) dont le revenu annuel en 1957 oscillait entre \$2,500 et \$7,000. Pour évaluer l'influence des variations de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation porte sur les variations d'environ 300 articles.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In 1952, the time base was updated to 1949=100 from 1935-39=100 and, at the same time, weights were revised to reflect family expenditure patterns in 1947-48. A subsequent revision of weights based on 1957 expenditures was introduced at the beginning of 1961 and the time base was revised from 1949=100 to 1961=100 at the beginning of 1969.

L'indice des prix à la consommation au Canada remonte au début du siècle; depuis lors, on a révisé périodiquement la période de référence et les schémas de pondération. Ainsi, en 1952, la période de référence est passée de 1935-1939=100 à 1949=100; à la même occasion, les poids ont été revus de façon à présenter un reflet de la structure des dépenses des familles en 1947-48. La révision suivante des facteurs de pondération était fondée sur les dépenses des consommateurs en 1957 et fut introduite au début de 1961. Enfin, c'est au début de 1969 qu'on porta la période de 1949=100 à 1961=100.

Full details on the latest weighting patterns and time base revisions are available in the occasional paper "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures", Statistics Canada Catalogue No. 62-518 and in the January 1969 issue of the monthly bulletin, Prices and Price Indexes, Catalogue No. 62-002.

Le lecteur trouvera de plus amples renseignements sur les dernières révisions du schéma de pondération et de la période de référence dans la publication occasionnelle "The Consumer Price Index for Canada (1949=100) - Revision based on 1957 Expenditures" (n° 62-518) et dans la livraison de janvier 1969 du bulletin mensuel "Prices and Price Indexes" (n° 62-002).

### Consumer Price Indexes for Regional Cities (1961=100)

### Indices des prix à la consommation dans certaines agglomérations urbaines (1961=100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). The regional indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada except for their individual weighting systems.

Ces indices sont publiés mensuellement dans le présent bulletin (voir Tableau 11). Par leur conception et par les éléments qui les composent, ces indices sont en général similaires à l'indice des prix à la consommation au Canada, seuls leurs coefficients de pondération diffèrent.

Also, city indexes are not as comprehensive in price content as the Canada consumer price index and may underestimate slightly the degree of price movements occurring. In this connection, the shelter component of the city indexes moves on the basis of changes in rents only, whereas changes in both rents and homeownership costs are included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and all-items indexes for cities have tended to underestimate the rates of price increase, particularly over longer periods. Studies are under way to incorporate homeownership prices in city indexes.

Aussi, les indices de prix dans les villes ne représentent pas les prix de façon aussi complète que l'indice des prix à la consommation au Canada et ils peuvent sous-estimer légèrement l'importance des mouvements de prix. C'est ainsi que l'élément "logement" des indices des villes varie en fonction des changements dans les loyers uniquement, alors que l'indice pour l'ensemble du Canada comprend les loyers et les coûts de propriété. A la suite d'une augmentation des coûts de propriété plus rapide que celle des loyers, les indices de l'habitation et de tous les éléments pour les villes ont tendu à sous-estimer quelque peu les taux de croissance des prix, surtout sur de plus longues périodes de temps. On étudie actuellement l'incorporation des prix de propriété dans les indices des villes.

Each index is designed to measure the influence of changes in retail prices taking place in the localities specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in those particular areas.

Chaque indice est conçu de façon à mesurer les conséquences des variations des prix de détail survenant dans les agglomérations en question sur le prix d'un panier constant de biens et de services représentant la consommation d'un groupe représentatif de familles appartenant à ces secteurs.

In using the city indexes, it should be remembered that they are not indicators of comparative levels of prices as between the cities. That is, they do not in any way indicate whether prices are higher or lower in one city than in another.

For comparisons of retail price differentials between cities see Table 14 of this publication and the relevant explanatory note.

Historical Consumer Price Indexes (1969=100) for "Thunder Bay" and "Quebec City" are available, with explanatory notes on request from Retail Prices Section, Prices Division, Statistics Canada.

#### Measuring the Purchasing Power of Earnings

Changing consumer price levels affect the amounts of goods and services which a dollar will buy, and average earnings, of course, will be affected in the same way. An earnings measurement which takes the change of consumer prices into account, can be calculated by reducing actual earnings averages by the percentage amounts consumer price levels rise. or increasing them by the amount price levels fall. The adjusted averages may be used to indicate the comparative quantities of goods and services which could be purchased by average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100 in week B, and that in the same interval a consumer price index advances from 100.0 to 110.0. Because of the 10 % rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. Likewise, a 25 % rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price increase. The adjusted average is \$90.91 ( $100.0/110.0 \times \$100.$ ), which may be referred to as a weekly wage average for week B expressed in the dollars of period A, or it may be said to indicate the level of real weekly wages relative to week A.

The foregoing calculation can be carried a step further to express in index number form the relationship between the week A average of \$80.00 and the week B figure of \$90.91. Taking the week A average of \$80.00 as equal to 100.0, the week B index becomes 113.6 ( $90.91/80.00 \times 100.0$ ). Such an index may be called an index of weekly real wages. It indicates that average wages for week B will buy 13.6 % more goods and services than those received in week A, in spite of a 10 % rise in consumer prices. This 13.6 % increase in real wages compares with the rise of 25 % in money wages ( $100.00/80.00 \times 100.0$ ).

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular income group. Group-spending patterns change over periods of time. To the extent that this occurs, the earnings data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered

Le lecteur devra toujours garder en mémoire que ces indices ne sont pas des indicateurs qui permettent de comparer le niveau des prix d'une ville à l'autre et qu'ils n'indiquent en aucune façon si les prix sont plus ou moins élevés dans une ville que dans une autre.

Pour étudier les différences de prix au détail entre les villes, il faut consulter le Tableau 14 de ce bulletin et les notes explicatives qui l'accompagnent.

Les indices chronologiques des prix à la consommation (1969=100) pour Québec et Thunder Bay et les notes explicatives qui les accompagnent peuvent être obtenus de la Section des prix de détail de la Division des prix de Statistique Canada.

#### Calcul du pouvoir d'achat

Toute variation des prix à la consommation influence directement sur la quantité de biens et de services qu'on peut acheter avec un dollar et par conséquent sur le revenu moyen. Pour mesurer le revenu en tenant compte de la variation des prix à la consommation, on peut déduire du revenu moyen réel le montant proportionnel qui correspond à l'augmentation des prix à la consommation ou ajouter au revenu réel le montant qui équivaut à la diminution des prix à la consommation. Ces moyennes corrigées peuvent ensuite servir à déterminer la quantité de biens et de services qu'on aurait pu acheter grâce à un revenu moyen, les prix à la consommation et les habitudes de consommation n'ayant pas changé. On trouvera ci-dessous des exemples de cette méthode.

Supposons qu'une série de salaires hebdomadaires moyenne passe de \$80 pendant la semaine A à \$100 au cours de la semaine B et que dans la même période de temps l'indice des prix à la consommation progresse de 100.0 à 110.0. En raison de l'augmentation de 10 % des prix à la consommation, on n'obtiendrait pas autant avec \$1 au cours de la semaine B que pendant la semaine A. De même il serait exagéré de dire que, pour une augmentation de la rémunération de \$80 à \$100 le pouvoir d'achat du salaire hebdomadaire moyen s'est élevé de 25 %. On peut mener cette augmentation à des proportions plus justes en réduisant du nouveau salaire hebdomadaire moyen l'augmentation des prix à la consommation. La rémunération moyenne corrigée s'établira donc à \$90.91 ( $100.0/110.0 \times \$100.$ ), dont on peut dire qu'elle exprime la rémunération hebdomadaire moyenne de la semaine B en dollars de la semaine A, ou encore qu'elle rend compte du niveau effectif de la rémunération hebdomadaire de la semaine B par rapport à la semaine A.

On peut pousser plus loin les calculs et exprimer à l'aide d'un indice la relation entre le salaire moyen de la semaine A (\$80) et celui de la semaine B (\$90.91). Ainsi, si l'on considère que la rémunération moyenne de \$80 de la semaine A était égale à 100.0, l'indice de la semaine B deviendra 113.6 ( $90.91/80.00 \times 100.0$ ). On pourrait appeler cet indice l'indice de la rémunération hebdomadaire effective; il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6 % de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10 % des prix à la consommation. L'augmentation de 25 % des salaires se ramène donc à une augmentation effective de 13.6 % ( $100.0/80.00 \times 100.0$ ).

Il convient de souligner que, même si les estimations de la rémunération moyenne effective résument assez bien la situation d'un large éventail de travailleurs, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur le revenu porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur le revenu, ajustées par l'indice des prix à la consommation (les habitudes de consommation étant "fixes") perdront graduellement de leur

less valid. Finally, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of "take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual and real wages uses 1961 as a reference year. However, the adjustment made in the foregoing illustration can be applied to any reference level; percentage change between any two periods will be the same regardless of the reference period selected.

#### Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned.) While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price indexes. In developing these spatial price comparisons efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices (qualling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were

valeur. Enfin, il ne faut pas oublier qu'une partie du revenu peut être consacrée à l'épargne et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations du revenu effectif calculées à partir de moyennes du revenu brut peut différer de l'évaluation des variations du pouvoir d'achat du revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés et de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente la rémunération tant réelle qu'effective prend pour base l'année 1961. Toutefois, les ajustements illustrés dans les exemples ci-dessus peuvent s'appliquer à tout niveau de référence; la variation proportionnelle entre deux périodes sera en effet identique quelle que soit la période de référence choisie.

#### Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix aux quels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prices and Price Indexes* (n° 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves, pour lesquelles les dif-

derived directly from new comparisons based on May 1971 price data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

It should be noted that the retail prices used in this comparisons, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

#### Farm Input Price Indexes (1961=100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961=100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39=100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, Farm Input Price Indexes, 1961=100, Catalogue No. 62-534, and is reproduced in the September 1971 issue of Prices and Price Indexes, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, Farm Input Price Indexes, 1961=100, Catalogue No. 62-004, and in the monthly publication Prices and Price Indexes, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterpart, and publication has been suspended.

différences de prix entre villes ont été tirées directement de nouvelles comparaisons fondées sur les données de mai 1971. La mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension de mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas sur les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont on a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales catégories du budget.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux qui doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe quelle des villes qui y figurent.

#### Indices de prix des entrées dans l'agriculture (1961=100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont sur l'enquête de 1958 sur les revenus et les dépenses des cultivateurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961=100.

Les indices des prix des entrées dans l'agriculture placent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39=100). Cet indice comprenait l'indice du coût de la vie pour les familles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

Le bulletin hors série Farm Input Price Indexes, 1961=100 (n° 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données et est reprise dans Prices and Price Indexes de septembre 1971 (n° 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel Farm Input Price Indexes, 1961=100 (n° 62-004) et dans le bulletin annuel Prices and Price Indexes (n° 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent jour et on a cessé de le publier.

## Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the Globe and Mail and the Montreal Gazette. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of prices in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new sub-groups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Gas (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Securities Index and Preferred Index, see Prices and Price Indexes for February 1973.

## Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of Prices and Price Indexes, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflator (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

National Income and Expenditure Division,  
Statistics Canada.

## Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placeur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture de la Bourse du jeudi indiqués dans le Globe and Mail et dans la Montreal Gazette. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base de 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâtes et papiers, et huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipe-lines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans Prix et indices des prix de février 1973

## Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans Prices and Price Indexes de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

(1) Division du revenu national et de la défense nationale,  
Statistique Canada.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system(2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961=100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

#### Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of Prices and Price Indexes (62-002). This index is found in Table 20 of Prices and Price Indexes (62-002). Full trade detail, by city, is published quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the Construction Collective Agreement Survey Service provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

#### Highway Construction Price Indexes (1961=100)(3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956=100 time base. Users are warned that an

(2) Industry Selling Price Indexes 1956-1968  
Cat. 62-528.

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. (Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961=100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

#### Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication Prix et indices des prix (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication Prix et indices des prix (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service Statistique des prix dans la construction (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication Construction Collective Agreement Survey Service de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

#### Indices des prix de la construction routière (1961=100)(3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961=100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956=100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices

(2) Indices des prix de vente dans l'industrie, 1956-1968,  
no 62-528 au catalogue.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période du 1<sup>er</sup> avril 1968 au 31 mars 1969.

aggregation of the converted major group indexes with the published weights will not yield the published 1961=100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to his own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the eight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of Prices and Price Indexes, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and in historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of continuous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of materials of supply are prices paid by government departments to suppliers.

#### Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961=100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de Prices and Price Indexes (n° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé Price Indexes of Highway Construction in Canada (n° 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix des matériaux fournis sont les prix payés par les ministères aux fournisseurs.

#### Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - line-men and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se reporter aux Sections III et XI de la publication Price Indexes of Electrical Utility Construction (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes en grande quantité des fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on inclut dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on a fait entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation de réseaux de distribution, lignes de transport d'énergie, de postes de transformation de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses en main-d'œuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

#### Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which was described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation, permanent houses, etc.

#### Price Indexes of Machinery & Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968=100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

#### Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice des centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction; intérêts pendant la construction, frais généraux, fourniture et entretien de baraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

#### Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968=100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente des fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre, à mesure qu'ils seront disponibles. En

preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix des marchandises, compte tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

# NOTES ON PRICES AND PRICE INDEX NUMBERS

## Industry Selling Price Index: Manufacturing (1961 = 100)

The industry selling price index (Total Manufacturing) rose 0.9% in May to 139.2 from the revised April index of 138.0. It was 9.9% higher than the May 1972 index of 126.7. Of the 101 industry indexes included in the total, 64 were higher, 12 declined and 25 were unchanged.

In terms of the relative contribution to the overall change in the total manufacturing index, the more notable changes were continuing advances registered for the food and beverages group, notably in the feed and the vegetable oil mills. Price advances in these feed and feed related industries accounted for one third of the overall advance in the total manufacturing index. The petroleum and coal group rose reflecting price increase of certain products produced by the petroleum refining industry. Continuing advances occurred in the miscellaneous manufacturing group on higher prices recorded in the jewellery and silverware manufacturing industry. Prices in the saw and planning mills industry registered a decline after advancing steadily from 144.5 in October 1971 to 236.6 in April of 1973.

# NOTES SUR LES PRIX ET INDICES DE PRIX

## Indice des prix de vente dans l'industrie: Industries manufacturières (1961 = 100)

L'indice des prix de vente dans l'industrie pour l'ensemble des industries manufacturières a monté de 0.9%, passant de 138.0 en avril (indice rectifié) à 139.2 en mai, ce qui représente une hausse de 9.9% par rapport à l'indice de mai 1972 (126.7). Sur les 101 industries comprises dans le total, les indices de 64 industries ont augmenté, les indices de 12 industries ont baissé et ceux de 25 industries sont restés inchangés.

Pour ce qui est de l'importance relative de chaque industrie au sein des industries manufacturières, les changements les plus appréciables ont été les progressions continues observées dans le groupe des aliments et boissons, particulièrement chez les fabricants d'aliments pour animaux et d'huiles végétales. Ces hausses des prix chez les fabricants d'aliments pour animaux ont contribué pour le tiers de l'augmentation globale de l'indice de l'ensemble des industries manufacturières. L'indice du groupe des produits du pétrole et du charbon a progressé en raison de la hausse des prix de certains produits de l'industrie du raffinage du pétrole. L'indice des industries manufacturières diverses a augmenté de façon continue à cause de la hausse des prix chez les fabricants de bijouterie et d'orfèvrerie. Les prix dans l'industrie des scieries et des ateliers de rabotage ont baissé après avoir augmenté de façon continue, passant de 144.5 en octobre 1971 à 236.6 en avril 1973.

## General Wholesale Index (1935-39 = 100)

The general wholesale price index rose 0.4% in May to 356.3 from the revised April index of 354.9. It was 16.6% higher than the May 1972 index of 305.7. Seven of the eight major group indexes were higher, while one declined.

The non-metallic mineral products group index moved up 1.4% in May to 248.9 from the revised April index of 245.5 on higher prices for petroleum products, coke and pottery. An advance of 1.0% to 316.4 from 313.2 in the textile products group index reflected price increases for woollen hosiery and knit goods, worsted yarns and cotton yarns. Slightly higher prices for grains and sharply higher prices for livestock and poultry feeds and vegetable oils and products resulted in an increase of 0.8% in the vegetable products group index to 302.9 from 300.5. The iron products group index moved up 0.8% to 349.0 from 346.3 on price increases for hardware. More moderate advances were recorded in the non-ferrous metal products group index to 306.4 from 305.0 and chemical products group index to 255.3 from 254.5. The animal products group was virtually unchanged, with price decrease for pork offsetting increases in beef prices.

The wood products group index moved slightly lower to 512.3 from 514.3, reflecting significant declines in certain lumber prices.

The following table lists the Total Index and component groupings for specified dates:

## Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros s'est élevé de passant de 354.9 en avril (indice rectifié) à 356.3 en mai, ce qui représente une hausse de 16.6% par rapport à l'indice de mai 1972 (305.7). Sept des huit indices des groupes principaux ont progressé, un seul a régressé.

L'indice du groupe des produits minéraux non métalliques a monté de 1.4%, passant de 245.5 en avril (indice rectifié) à 248.9 en mai, à la suite de l'augmentation des prix des dérivés du pétrole, du coke et de la poterie. La hausse de 1.0% de l'indice du groupe des matières textiles, qui est passé de 313.2 à 316.4, est imputable à l'augmentation des prix des bas et chaussettes, de la laine et des tricotés, des filés de laine peignée et de coton. La montée légère des prix des céréales et la montée plus marquée des prix des aliments pour le bétail et la volaille et des huiles végétales et des produits d'origine végétale s'est traduite par une augmentation de 0.8% de l'indice du groupe des produits d'origine végétale, qui est passé de 300.5 à 302.9. L'indice du groupe des produits du fer a monté de 0.8%, passant de 346.3 à 349.0 en raison de l'augmentation des prix des produits de quincaillerie. On a constaté des avances moins marquées dans le cas de l'indice du groupe des produits métalliques non ferreux, qui est passé de 305.0 à 306.4, et du groupe des produits chimiques, qui est passé de 254.5 à 255.3. L'indice du groupe des produits d'origine animale est demeuré le même, la diminution des prix du porc ayant contrebalancé l'augmentation des prix du bœuf.

L'indice du groupe des produits du bois a légèrement régressé, passant de 514.3 à 512.3 à cause de la baisse importante des prix de certains bois de sciage.

Le tableau ci-dessous présente les variations les plus importantes:

	May*	April*	May	April	% Change
	1973	1973	1972	1972	May-Mai

\* These indexes are preliminary.

## **Security Price Indexes (1961 = 100)**

The investors index of common stock prices decreased 8% to 180.1 in May from 189.1 in April. The three major groups declined; industrials declined 4.9% to 190.1, utilities 4% to 149.9 and finance 5.4% to 175.8. The index for all thirteen industrial sub-groups decreased: the most important ones were registered in textile and clothing, down 9.8% to 146.2, and in chemical products down 8.6% to 108.7. In utilities, all sub-groups declined, telephone showing the less important decrease of 0.9% to 87.8 and gas distribution the most important decline of 7.0% to 156.3. An increase in the finance index resulted from banks down 4.9% to 205.0 and investment and loans down 6.9% to 131.0.

In the same period the index of mining stock prices showed a net decrease of 0.8% to 131.2; gold increased 6.6% to 172.0 and base metals decreased 6.5% to 110.0.

Of the two supplementary indexes, uranium showed a decrease of 8.3% to 209.2 and primary oils and gas declined 10.6% to 418.1.

The preferred stock index registered a decrease of 7% to 72.5.

## **Canadian Farm Products Price Index (1935-39 = 100)**

The price index of Canadian farm products at terminal markets advanced 1.9% to 353.7 in May from the revised April index of 347.2. An increase of 2.2% to 232.5 from 227.6 in the field products index reflected higher prices for potatoes on both Eastern and Western markets and for barley, corn and oats in the East and flax, rye and hay in the West. Lower prices were shown for hay in the East. The animal products index rose 1.7% to 474.9 from the revised April index of 466.9. Higher prices for lambs and steers on both Eastern and Western markets, for hogs, eggs and poultry in the East and for raw wool, calves and fluid milk in the West. Lower prices were shown for calves in the East.

## **Thirty Industrial Materials Price Index (1935-39 = 100)**

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 1.1% to 356.6 in May from the revised April index of 352.6. Prices were higher for twelve commodities, lower for three and unchanged for fifteen. Principal changes included increases in linseed oil, raw wool, raw sugar, tin, raw rubber, hogs, rosin and raw cotton while decreases were recorded in spruce lumber and beef hides.

## **Indices des cours des valeurs mobilières (1961 = 100)**

L'indice des cours des actions ordinaires a baissé de 4.8%, passant de 189.1 en avril à 180.1 en mai. Les trois principaux groupes ont regressé; ainsi, les industrielles se sont repliées de 4.9% pour se fixer à 190.1, les services publics, de 3.4% pour se fixer à 149.9 et les finances, de 5.4% pour se fixer à 175.8. Les treize sous-groupes des valeurs industrielles ont tous diminué: les pertes les plus importantes ont été de 9.8% dans les textiles et vêtements (146.2) et de 8.6% dans les produits chimiques (108.7). Pour ce qui est des services publics, tous les sous-groupes accusent une perte; cette baisse variant entre 0.9% pour le téléphone (87.8) et 7.0% pour la distribution du gaz (156.3). La baisse de l'indice des finances est imputable à des diminutions dans les deux sous-groupes: les banques ont baissé de 4.9% (à 205.0), et les placements et prêts, de 6.9% (à 131.0).

Au cours de la même période, l'indice des prix des titres miniers montre une perte nette de 0.8% pour s'établir à 131.2; l'or a augmenté de 6.6% pour atteindre 172.0 et les métaux communs ont diminué de 6.5% pour se fixer à 110.0.

Dans le cas des deux indices supplémentaires, l'uranium a descendu de 8.3% pour s'établir à 209.2, et le pétrole et le gaz primaires ont diminué de 10.6% pour se fixer à 418.1.

L'indice des actions privilégiées a diminué de 7% pour s'établir à 72.5.

## **Indices des prix des produits agricoles canadiens (1935-39 = 100)**

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 1.9%, passant de 347.2 en avril (indice rectifié) à 353.7 en mai. La hausse de 2.2% de l'indice des produits de grande culture, qui est passé de 227.6 à 232.5, est imputable à l'augmentation des prix des pommes de terre dans l'Est et dans l'Ouest, de l'orge, du maïs et de l'avoine dans l'Est, et du lin, du seigle et du foin dans l'Ouest. On a constaté une baisse du prix du foin dans l'Est. L'indice des produits d'origine animale a monté de 1.7%, passant de 466.9 en avril (indice rectifié) à 474.9 en mai, à la suite de l'augmentation des prix des agneaux et des bouvillons sur les deux marchés, des prix des porcs, des oeufs et de la volaille dans l'Est et de la laine brute, des veaux et du lait nature dans l'Ouest. On a constaté une baisse du prix des veaux dans l'Est.

## **Indice des prix de trente matières industrielles (1935-39 = 100)**

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a progressé de 1.1%, passant de 352.6 en avril (indice rectifié) à 356.6 en mai. Les prix de douze marchandises ont augmenté, ceux de trois marchandises ont baissé et ils sont restés inchangés dans le cas de quinze marchandises. Les principaux changements comprennent une augmentation des prix de l'huile de lin, de la laine brute, du sucre brut, de l'étain, du caoutchouc brut, des porcs, des bouvillons, de la colophane et du coton brut; ils comprennent également une baisse des prix du bois d'épinette et des peaux de boeuf.

**NOTE:** Commencing with the May 1973 index, Canadian consumer price indexes incorporate the latest in a series of periodic updatings which characterize their development since the early 1900s. A feature of the latest revision is the inclusion of updated weights to reflect 1967 family expenditure patterns (and within the food component, 1969 spending habits), replacing the 1957 weights used previously. The average rate of change of consumer prices as measured by the All-Items Index over the past six years is not significantly affected by introduction of this revision, and the time reference base, 1961=100, remains unchanged. To maintain a continuous, long-term series, the revised index is linked to the previously published index for April 1973. Thus the published index up to and including April 1973 remains the official measure of consumer prices to that month, and subsequent price movements are measured by the revised index.

Full details of the latest weighting pattern and other background information on the revised Consumer Price Index, including a comparison of the movements of both the old and the revised series since 1967, are contained in an occasional paper entitled *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539, Price: 75c available from the Publications Distribution Unit, Statistics Canada, Ottawa.

The Consumer Price Index for Canada (1961=100) rose 0.7% to 148.4 in May from 147.3 in April, a greater than usual rise between these two months, as all major component indexes registered increases. About one-third of this advance was attributable to the higher Ontario sales tax. The elements for both Food and for All-Items other than Food moved up 0.8%, and among the non-food indexes, those for Housing and for Clothing each likewise rose 0.8%. Transportation moved up 0.7%. Between April and May, the indexes for Health and Personal Care and for Recreation, Education and Reading went up 1.4% and 0.6%, respectively, while that for Tobacco and Alcohol was 0.3% higher. Between May 1972 and May 1973, the All-Items Index advanced 7.3%.

The Food index rose 0.8% to 157.4 in May from 156.2 in April as prices for food eaten away from home climbed, on average, 1.2% while those for the home consumption component moved up 0.7%. The largest contributor to the increase in home-consumed foods was higher fruit and vegetable prices which registered a 6.3% advance. Fresh produce, which normally increases in price at this time of the year, was markedly higher at the beginning of May compared with a month earlier: led by a 50% increase in onion prices, fresh vegetables, on average, rose 10.7% and fresh fruit 6.7%. In contrast to these advances, the index for meat, fish and poultry registered a 1.9% decline in the latest month - its first downward movement since last November. Retail price levels in early May for pork and beef were lower, on average, 5.5% and 1.3%, respectively, compared with a month earlier.

**NOTA:** À partir de l'indice de mai 1973, les indices des prix de consommation canadiens tiennent compte de la plus récente des séries de mises à jour périodiques qui rendent compte de leur évolution depuis le début des années 1900. Une particularité de la dernière révision est l'adoption de pondérations mises à jour qui tiennent compte du rôle des dépenses de 1967 des familles (habitudes de dépenses de 1969 pour le poste aliments), pour remplacer les pondérations de 1957 utilisées jusque là. L'adoption de cette révision n'influe pas de manière significative sur le taux moyen de variation des prix à la consommation mesuré par l'indice d'ensemble des six dernières années. La période de base, 1961=100, reste inchangée. Afin de maintenir des séries à long-terme continues, l'indice révisé est rattaché en avril 1973 à l'indice précédemment publié. L'indice publié demeure donc la mesure officielle des prix à la consommation jusqu'à avril 1973, tandis que l'indice révisé rend compte des changements de prix subséquents.

On trouvera des renseignements complets sur le détail du schéma de pondérations ainsi que d'autres informations de fond au sujet de l'indice révisé des prix à la consommation, y compris une comparaison du mouvement des anciennes séries et des séries révisées depuis 1967 dans une publication occasionnelle intitulée *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, no. 62-539 au catalogue, prix 75, disponible auprès du service de distribution des publications, Statistique Canada, Ottawa.

L'indice des prix à la consommation au Canada (1961=100), est passé de 147.3 en avril à 148.4 en mai; l'augmentation de 0.7% est plus importante que celle qui se produit ordinairement à cette époque de l'année, et provient de ce que tous les indices des principaux éléments ont tous augmentés. Environ un tiers de cette avance est attribuable à l'augmentation de la taxe de vente en Ontario. L'indice des aliments et l'indice d'ensemble des produits sans les aliments ont tous deux avancé de 0.8%; parmi les autres indices, l'élément habitation et l'élément habillement ont également avancé de 0.8%. L'indice des transports a progressé de 0.7%. L'indice des soins personnels et de l'hygiène a avancé de 1.4% et l'indice des loisirs, de la formation et de la lecture de 0.6%; l'indice des tabacs et alcools a progressé de 0.3%. Entre mai 1972 et mai 1973, l'indice d'ensemble a progressé de 7.3%.

L'indice des aliments est passé de 156.2 en avril à 157.4 en mai (ce qui représente une augmentation de 0.8%, le prix des produits pris à l'extérieur ayant augmenté, en moyenne, de 1.2%, et le prix des aliments consommés à la maison, de 0.7%). Le principal facteur de la hausse du prix des aliments consommés à la maison est l'augmentation de 6.3% du prix des fruits et légumes. Le prix des fruits et légumes frais augmente généralement à cette période de l'année; toutefois, il était considérablement plus élevé au début du mois de mai qu'au début d'avril. Le prix des légumes frais a augmenté, en moyenne, de 10.7% (l'augmentation la plus forte a été celle du prix des oignons: 50%); le prix des fruits frais a augmenté de 6.7%. Par contre, l'indice de la viande, du poisson et de la volaille a diminué de 1.9% (c'est d'ailleurs la première baisse dans ce domaine qu'on enregistre depuis novembre dernier). Au début du mois de mai, le prix de vente au détail du porc est

In contrast, the poultry index edged up fractionally. Over the twelve months since May 1972, the retail price of pork rose, on average, by more than 21%, beef prices were 16% higher and poultry prices advanced nearly 25%. Though egg prices in the latest month moved up less than 1%, their level was 41% higher than a year previous. An advance of 1.7% between April and May for dairy products was largely attributable to higher fresh milk prices in the Atlantic Provinces and in Saskatchewan; increases were also registered for evaporated and powdered skim milk as well as for butter and for ice cream. On the other hand, cereal and bakery products, on average, moved down 0.4%, mainly as a result of the featuring of reduced bread prices in a few cities. Between April and May, convenience food prices were generally higher, with most frozen and prepared items registering increases. Beverage prices, including coffee, tea and soft drinks also advanced and, after six consecutive months of little change, sugar prices rose 3.2% between April and May. In the twelve months since May 1972, the Food index advanced 14.6%, with the price of food consumed at home rising 15.1% and that for food away from home 11.3%.

The Housing index advanced 0.8% to 151.3 in May from 150.1 in April because of increases of 0.7% and 1.1% in the shelter and in the household operation components, respectively. Within shelter, the homeownership element moved up 1.0% mainly because of increases in the indexes for new houses, homeowner repairs and mortgage interest; rents edged up 0.1%. Among household operation items, fuel oil prices rose in cities in the Atlantic Provinces, Quebec and northern Ontario, while electricity rates went up in some Quebec and Ontario cities. Widespread advances in furniture prices, particularly for living-room and bedroom furniture and for mattresses, moved this index up 2.0% and appliances rose 0.7% due to scattered price increases for all items surveyed. Among other home furnishings, dishes, cookware, paperies and floor coverings were higher in price. Household supply items, on average, advanced 1.9% chiefly as a result of increased prices for garden supplies, toilet paper, and cleaning articles. The household services index rose 0.4% mainly because of the impact of the higher Ontario sales tax on telephone charges. Between May 1972 and May 1973, the housing index advanced 6.4%.

The Clothing index rose 0.8% to 137.5 in May from 136.4 in April, in contrast to increases of 0.3% between these two months in 1971 and 1972. In the latest month nearly all major groups registered advances: men's wear prices rose, on average, 1.3%, women's wear 0.7% and children's wear 0.5%. Scattered price increases for men's, women's and children's shoes moved the footwear component up 1.0% between April and May, and piece goods prices, on average, were 1.0% higher. Between May 1972 and May 1973, the Clothing index rose 4.6%.

The Transportation index advanced 0.7% to 134.9 in May from 133.9 in April mainly because of a 0.9% increase in the private transportation component. New car prices rose,

boeuf avait, en moyenne, respectivement diminué de 5.5% et 1.3% par rapport à avril. L'indice de la volaille, par contre, n'a que légèrement augmenté. Depuis mai 1972, le prix de vente au détail du porc a augmenté, en moyenne, de plus de 21%, celui du boeuf, de 16%, et celui de la volaille, de près de 25%. Le prix des oeufs, même s'il a augmenté de moins de 1% depuis avril, est à un niveau supérieur de 41% à l'époque correspondante en 1972. L'avance de 1.7% du prix des produits laitiers d'avril à mai est en majeure partie attribuable à la hausse du prix du lait frais dans les provinces de l'Atlantique et en Saskatchewan; on a également enregistré des augmentations du prix du lait évaporé, du lait écrémé en poudre, du beurre et de la crème glacée. Par contre, l'indice des céréales et des produits de boulangerie a, en moyenne, fléchi de 0.4%, cette baisse est principalement attribuable aux réductions du prix du pain dans quelques villes. D'avril à mai, le prix des plats préparés a généralement augmenté, la plupart des aliments congelés et des aliments préparés ayant subi des hausses. Le prix des boissons, y compris le café, le thé et les boissons gazeuses, a également augmenté; le prix du sucre qui n'avait presque pas changé depuis 6 mois a augmenté de 3.2% d'avril à mai. Au cours des 12 derniers mois, l'indice des aliments a avancé de 14.6%, le prix des aliments consommés à la maison ayant enregistré une hausse de 15.1% et celui des repas pris à l'extérieur de 11.3%.

L'indice de l'habitation est passé de 150.1 en avril à 151.3 en mai; cette hausse de 0.8% est attribuable à une augmentation de 0.7% de l'élément logement et de 1.1% des dépenses de ménage. Pour ce qui est du logement, l'élément propriété a avancé de 1.0% en raison principalement de l'augmentation de l'indice des maisons neuves, des réparations à la charge du propriétaire et de l'intérêt hypothécaire; les loyers ont légèrement augmenté (0.1%). Au chapitre des dépenses de ménage, le prix du mazout a augmenté dans certaines villes des provinces de l'Atlantique, du Québec et du nord de l'Ontario; le prix de l'électricité a également augmenté dans certaines villes du Québec et de l'Ontario. Le prix des meubles a connu une augmentation générale de 2.0% particulièrement en ce qui concerne les meubles de salle de séjour, les meubles de chambre à coucher et les matelas; le prix des appareils ménagers a augmenté de 0.7% en raison de diverses augmentations du prix des ensembles des articles observés. Parmi les autres articles ménagers, on a enregistré une augmentation du prix de la vaisselle, des ustensiles de cuisine, des rideaux et des revêtements de sol. Les fournitures de ménage ont augmenté, en moyenne de 1.9% en raison principalement de la hausse du prix des articles de jardinage, du papier hygiénique, et des articles de nettoyage. L'indice des services au ménage a avancé de 0.4% principalement en raison de l'effet de la hausse de la taxe de vente en Ontario sur les frais de téléphone. De mai 1972 à mai 1973, l'indice de l'habitation a augmenté de 6.4%.

L'indice de l'habillement est passé de 136.4 en avril à 137.5 en mai, ce qui représente une augmentation de 0.8%; entre ces deux mois en 1971 et en 1972, l'augmentation n'avait été que de 0.3%. Presque tous les principaux groupes ont enregistré des avances; les vêtements pour hommes ont augmenté en moyenne, de 1.3%, les vêtements pour femmes, de 0.7%, et les vêtements pour enfants, de 0.5%. La hausse de 1.0% de l'élément chaussure est attribuable à diverses augmentations du prix des chaussures pour hommes, pour femmes et pour enfants; le prix des tissus à la verge a augmenté, en moyenne, de 1.0%. De mai 1972 à mai 1973, l'indice de l'habillement a augmenté de 4.6%.

L'indice des transports est passé de 133.9 en avril à 134.9 en mai; cette avance de 0.7% est principalement attribuable à une hausse de 0.9% de l'indice des transports privés. Le prix des

on average, 1.2% largely on account of higher quotations for vehicles imported from outside North America following currency revaluations. In addition, gasoline, motor oil, and tire prices moved up in a number of cities across the country. The public transportation component increased 0.4% due to a rise in the air and the rail fare indexes since the preceding month. In the twelve month period ending May 1973, the Transportation index rose 1.3%.

The Health and Personal Care index advanced 1.4% to 156.3 in May from 154.1 in April mainly as a result of a 2.2% rise in personal care prices: these services advanced 3.4% because of widespread increases in men's haircut and women's hairdressing charges, while quotations for toiletry items, on average, climbed 1.0%. Scattered increases in the price of pharmaceutical products, especially non-prescribed medicines, moved the health care index up 0.2%. Between May 1972 and May 1973, the Health and Personal Care index rose 4.9%.

The Recreation, Education and Reading index rise of 0.6% to 143.8 in May from 143.0 in April was mainly attributable to higher recreation prices. Though camera film and bicycle prices edged downwards, most other items of equipment for recreation and for home entertainment moved up in price. Higher movie admission prices were also reported in a number of cities. In the latest twelve months the Recreation, Education and Reading index advanced 3.3%.

The Tobacco and Alcohol index rose 0.3% to 136.2 in May from 135.8 in April as generally higher prices for beer and liquor consumed on licenced premises, as well as some scattered increases in the price of wine purchased for home consumption, outweighed a few price reductions for cigarettes and tobacco. In the twelve months to May 1973, the Tobacco and Alcohol index rose 2.8%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between April and May, the total goods index advanced 0.9%. Durable goods were 1.0% higher mainly as a result of increased prices for new cars, furniture, appliances and floor coverings. Semi-durable goods rose 1.0%, chiefly because of increased clothing prices, but higher prices for dishes, cookware and automobile tires also contributed. A 0.7% advance in the non-durable goods component was mostly attributable to higher prices for food, alcoholic beverages, fuel oil, gasoline and a number of toiletries and household supplies. The services index rose 0.6%, reflecting increased charges for shelter services, telephone, electricity, movie admissions, men's haircuts and women's hairdressing. Between May 1972 and May 1973, the total goods index advanced 7.8%, and that for services 6.1%.

voitures neuves a augmenté en moyenne, de 1.2%, en raison principalement de la hausse du prix des automobiles importées d'outre-mer qui a suivi les réévaluations. De plus, le prix de l'essence, de l'huile à moteur et des pneus a augmenté dans un certain nombre de villes du pays. L'indice des transports publics a augmenté de 0.4% en raison de l'indice des billets d'avion et de train. Au cours des 12 derniers mois, l'indice des transports a avancé de 1.3%.

L'indice des soins personnels et de l'hygiène est passé de 154.1 en avril à 156.3 en mai; cette avance de 1.4% est en majeure partie attribuable à une hausse de 2.2% des soins personnels. Les services de soins personnels ayant augmenté de 3.4% en raison de hausses générales du prix des coupes de cheveux pour hommes, des coiffures pour dames, et le prix des articles de toilettes a augmenté, en moyenne de 1.0%. L'indice de l'hygiène a avancé de 0.2% en raison de diverses hausses du prix de produits pharmaceutiques et particulièrement des médicaments non prescrits. De mai 1972 à mai 1973, l'indice des soins personnels et de l'hygiène a avancé de 4.9%.

L'indice des loisirs, de la formation et de la lecture est passé de 143.0 en avril à 143.8 en mai, ce qui représente une hausse de 0.6%, due principalement à l'élévation des loisirs. Bien que le prix des films pour caméra et appareil photo et des bicyclettes ait légèrement diminué, la plupart des autres articles qui composent le matériel récréatif et de la détente au foyer ont augmenté. On a également enregistré une hausse du prix d'entrée au cinéma dans un certain nombre de villes. Au cours des 12 derniers mois, l'indice des loisirs, de la formation et de la lecture a avancé de 3.3%.

L'indice des tabacs et alcools est passé de 135.8 en avril à 136.2 en mai, ce qui représente une augmentation de 0.3%. La hausse générale du prix de la bière et des spiritueux concorde avec les débits et certaines augmentations du prix du vin consommé à la maison ont en effet pesé davantage que quelques diminutions du prix du tabac et des cigarettes. Au cours des 12 derniers mois, l'indice des tabacs et alcools a avancé de 2.8%.

Si l'on classe les articles qui entrent dans l'indice des biens et services en consommation par biens et services on obtient une image différente du mouvement des prix. Ainsi, d'avril à mai, l'indice de l'ensemble des biens a avancé de 0.9%. Le prix des biens durables a augmenté de 1.0% en raison principalement de la hausse du prix des voitures neuves, des meubles, des appareils ménagers et des revêtements de sol. Le prix des biens semi-durables a augmenté de 1.0% principalement en raison de l'augmentation du prix des vêtements et également à cause de la hausse du prix de la vaisselle, des ustensiles de cuisine et des pneus d'automobile. L'avance de 0.7% des biens non durables est en majeure partie attribuable à l'augmentation du prix des aliments, des boissons alcooliques, du mazout, de l'essence, et d'un certain nombre d'articles de toilette et de fourniture de ménage. L'avance de 0.6% de l'indice des services est en partie attribuable à la hausse du prix de l'habitation, du téléphone, de l'électricité, de l'entrée au cinéma, des coupes de cheveux pour hommes et des coiffures pour dames. Entre mai 1972 et mai 1973, l'indice de l'ensemble des biens a avancé de 7.8%, et celui des services de 6.1%.

TABLE 1. Summary of Current Price Indexes  
TABLEAU 1. Récapitulation des indices des prix courants

	Indexes				Percentage changes		
	Indices				Variation proportionnelle		
	May 1973	Apr. 1973	May 1972	Apr. 1972	May 1973	May 1972	May 1973
	Mai	Avr.	Mai	Avr.	Mai 1973	Mai 1972	Mai 1973
Industrial price indexes - Indices des prix dans l'industrie							
Industry selling price index: manufacturing - 1961=100(1) - Indices des prix de vente dans l'industrie: industries manufacturières	139.2	138.0	126.7	126.5	+ 0.9	+ 0.2	+ 9.9
General wholesale index - (1935-39=100)(2) - L'indice général de gros	356.3	354.9r	305.7	303.4	+ 0.4	+ 0.8	+ 16.6
Vegetable products - Substances végétales	302.9	300.5r	239.5	238.6	+ 0.8	+ 0.4	+ 26.5
Animal products - Produits animaux	428.5	428.3r	369.0	362.1	-	+ 1.9	+ 16.1
Textile products - Produits textiles	316.4	313.2r	277.9	275.5	+ 1.0	+ 0.9	+ 13.9
Wood products - Produits du bois	512.3	514.3r	426.6	422.4	- 0.4	+ 1.0	+ 20.1
Iron products - Produits du fer	349.0	346.3r	323.2	322.8	+ 0.8	+ 0.1	+ 8.0
Non-ferrous metals - Métaux non ferreux	306.4	305.0r	261.7	261.4	+ 0.5	+ 0.1	+ 17.1
Non-metallic minerals - Minéraux non métalliques	248.9	245.5r	232.6	232.0	+ 1.4	+ 0.3	+ 7.0
Chemical products - Produits chimiques	255.3	254.5r	244.9	245.6	+ 0.3	- 0.3	+ 4.2
Canadian farm products - (1935-39=100)(3) - Produits agricoles canadiens							
Eastern - Total - De l'est	353.7	347.2r	288.5	280.8	+ 1.9	+ 2.7	(3)
Western - Total - De l'ouest	401.1	394.3r	316.2	307.2	+ 1.7	+ 2.9	+ 26.9
Field - Cultures	306.3	300.1	260.7	254.4	+ 2.1	+ 2.5	(3)
Animal - Animaux	232.5	227.6	177.9	177.4	+ 2.2	+ 0.3	(3)
	474.9	466.9r	399.0	384.3	+ 1.7	+ 3.8	+ 19.0
Selected price indexes - (2) - Certains indices de prix							
Thirty industrial materials - (1935-39=100) - Trente matériaux industriels	356.6	352.6r	293.9	290.0	+ 1.1	+ 1.3	+ 21.3
Residential building materials - (1971=100) - Matériaux de construction résidentielle	121.7	121.4	108.7	107.0	+ 0.2	+ 1.6	+ 12.0
Non-residential building materials - (1961=100) - Matériaux de construction non résidentielle	155.9	154.9	141.0	140.2	+ 0.6	+ 0.6	+ 10.6
Consumer price indexes - Canada (1961=100) - Indices des prix à la consommation							
All-items - Indice d'ensemble	148.4	147.3	138.3	138.2	+ 0.7	+ 0.1	+ 7.3
Food - Aliments	157.4	156.2	137.4	138.3	+ 0.8	- 0.7	+ 14.6
Housing - Habitation	151.3	150.1	142.2	141.6	+ 0.8	+ 0.4	+ 6.4
Clothing - Habillement	137.5	136.4	131.5	131.1	+ 0.8	+ 0.3	+ 4.6
Transportation - Transports	134.9	133.9	133.2	133.0	+ 0.7	+ 0.2	+ 1.3
Health and personal care - Soins personnels et hygiène	156.3	154.1	149.0	148.0	+ 1.4	+ 0.7	+ 4.9
Recreation, education and reading - Loisirs, formation et lecture	143.8	143.0	139.2	138.3	+ 0.6	+ 0.7	+ 3.3
Tobacco and alcohol - Tabacs et alcools	136.2	135.8	132.5	132.1	+ 0.3	+ 0.3	+ 2.8
Security price indexes - (1961=100) - Indices des cours des valeurs mobilières							
Investors index - Total - Indices des portefeuillistes	180.1	189.1	169.8	168.8	- 4.8	+ 0.6	+ 6.1
Industrial - Total - Industriels	190.1	199.9	172.6	170.7	- 4.9	+ 1.1	+ 10.1
Industrial mines - Mines industrielles	125.2	134.2	125.0	130.3	- 6.7	- 4.1	+ 0.2
Foods - Aliments	153.4	158.7	140.8	133.7	- 3.3	+ 5.3	+ 8.9
Beverages - Boissons	248.2	253.1	230.4	223.1	- 1.9	+ 3.3	+ 7.7
Textiles and clothing - Textiles et vêtements	146.2	162.0	178.6	159.1	- 9.8	+ 12.3	- 18.1
Pulp and paper - Pâte et papier	125.5	132.8	99.5	95.4	- 5.5	+ 4.3	+ 26.1
Printing and publishing - Impression et édition	366.5	388.0	316.6	304.8	- 5.5	+ 3.9	+ 15.8
Primary metals - Métaux primaires	116.0	119.5	107.2	106.1	- 2.9	+ 1.0	+ 8.2
Metal fabricating - Fabrications des métaux	204.5	207.7	186.4	180.8	- 1.5	+ 3.1	+ 9.7
Non-metallic minerals - Minéraux non métalliques	184.4	190.6	171.4	170.4	- 3.3	+ 0.6	+ 7.6
Petroleum - Pétrole	307.6	327.6	261.6	259.9	- 6.1	+ 0.7	+ 17.6
Chemicals - Produits chimiques	108.7	118.9	113.2	106.8	- 8.6	+ 6.0	- 4.0
Construction - Construction	142.9	145.8	103.6	98.1	- 2.0	+ 5.6	+ 37.9
Retail trade - Commerce de détail	168.0	177.5	161.9	159.2	- 5.4	+ 1.7	+ 3.8
Utilities - Total - Services publics	149.9	155.2	154.9	156.1	- 3.4	- 0.8	- 3.2
Pipeline - Pipe-line	157.7	167.1	189.8	191.9	- 5.6	- 1.1	- 16.9
Transportation - Transport	348.7	355.1	296.1	293.8	- 1.8	+ 0.8	+ 17.8
Telephone - Téléphone	87.8	88.6	92.0	92.1	- 0.9	- 0.1	- 4.6
Electric power - Énergie électrique	118.6	124.5	122.2	123.7	- 4.7	- 1.2	- 2.9
Gas distribution - Distribution du gaz	156.3	168.0	191.5	199.7	- 7.0	- 4.1	- 18.4
Finance - Total - Finances	175.8	185.8	179.4	180.2	- 5.4	- 0.4	- 2.0
Banks - Banques	205.0	215.5	210.4	213.0	- 4.9	- 1.2	- 2.6
Investment and loan - Placements et prêts	131.0	140.7	131.2	128.8	- 6.9	+ 1.9	- 0.2
Mining - Actions minières							
Mining index - Total - Indices des prix des titres miniers	131.2	132.3	117.5	115.0	- 0.8	+ 2.2	+ 11.7
Gold - Or	172.0	161.4	117.2	106.8	+ 6.6	+ 9.7	+ 46.8
Base metals - Métaux communs	110.0	117.6	118.7	120.5	- 6.5	- 1.5	- 7.3
Supplementary indexes - Indices supplémentaires							
Uranium - L'uranium	209.2	228.1	176.4	177.0	- 8.3	- 0.3	+ 18.6
Primary oils and gas - Pétrole et gaz primaires	418.1	467.6	443.9	465.1	- 10.6	- 4.6	- 5.8

- (1) Gross weighted, including inter-industry shipments. For explanation see page 88. Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication, voir page 88.
- (2) Indexes for 1973 are subject to revision. - Les indices pour 1973 sont sujets à révision.
- (3) Year to year percentage change not shown since these indexes are not comparable. Indexes subsequent to July 1972 are subject to revision. See notes page 89 for details of Western grain prices. - La variation proportionnelle d'une année à l'autre n'est pas indiquée étant donné que ces indices ne sont pas comparables. Les indices postérieurs à juillet 1972 sont sujets à révision. Voir les renvois de la page 89 pour les prix détaillés des grains de l'Ouest.

TABLE 2. INDUSTRY SELLING PRICE INDEXES BY INDUSTRY AND SELECTED COMMODITIES  
TABLEAU 2. INDICE DES PRIX DE VENTE DANS L'INDUSTRIE PAR INDUSTRIE ET PAR CERTAINS PRODUITS

1961 = 100

Industries and selected commodities(1) Industrie et certains produits(1)	Month — Mois												Annual Annuel
	J	F	M	A	M	J	J	A	S	O	N	D	
(5) Industry selling price index: manufacturing — Indice des prix de vente dans l'industrie: industries manufacturières	1969	114.5	115.0	115.6	115.9	116.3	116.7	116.4	116.6	116.8	117.2	117.2	116.3
	1970	119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.8	119.1
	1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	121.6
	1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	127.4
	1973	133.0	134.5	136.5	138.0	139.2							

- (1) Indexes for 1972 and 1973 are subject to revision. — Les indices pour 1972 et 1973 sont sujets à révision.  
 (2) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. — A compter  
 (3) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. — Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels:

	Old Series — Ancienne série	New series — Nouvelle série
December — 1970 — Décembre	95.1	92.3
January — 1971 — Janvier	95.1	92.1
Average — 1971 — Moyenne	95.2	91.8

- (4) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. — Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augmentée des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul des prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.  
 (5) Gross weighted, including inter-industry shipments. For explanation see page 88 — Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88

ALL-ITEMS Consumer Price Index Converted to 1949=100 - May 1973 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Mai 1973 ..... 191.7

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

TABLE 9. Consumer Price Indexes for Canada - Main Groups and Selected Components and Items(1)  
TABLEAU 9. Indices des prix à la consommation, Canada - Groupes principaux, éléments et articles choisis(1)  
(1961=100)

	May 1973 Mai	April 1973 Avril	May 1972 Mai	April 1972 Avril	1972	1971	1970
All-items - Indice d'ensemble .....	148.4	147.3	138.3	138.2	139.8	133.4	129.7
Food - Aliments .....	157.4	156.2	137.4	138.3	141.4	131.4	130.0
Food for home consumption - Aliments consommés à la maison .....	153.4	152.3	133.3	134.4	137.5	127.4	126.8

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

June - Juin ....										

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

- (1,2) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).  
(2) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contract profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.  
(3) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.  
(4) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.  
(5) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

- (1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.
- (2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.
- (3) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des Prix dans la Construction, no 62-006.
- (4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

Not included in the Forestry machinery and equipment, East of the Rockies, composite index. - Non inclus dans

l'indice synthétique de la machinerie et matériel forestiers à l'est des Rocheuses.

## Explanation of Methods Used and Additional Sources for Price Series

### Industrial Price Indexes

#### Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

#### Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

#### 'Iron & Steel Mills:' 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

## Explication des méthodes utilisées et sources supplémentaires des séries de prix

### Indices des prix industriels

#### Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix et d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le «recensement des manufactures», les bulletins sur les enquêtes annuelles au cours desquelles sont recueillies des statistiques sur les expéditions de produits, l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise sont pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans: «Indices des prix de vente dans l'industrie, 1956-68», n° 62-528 au catalogue.

#### Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits, tels que le pain, les biscuits ou les gâteaux.

#### 'Sidérurgie:' 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série «barres, laminés à chaud, etc.» (12-2910-082) en septembre 1972 et de la série «tôles et feuillards, laminés à chaud, etc.» (12-2910-084) en octobre 1972. Ils sont toutefois inclus dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to mill.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

# Purchase Price Indexes of Secondary Metals (1969 = 100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

# Indices du prix d'achat des métaux de deuxième fusion (1969 = 100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

# Canadian Farm Products Price Index (1935-39 = 100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14% at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised further payments are announced.

# Indice des prix des produits agricoles canadiens (1935-39 = 100)

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. À compter du 1er août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14%) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Final payments for the crop year August 1971 - July 1972 were announced on February 13, 1973 for wheat and oats. No final payment was granted for barley.

Les prix définitifs pour la campagne allant d'août 1971 à juillet 1972 ont été annoncés le 13 février 1973, en ce qui concerne le blé et l'avoine. Il n'y a pas eu de dernier paiement pour l'orge.

Used in Indexes Aug. 1972 to July 1973. - Utilisé dans les indices d'août 1972 jusqu'en juillet 1973.

## General Wholesale Index (1935-39=100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: Wholesale Price Indexes 1913-50 (Reference Paper No. 24) Prices and Price Indexes 1949-52 (Vol. 23) (Catalogue No. 62-501).

## Thirty Industrial Materials, (1935-39=100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

---

$$\sqrt[30]{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}$$

## Indice général des prix de gros (1935-39=100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est «général» du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé «de gros» parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression «de gros» fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des «intermédiaires» qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de dire exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, l'indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 catalogue).

## Indice des prix de trente matières industrielles (1935-39=100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{P^1_{tN} \times P^2_{tN} \times P^3_{tN} \times \dots \times P^{30}_{tN}}$$

---

$$\sqrt[30]{P^1_{t\ 35-39} \times P^2_{t\ 35-39} \times P^3_{t\ 35-39} \times \dots \times P^{30}_{t\ 35-39}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix «stables», (12 matières), prix des aliments (5 matières) et prix «variables» (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

## RETAIL PRICE INDEXES

### The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there is a continually measurable market price over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

### The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise

## INDICES DES PRIX DE DÉTAIL

### L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure la variation dans le temps du coût à l'achat d'un «panier» composé de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le «panier» est constitué par des biens et des services en quantités constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité de familles urbaines et rend compte des changements de prix de ceux de ce «groupe cible» doit faire face. L'indice peut ne pas refléter les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la famille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, l'indice a aligné la base de temps de 1949=100 à 1961=100; des détails de ces renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids ou l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépenses des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du nouveau schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

### L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé «L'indice des prix à la consommation au Canada reclassé par biens et services», a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments

Index. In it, all items in the C.P.I. have been reclassified into two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no 7.

### Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

### Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services

l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication «Prix de détail et coût de la vie» — Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

### Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

### Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent,

that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ( $\$1.00 \times 100.0/144.5 = \$0.69$ ).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

### Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is  $\$90.91 ((100.0/110.0) \times \$100)$ , which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix liée à la baisse du pouvoir d'achat de la monnaie, et la baisse de prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ( $\$1.00 \times 100.0/144.5 = \$0.69$ ).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (Tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., il n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

### Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut être calculée en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des salaires moyens si les prix à la consommation et les tendances de la consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 par le montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera  $\$90.91 ((100.0/110.0) \times \$100)$ , que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6  $((90.91/80.00) \times 100)$ . Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 5% rise in money wages  $((\$100.00 - \$80.00)/\$80.00 \times 100)$ .

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4  $((146.23/74.45) \times 100)$ . The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98  $((146.23/142.0) \times 100)$ . (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3  $((102.98/74.45) \times 100)$ .

It should be noted that while the estimates of average wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, wage data adjusted by the consumer price index (which is a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce earnings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6  $((90.91/80.00) \times 100)$ . On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. L'augmentation de 25% des salaires se ramène donc à une augmentation effective de 13.6%  $((\$100.00 - \$80.00)/\$80.00 \times 100)$ .

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4  $((146.23/74.45) \times 100)$ . Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98  $((146.23/142.0) \times 100)$ . (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3  $((102.98/74.45) \times 100)$ .

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées «fixes») perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du

"take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

### Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971

revenu disponible en raison de facteurs tels que l'évolution l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés en rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne des familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau en s'adressant à la Division du travail, Statistique Canada.

### Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services composant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherches. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons de prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour des mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969 et avril 1972 de *Prix et indices des prix* (no 62-002 catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et assortissant autant que possible les points de vente au détail de type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves pour lesquelles les différences de prix entre villes ont été tirées

ce data, the updating of these measurements of inter-city retail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the areas covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables. Table 14 is now under review and it is expected that the revised table will incorporate the more recent expenditure patterns.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

#### Urban Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. The data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, the Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Family Living Index and a Composite Index Exclusive of Farming Component. The Farm Input Price Indexes replace

directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation. Le tableau 14 est actuellement en cours de révision, et l'on s'attend à ce que le tableau révisé comprenne les plus récentes tendances de consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

#### Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans

the Composite Index Exclusive of Living Component from 1961 forward.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes, 1961=100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes, 1961=100, Component from 1* Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

### Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the *Globe and Mail* and the *Montreal Gazette*. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of price in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new subgroups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (re-named Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former

l'agriculture remplacent l'indice synthétique sans le coût de l' à partir de 1961.

Le bulletin hors série *Farm Input Price Indexes, 1961=100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui sont reprises dans *Prices and Price Indexes* de septembre 1971 (no 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961=100* (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour on a cessé de la publier.

### Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un pla hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix des titres ordinaires et des titres miniers sont les cours de fermeture à la Bourse du jeudi indiqués dans le *Globe and Mail* et dans le *Montreal Gazette*. Pour les actions privilégiées, les prix sont des moyennes pondérées mensuelles. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des valeurs quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base 1961=100. Les indices sont pondérés d'après le nombre d'actions en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, matériel et matériaux de construction) ont été remplacés par 8 nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et papier, huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des lignes a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe «Finances» est composé de l'ancien grand groupe

plementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

For the list of stocks currently included in the Investment and Preferred Index, see *Prices and Price Indexes* February 1973.

banques et de l'ancien indice supplémentaire investissements et prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de février 1973.

## Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators<sup>(1)</sup> providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966, a special sample or respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system<sup>(2)</sup>. The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

### Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (62-002). This index is found in Table 20 of *Prices and Price Indexes* (62-002). Full trade detail, by city, is published quarterly in the *Construction Price Statistics Service Bulletin*, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service*

(1) Gross National Product Division, Statistics Canada.

(2) *Industry Selling Price Indexes 1956-1968* Cat. 62-528.

## Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices—and—Price—Indexes* mai 1970. On peut s'en procurer un exemplaire ainsi qu' des données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'oeuvre du bâtiment, plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement<sup>(1)</sup> des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et des marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtes a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I.<sup>(2)</sup>. Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers secteurs de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices sont recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

### Indices du salaire syndical de base dans les principaux métiers

Les indices du salaire syndical de base portent sur 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication *Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiées chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service*

(1) Division du produit national brut, Statistique Canada.

(2) *Indices des prix de vente dans l'industrie, 1956-1968* no 62-528 au catalogue.

provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some local areas. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of eight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

### Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published all-items indexes. The conversion does not create a problem for a user wishing to reweight the converted major group indexes using weights appropriate to their own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956, are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper *Price Indexes of Highway Construction in Canada*, Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously completed roadwork, and as historical measurements of price changes in highway construction.

The indexes do not necessarily reflect the price changes of non-contract construction or maintenance work. The indexes are designed to measure price changes for the programme of highway construction, in each of the

The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

ment Survey Service de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Étant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux des métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation des variations dans les taux de salaire dans la construction non résidentielle.

### Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentage des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représenté par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 et 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou à mettre à jour les prix de travaux de routes effectués précédemment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as culvert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

### Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific shortcomings. Nonetheless, they may be helpful for such purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section III, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate to specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate component indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale

sept provinces. Au cours de la période qui a servi de base (1961) les niveaux de prix ont varié d'une province à l'autre; aussi, on peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cubique ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certains matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission par les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par les ministères aux fournisseurs.

### Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice se mesure combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice des prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se reporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants composent les indices synthétiques présentés ici ne conviennent pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités

representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban on account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and right-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

#### Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which is described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

mesure et des conditions de vente valables pour les ventes en grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ces cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façon à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, de lignes de transport d'énergie, de postes de transformation ou de postes de manoeuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de la distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses en main-d'oeuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de manoeuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de cette enquête.

#### Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

#### Price Indexes of Machinery and Equipment

In response to the need of users wishing either to correct expenditure data of machinery and equipment for price change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100 and most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in such indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty exchange and federal sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices Division collections from manufacturers most of whom reside in the United States.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain

- (a) Les données sur le taux de rémunération proviennent diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base avant avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêt pendant la construction, frais généraux, fourniture et entretien de baraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

#### Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices des prix des marchandises du *U.S. Bureau of Labour Statistics* ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre

modity indexes which exclude adjustments for exchange, and federal sales tax can also be provided on request.

d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.

# PRICES AND PRICE INDEXES

# NOTES SUR LES PRIX ET LES INDICES DE PRIX

Industry Selling Price Index: Manufacturing (1961=100)

The industry selling price index for manufacturing advanced 1.0% in June to 140.8 from the May level of 139.4. This was 11.0% higher than the June 1972 index of 126.9. Of the 101 industries included, 58 were higher, 10 lower and 33 unchanged. Month-to-month advances in the index continued to show a significantly higher rate of advance than was evident for most of 1972.

Notable advances in June were in the foods and beverage group, particularly in slaughtering and meat packing and feed mills. Price increases for smelting and refining helped push the primary metals group higher and the level moved up in the copper and alloy, rolling, casting and extruding industries. The miscellaneous manufacturing group moved up with higher prices in the jewellery and silverware industry.

Most declines were insignificant except for the wood products group, where the index dipped sharply for sawmills and planing mills.

Indice des prix de vente dans l'industrie: Fabrication (1961=100)

L'indice des prix de vente dans l'industrie (toutes industries manufacturières) a progressé de 1.0% en juin, passant de 139.4 en mai à 140.8. Il était de 11.0% supérieur à l'indice de juin 1972 (126.9). Sur les 101 indices composant le total, 58 ont augmenté, 10 ont baissé et 33 sont restés inchangés. L'accroissement mensuel de l'indice continue à rendre compte d'un taux de croissance sensiblement plus élevé en 1973 que pendant la plus grande partie de 1972.

Pour ce qui est de l'importance relative de chaque industrie au sein des industries manufacturières, les variations les plus appréciables ont été les augmentations continues observées dans le groupe des aliments et boissons, principalement dans le cas de l'abattage et du conditionnement de la viande, et des fabricants d'aliments pour animaux. L'indice du groupe des métaux primaires a augmenté, à la suite d'une hausse des prix dans l'industrie de la fonte et de l'affinage, et dans celles du laminage, du moulage et de l'extrusion du cuivre et de ses alliages. On a noté des progressions ininterrompues dans le groupe des industries manufacturières diverses par suite d'une hausse des prix dans l'industrie de la bijouterie et de l'argenterie.

Les baisses ont été relativement mineures, sauf dans le groupe des produits du bois, où l'on a constaté une forte baisse dans le cas des scieries et ateliers de rabotage.

## General Wholesale Index (1935-39 = 100)

The general wholesale price index rose 1.8% in June to 364.5 from the May level of 357.9. The June index was 19.0% higher than for the same month in 1972 when it was 306.4. Six of the eight major group indexes were higher while two declined.

The vegetable products group index jumped 6.9% in June to 326.0 from May's 305.0. Prices were higher for potatoes, grains, livestock and poultry feeds and vegetable oils and products. Higher prices for fresh and cured meat, livestock and fishery products pushed the animal products group index up 1.9% to 437.5 from 429.2. Price increases for copper and zinc and their products helped the non-ferrous metals group index to a June level of 316.5, up 2.7% from 308.2 in May. The iron products group advanced 1.0% to 353.0 from 349.4 on price increases for wire, scrap iron and rolling mill products. The textile products group index advanced 0.8% to 325.3 from 322.7. Prices were higher for worsted and wool cloth and imported raw wool.

There was a decline of 1.5% in the wood products index, as prices for fir, hemlock and cedar moved lower, and a fractionally lower level in the chemical products group.

## Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros a progressé de passant de 357.9 en mai (indice rectifié) à 364.5 en juin, ce qui représente une hausse de 19.0% par rapport à l'indice de juin (306.4). Six des huit indices des groupes principaux ont monté et deux ont baissé.

L'indice du groupe des produits d'origine végétale a été élevé de 6.9%, passant de 305.0 en mai (indice rectifié) à 326.0 en juin, à la suite de la hausse des prix des pommes de terre, céréales, des aliments pour bétail et volaille et des huiles et substances végétales. La hausse de 2.7% de l'indice du groupe des produits métalliques non ferreux, qui est passé de 308.2 à 316.5, est imputable à l'augmentation des prix du cuivre et de ses produits et du zinc et de ses produits. La montée des prix des viandes fraîches et salées, des produits du bétail et de la pêche s'est traduite par l'augmentation de 1.9% de l'indice du groupe des produits d'origine animale, qui est passé ainsi de 429.2 à 437.5. L'indice du groupe des produits du fer a grimpé de passant de 349.4 à 353.0 à la suite de la hausse des prix du fer, des déchets de fer et des produits des usines de laminage. L'avance de 0.8% de l'indice du groupe des produits textiles, qui est passé de 322.7 à 325.3, s'est traduite par la montée des prix des tissus de laine peignée et de laine, et de la laine brute importée.

L'indice du groupe des produits du bois a regressé de passant de 512.9 à 505.1, en raison de la baisse des prix du sapin de la pruche et du thuya.

\*These indexes are preliminary.

### Security Price Indexes (1961 = 100)

The investors index of common stocks decreased 0.7% to 178.9 in June from 180.1 in May. Within the three major groups, industrials remained unchanged at 190.1, utilities declined 2.5% to 146.2, and finance decreased 2.4% to 171.6. Within the thirteen industrial sub-groups, chemicals decreased 4.5% to 103.8, followed by food, which declined 4.0% to 147.3; primary metals and pulp and paper increased 1.6% and 1.4% to 117.8 and 127.3 respectively. For utilities, all but one sub-group registered declines, ranging from 3.9% for pipelines (151.6) to 1.9% for telephone (86.1); gas distribution increased 1% to 157.9. In the finance major group, banks declined 1.8% to 201.4, and investment and loans decreased 4.2% to 125.5.

In the same period, the index of mining stocks prices increased 2% to 133.8. Golds gained 3.1% to 177.4 and base metals, 1.1% at 111.2.

Of the two supplementary price indexes, there was a 9% increase for uranium, to 219.5, and a 6.3% decrease for primary oils and gas, to 391.8.

The preferred stock index eased 1.8% to 71.2.

### Canadian Farm Products Price Index (1935-39=100)

The price index of Canadian farm products at terminal markets advanced 3.4% to 366.2 in June from the revised May index of 354.3. An increase of 7.1% to 249.1 from 232.5 the field products index reflected higher prices for potatoes and rye on both Eastern and Western markets, and for corn, barley, oats and hay in the East and for flax in the West.

The animal products index rose 1.5% to 483.3 from the revised index of 476.1 on higher prices for eggs and steers on both Eastern and Western markets, and for calves and hogs in the East and lambs and fluid milk in the West.

### Thirty Industrial Materials Price Index (1935-39=100)

The price index of thirty industrial materials, calculated as an unweighted geometric average, moved up 2.8% to 369.7 in June from the revised May index of 359.5. Prices were higher for fourteen commodities, lower for two and unchanged for fourteen. Principal changes included increases in linseed oil, raw rubber, domestic wheat, oats, domestic steel, structural shapes, steel scrap, steers, raw sugar and hogs. Decreases were recorded for beef hides and spruce lumber.

### Indices des cours des valeurs mobilières (1961 = 100)

L'indice des cours des actions ordinaires a baissé de 0.7% passant de 180.1 en mai à 178.9 en juin. Parmi les trois grands groupes, les valeurs industrielles demeurent inchangées à 190.1, les services publics ont baissé de 2.5% pour s'établir à 146.2, et les finances ont diminué de 2.4% pour s'établir à 171.6. Parmi les treize sous-groupes industriels, les produits chimiques ont baissé de 4.5% pour se fixer à 103.8, suivis par le sous-groupe aliments qui a diminué de 4.0% pour s'inscrire à 147.3; les métaux primaires ainsi que les pâtes et papiers ont monté de 1.6% et de 1.4% pour s'inscrire à 117.8 et 127.3 respectivement. Pour ce qui est des services d'utilité publique, chacun des sous-groupes, sauf un, a enregistré une baisse allant de 3.9% pour les pipelines (151.6) à 1.9% pour le téléphone (86.1); les valeurs pour la distribution du gaz ont augmenté de 1.0% pour atteindre 157.9. Quant aux finances les banques ont baissé de 1.8% pour se fixer à 201.4 tandis que les placements et prêts diminuaient de 4.2% pour s'établir à 125.5.

Au cours de la même période, l'indice des titres miniers a augmenté de 2.0% pour s'inscrire à 133.8. Les aurifères ont gagné 3.1% à 177.4, et les métaux communs, 1.1% à 111.2.

Pour ce qui est des deux indices supplémentaires, on a noté une hausse de 4.9% de l'uranium à 219.5 tandis que le pétrole et le gaz primaires se repliaient de 6.3% à 391.8.

L'indice des actions privilégiées a diminué de 1.8% à 71.2.

### Indice des prix des produits agricoles canadiens (1935-39 = 100)

L'indice des prix des produits agricoles canadiens sur les marchés terminaux a progressé de 3.4% pour passer de 354.3 en mai à 366.2 en juin. Une hausse de 7.1% de l'indice des produits de grande culture, qui est passé de 232.5 à 249.1, était imputable à une augmentation du prix des pommes de terre et du seigle dans l'Est et dans l'Ouest, du maïs, de l'orge, de l'avoine et du foin dans l'Est, et du lin dans l'Ouest.

L'indice des produits d'origine animale est passé de 476.1 à 483.3, soit une hausse de 1.5%, due à l'augmentation du prix des oeufs et des bouvillons sur les marchés de l'Est et de l'Ouest, des veaux et des porcs dans l'Est et des agneaux et du lait naturel dans l'Ouest.

### Indice des prix de trente matières industrielles (1935-39 = 100)

L'indice des prix de trente matières industrielles, calculé comme moyenne géométrique non pondérée, a progressé de 2.8% pour passer de 359.5 en mai à 369.7 en juin. Le prix de quatorze marchandises a augmenté, le prix de deux marchandises a baissé, et, il n'y a eu aucun changement dans le cas de quatorze marchandises. Les principaux changements comprennent une augmentation du prix de l'huile de lin, du caoutchouc brut, du blé canadien, de l'avoine, du zinc canadien, des profilés de charpente, des résidus d'acier, des bouvillons, du sucre brut et des porcs, tandis qu'on enregistrerait une baisse du prix des peaux de boeuf et des sciages d'épinette.

## Consumer Price Movements

The Consumer Price Index for Canada (1961 = 100) rose 0.9% to 149.7 in June from 148.4 in May, a greater than usual rise between these two months as most major components registered increases. Food prices, which advanced 2.0%, were a major contributor to the latest month's increase. The level of prices for All-Items other than Food rose 0.5% as the Housing index increased 0.5% and that for Transportation 0.9%. The Clothing component rose 0.4% while the indexes for Tobacco and Alcohol and Recreation, Education and Reading both edged up 0.1%. The index for Health and Personal Care remained unchanged. Between June 1972 and June 1973, the All-Items Index advanced 8.1%.

The Food index rose 2.0% to 160.5 in June from 157.4 in May. This latest advance is in sharp contrast to the increases of 0.1% and 0.2% that occurred between May and June of 1972 and 1971, respectively, but compares with an advance of 2.2% between these two months in 1969. In the latest month, prices for food eaten away from home rose, on average, 0.6% while those for the home consumption component climbed 2.2%. Although all main elements of home-consumed foods registered increases, the major contributors were fresh produce, beef and poultry. Fresh produce, which normally increases in price at this time of year, was markedly higher in June than a month earlier. Prices of fresh vegetables rose, on average, 8.7% as higher quotations for — amongst other items — potatoes, lettuce and tomatoes, outweighed decreases for other vegetables. Fresh fruit prices advanced 5.1% with most items surveyed recording increases. Over the past twelve months, the indexes for fresh vegetables and fresh fruit have climbed over 51% and over 23%, respectively. The meat, poultry and fish index, which recorded a decline in early May, advanced 2.7% in the latest month with beef and poultry prices increasing 5.1% and 2.3%, respectively. Pork prices rose 0.5%. Since June 1972, the retail price of beef rose, on average, 21%, pork prices were almost 22% higher and poultry prices advanced over 26%. Between May and June, egg prices rose 2.0% to stand over 61% above their level of a year previous. A rise of 1.0% in the cereal and bakery products index in the latest month was mainly the result of higher bread and breakfast cereal prices. Prices of dairy products rose, on average, 0.3% largely because of increases for ice cream, evaporated and powdered skim milk. The index for fats and oils, including margarine, shortening, cooking oil and salad dressing, advanced 1.4%. Convenience food prices generally rose between May and June, with a number of frozen and prepared items recording increases. Beverage prices, including coffee, tea and soft drinks also advanced and, amongst other food items, increases were registered for sugar, jelly powder and catsup. In the twelve months since June 1972, the Food index advanced 16.7% with the price of food consumed at home rising 17.7% and that for food away from home 11.1%.

The Housing index advanced 0.5% to 152.1 in June from 151.3 in May because of increases of 0.4% and 0.6% in

## Mouvements des prix à la consommation

L'indice des prix à la consommation au Canada (1961 = 100) a augmenté de 0.9% passant de 148.4 en mai à 149.7 en juin, soit un accroissement supérieur à celui normalement enregistré entre ces deux mois; cette avance est imputable à l'augmentation des principaux éléments. La hausse du prix des aliments de 2.0% a été le principal facteur de l'augmentation du mois dernier. Le niveau des prix de tous les éléments autres que les aliments a progressé de 0.5%, l'augmentation étant de 0.5% pour l'indice de l'habitation et de 0.9% pour les transports. L'élément "habillement" a augmenté de 0.4%, alors que les indices de tabac et alcools et des loisirs, de la formation et de la lecture ont tous deux progressé de 0.1%. L'indice des soins personnels et d'hygiène est demeuré stationnaire. De juin 1972 à juin 1973, l'indice d'ensemble a progressé de 8.1%.

L'indice des aliments s'est accru de 2.0% et atteint 160.5 en juin, contre 157.4 en mai. Cet accroissement contraste avec les augmentations de 0.1% et 0.2% enregistrées de mai à juin 1972 et 1971, mais se compare avec l'avance de 2.2% entre ces deux mois en 1969. Le mois dernier, les prix des aliments pris à l'extérieur ont augmenté en moyenne de 0.6% alors que ceux consommés à la maison ont augmenté de 2.2%. Bien que les principaux produits alimentaires consommés à la maison aient enregistré des hausses, les principaux facteurs de cette avance ont été les fruits et légumes frais, le boeuf et la volaille. Les fruits et légumes frais augmentent normalement de prix à cette époque-ci de l'année; ils vendaient bien plus cher en juin que le mois précédent; leur prix a augmenté en moyenne de 8.7% parce que la hausse du prix d'aliments tels que les pommes de terre, la laitue et les tomates a plus de poids que les baisses du prix des autres légumes. Le prix des fruits frais a avancé de 5.1%, l'augmentation touchant la plupart des produits observés. Au cours des douze derniers mois, les indices des légumes et des fruits frais ont augmenté respectivement de plus de 51% et 23%. L'indice de la viande, de la volaille et du poisson, qui a enregistré une diminution au début de mai, a augmenté de 2.7% le mois dernier en raison d'une hausse de 5.1% du boeuf et de 2.3% de la volaille. Le prix du porc a augmenté de 0.5%. Depuis juin 1972, le prix de détail du boeuf a augmenté en moyenne de 21%, le prix du porc ayant avancé de presque 22% et celui de la volaille, de plus de 26%. De mai à juin le prix des oeufs a augmenté de 2.0% pour s'établir à plus de 61% au-dessus de ce qu'il était l'année précédente. La hausse de 1.0% de l'indice des céréales et des produits de boulangerie le mois dernier est attribuable à une hausse du prix du pain et des céréales de table. Les produits laitiers s'est accru en moyenne de 0.3% principalement à cause de la hausse du prix de la crème glacée, du lait évaporé et du lait écrémé en poudre. L'indice des huiles et corps gras, y compris la margarine, la graisse végétale, l'huile de cuisson et de la vinaigrette, a progressé de 1.4%. Les prix des aliments-minute ont en général augmenté de mai à juin, un certain nombre de produits congelés et de mets préparés enregistrant des augmentations. Le prix des boissons, y compris le café, le thé et les boissons gazeuses, a également progressé; parmi les autres produits alimentaires, le sucre, la poudre à gelée et le ketchup ont enregistré des hausses de prix. Au cours des douze derniers mois, l'indice des aliments a progressé de 16.7% suite à l'augmentation de 17.7% du prix des aliments consommés à la maison et de 11.1% des repas pris à l'extérieur.

L'indice de l'habitation s'est accru de 0.5%, passant de 151.3 en mai à 152.1 en juin en raison de l'augmentation de 0.4% et 0.6% en

the shelter and in the household operation components, respectively. Within shelter, the home-ownership element moved up 0.4% as a result of increases in the indexes for mortgage interest, new houses and homeowner repairs; rents rose 0.3%. Among household operation items, higher fuel oil prices were reported in cities in Ontario, Manitoba, Saskatchewan and British Columbia. The furniture index advanced 0.3% because of widespread price increases for furniture items, particularly dining-room and living-room furniture and mattresses. Appliance prices rose, on average, 0.7% as higher quotations were recorded for several items. Among other home-furnishings, draperies, dishes and cookware were higher in price. Prices of household supply items advanced 0.2%, on average, chiefly as the result of increased quotations for cleaning articles and light bulbs. In the twelve-month period ending June 1973, the Housing index rose 6.7%

The Clothing index rose 0.4% to 138.1 in June from 137.5 in May mainly because of increased clothing service charges and higher prices for men's and children's wear. Charges for clothing services advanced 2.5% due to higher prices for laundry, dry cleaning and shoe repairs. A 0.4% rise in the men's wear index reflected higher quotations for many items including suits, shirts, underwear and hosiery. Children's clothing also advanced 0.4% but the index for women's wear remained unchanged as price rises for some items were offset by reductions in others. Footwear prices rose, on average, 0.3% as scattered increases were recorded for all items surveyed. Higher quotations for synthetic and cotton and cotton blend fabrics moved the piece goods index up 0.2%. Between June 1972 and June 1973, the Clothing index rose 5.2%.

The Transportation index rose 0.9% to 136.1 in June from 134.9 in May as price increases were recorded in both private and the public transportation components. Within the former, an advance of 1.4% in the automobile operation and maintenance index was largely attributable to widespread increases in gasoline and motor oil prices. New car prices rose 0.3% mainly because of higher prices for vehicles imported from outside North America. The advance in the public transportation component was caused by a rise in the train fares index and by some increases in inter-city bus fares. Between June 1972 and June 1973, the Transportation index rose 1.9%.

In June, the Health and Personal Care index was unchanged from its May level of 156.3. Quotations for beauty items fell, on average, but were offset by higher charges for men's haircuts in Quebec City. In the twelve-month period ending June 1973, the Health and Personal Care index rose 5.0%.

The Recreation, Education and Reading index rose 0.1% to 144.0 in June from 143.8 in May as a decline in the recreation component was outweighed by increases in the education and reading elements. Higher prices for some magazines and increased driving lesson fees in most major cities were responsible for advances in the reading and

de l'élément "logement" et de 0.6% des dépenses de ménage. Dans le cas du logement, l'élément "propriété" a progressé de 0.4% par suite de l'augmentation de l'intérêt hypothécaire, du prix des maisons neuves et des frais de réparations à la charge du propriétaire. Les loyers ont augmenté de 0.3%. Quant aux éléments d'entretien du ménage, une hausse de prix de mazout a été signalée dans certaines villes de l'Ontario, du Manitoba, de la Saskatchewan et de la Colombie-Britannique. L'indice des meubles a avancé de 1.3% en raison d'augmentations généralisées du prix de certains articles d'ameublement, et en particulier des matelas ainsi que des meubles de salles à manger et de salles de séjour. Le prix des appareils ménagers a augmenté, en moyenne, de 0.7% en raison d'une hausse du prix de plusieurs articles. Parmi les autres articles d'ameublement, on a enregistré une hausse du prix des rideaux, de la vaisselle et des ustensiles de cuisine. Le prix des fournitures de ménage a avancé, en moyenne, de 0.2%, principalement en raison de la hausse du prix des produits d'entretien ménager et des ampoules électriques. Au cours des douze derniers mois, l'indice de l'habitation a avancé de 6.7%.

L'indice de l'habillement est passé de 137.5 en mai à 138.1 en juin; cette augmentation de 0.4% est principalement attribuable à une hausse du prix des services vestimentaires et des vêtements pour hommes et enfants. Le prix des services vestimentaires a avancé de 2.5% en raison d'une hausse du prix demandé pour le blanchissage, le nettoyage à sec et la cordonnerie. La hausse de 0.4% de l'indice des vêtements pour hommes est attribuable à une augmentation du prix de nombreux articles y compris les complets, les chemises, les sous-vêtements et les bas. L'indice des vêtements pour enfants a également avancé de 0.4%; l'indice des vêtements pour femmes est resté stationnaire, l'augmentation du prix de certains articles ayant été annulée par la diminution du prix d'autres articles. Le prix des chaussures a augmenté, en moyenne, de 0.3% on a en effet enregistré diverses augmentations du prix de tous les articles observés. L'augmentation du prix des tissus synthétiques et des tissus en coton et en mélange de coton a fait avancer l'indice des tissus à la verge de 0.2%. De juin 1972 à juin 1973, l'indice de l'habillement a augmenté de 5.2%.

L'indice des transports est passé de 134.9 en mai à 136.1 en juin; cette augmentation de 0.9% est attribuable à une hausse des transports publics et privés. Pour ce qui est des transports privés, l'avance de 1.4% de l'indice des frais d'utilisation et d'entretien d'automobiles est principalement attribuable aux augmentations généralisées du prix de l'essence et de l'huile à moteur. Le prix des voitures neuves a augmenté de 0.3% principalement en raison de l'augmentation du prix des véhicules importés provenant de l'extérieur de l'Amérique du Nord. L'avance de l'élément "transports publics" est attribuable à une hausse de l'indice du prix des billets de train et par quelques augmentations du prix du transport interurbain par autobus. De juin 1972 à juin 1973, l'indice des transports a avancé de 1.9%.

En juin, l'indice des soins personnels et de l'hygiène est resté à son niveau de mai 156.3. Le prix des articles de toilette a, en moyenne, diminué; toutefois, cette baisse a été compensée par une augmentation du prix des coupes de cheveux pour hommes à Québec. Au cours des douze derniers mois, l'indice des soins personnels et de l'hygiène a avancé de 5.0%.

L'indice des loisirs, de la formation et de la lecture est passé de 143.8 en mai à 144.0 en juin; cette augmentation de 0.1% est attribuable au fait que la hausse des éléments "formation et lecture" a eu plus de poids que la baisse de l'élément "loisirs". L'avance de l'élément "lecture" est attribuable à une hausse du prix de certains magazines, et celle de l'élément "formation" dans

education elements, respectively. However, lower quotations for stereo combinations, television sets, boats and motors in a number of centres were the main cause of a decline in the recreation component. In the latest twelve months, the Recreation, Education and Reading index increased 3.4%.

The Tobacco and Alcohol index edged up 0.1% to 136.4 in June from 136.2 in May as the result of some price increases for liquor and wine for home consumption. In the latest twelve months, the Tobacco and Alcohol index rose 2.7%.

Consumer price movements, reclassified by goods and services, offer another view of the incidence of price change. Between May and June, the total goods index advanced 1.1%. Durable goods were 0.3% higher mainly as a result of increased prices for furniture, household appliances and equipment and new cars. Semi-durable goods also rose 0.3% chiefly because of increased prices for household furnishings and utensils and for clothing. A 1.5% advance in the non-durable goods component was mostly attributable to higher prices for food, gasoline, fuel oil, domestic supplies and alcoholic beverages. The services index rose 0.4% mainly in response to increased charges for shelter and clothing services, and driving lessons. Between June 1972 and June 1973, the total goods index advanced 8.8% and that for services 6.1%.

la plupart des grandes villes, à une augmentation du prix de pour les leçons de conduite. Par contre, la diminution du prix des meubles-stéréos, des téléviseurs, des embarcations et des motos dans bon nombre de villes a été le principal facteur de la diminution de l'élément "loisirs". Au cours des douze derniers mois, l'indice des loisirs, de la formation et de la lecture a augmenté de 3.4%.

L'indice des tabacs et alcools a augmenté de 0.1%, passant de 136.2 en mai à 136.4 en juin; cette légère hausse est attribuable à quelques augmentations du prix des spiritueux et du vin consommés à la maison. Au cours des douze derniers mois, l'indice des tabacs et alcools a avancé de 2.7%.

Le mouvement des prix à la consommation, reclassé en biens et services, présente un autre aspect de la variation des prix. Entre mai et juin, l'indice de l'ensemble des biens a augmenté de 1.1%. Les biens durables ont subi une hausse de 0.3% en raison principalement de l'augmentation du prix des meubles, des appareils et de l'équipement ménagers et des automobiles neuves. Les biens semi-durables ont également augmenté de 0.3% principalement en raison de l'augmentation du prix des articles d'ameublement et des articles ménagers ainsi que de l'habillement. L'augmentation de 1.5% des biens non durables est en majeure partie imputable à la hausse du prix des aliments, de l'essence, du mazout, des fournitures de ménage et des boissons alcooliques. L'indice des services a augmenté de 0.4% principalement en réponse à l'augmentation du coût du logement, des services vestimentaires et des leçons de conduite. De juin 1972 à juin 1973, l'indice de l'ensemble des biens a augmenté de 8.8% et celui des services, de 6.1%.

(5) Industry selling price index: manufacturing - Indice des prix de vente dans l'industrie: industries manufacturières.	1969	114.5	115.0	115.6	115.9	116.3	116.7	116.4	116.6	116.8	117.2	117.2	118.1	116.3
	1970	119.1	119.4	119.6	119.7	119.6	119.1	118.8	118.5	118.5	118.9	118.9	118.8	119.1
	1971	119.4	119.8	120.3	121.2	121.2	121.7	122.3	122.4	122.5	122.6	122.7	123.2	121.6
	1972	124.5	125.3	125.9	126.5	126.7	126.9	127.4	127.8	128.5	129.0	129.7	130.9	127.4
	1973	133.0	134.5	136.5	138.0	139.4	140.8							

(1) Indexes for 1972 and 1973 are subject to revision. - Les indices pour 1972 et 1973 sont sujets à révision.

(2) Effective January 1973 changes have been made in the calculation of this index. For details see page 88. - A compter de janvier 1973, on a modifié le calcul de cet indice. Pour plus de détails, voir la page 88.

(3) An extensive revision of the weight and price sample (including the incorporation of goods purchased and resold in same condition as purchased) necessitated by developments in the industry's production pattern since 1961 have resulted in the introduction of new price indexes and a discontinuity in the industry price index. - Une révision approfondie de l'échantillon des pondérations et des prix (y compris l'intégration des biens achetés et revendus sans aucune modification), nécessitée par l'évolution du régime de production de l'industrie depuis 1961, a amené l'adoption de nouveaux indices des prix ainsi qu'une solution de continuité dans l'indice des prix industriels.

	Old Series - Ancienne série	New series - Nouvelle série
December - 1970 - Décembre	95.1	92.3
January - 1971 - Janvier	95.1	92.1
Average - 1971 - Moyenne	95.2	91.8

(4) This series has been revised from January 1969 forward. An expanded list of establishments and commodities has been selected and prices for these have been aggregated to a total industry index using 1971 shipments data. The price quotations are, in general, of an improved quality. Selected commodity data on a 1971 time and weight base, are available on request. - Les chiffres de cette série ont été révisés à partir de janvier 1969. Une liste augment des établissements et des produits a été établie, et les prix de ces produits ont été agrégés pour former un total de l'activité économique à partir des données sur les livraisons de 1971. De manière générale, le calcul prix est plus fiable. Les utilisateurs peuvent obtenir sur demande des données sur certains produits utilisant les facteurs de pondération de 1971 et dont la période de référence est 1971.

(5) Gross weighted, including inter-industry shipments. For explanation see page 88. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 88.

ALL-ITEMS Consumer Price Index Converted to 1949=100 - June 1973 - L'indice des prix à la consommation de tous les éléments converti à 1949=100 - Juin 1973 ..... 193.4

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(1) Indexes prior to May 1973 incorporate 1957 expenditures weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Excludes accessories and notions. - Ne comprend pas les accessoires et menus articles.

(3) Includes clothing accessories and notions. - Comprend les accessoires et menus articles vestimentaires.

(4) Includes constant weighted food component. - Comprend l'élément aliments calculé à l'aide de pondérations constantes.

TABLE 11. Consumer Price Indexes, Regional Cities(1)

TABLEAU 11. Indices des prix à la consommation, agglomérations urbaines(1)

Note: (i) These indexes measure within each city the percentage change in consumer prices from the base period to the subsequent time periods. They cannot be used to compare levels of prices between cities. (ii) For inter-city indexes of retail price differentials refer to Table 14. - Nota: (i) Les indices mesurent dans chaque ville le pourcentage de variation des prix à la consommation depuis la période de base jusqu'à des périodes subséquentes. Ils ne peuvent servir à comparer les niveaux des prix d'une ville à l'autre. (ii) Pour les indices comparatifs des prix de détail, se reporter au Tableau 14.

(1) Indexes prior to May 1973 incorporate 1957 expenditure weights, those for May 1973 forward are based on 1967 expenditure. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1957; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(3) Includes shelter and household operation. Until April 1973, the shelter element of regional cities' housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes prior to May 1973 incorporate 1964 expenditure weights, those for May 1973 forward are based on 1967 expenditures. The revised series is linked to its predecessor at April 1973. For further explanation, see page 92. - Avant mai 1973 les indices étaient calculés à l'aide des pondérations fondées sur les dépenses de 1964; à partir de mai 1973 ils sont calculés à l'aide des pondérations fondées sur les dépenses de 1967. Les séries révisées sont raccordées aux précédentes en avril 1973. Pour plus de renseignements, voir page 92.

(2) Includes shelter and household operation. Until April 1973, the shelter element of regional cities housing indexes moved on the basis of changes in rents only. However, from May 1973 on, homeownership has been included in the shelter element of regional cities' housing indexes, so that the Canada and regional city shelter indexes now contain the same elements. See also page 93. - Comprend le logement et l'entretien du ménage. Jusqu'en avril 1973, l'élément logement des indices de l'habitation des agglomérations urbaines était basé uniquement sur les variations des loyers. Toutefois, depuis mai 1973, les frais de possession d'une maison ont été incorporés à l'élément logement des indices de l'habitation des agglomérations urbaines; il en résulte que les indices du logement pour le Canada et pour les agglomérations urbaines comportent maintenant les mêmes éléments. Voir aussi la page 93.

(1) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

(2) The Canada Index is the weighted average of the General Contractors and the Sub-trade Contractors Indexes as well as being the weighted average of the regional indexes. - L'indice pour le Canada est la moyenne pondérée des indices des entrepreneurs généraux et sous-traitants. Il correspond également à la moyenne pondérée des indices régionaux.

- (1,2) National Income and Expenditure Accounts, Catalogue 13-001, quarterly. - (No. 13-001 au catalogue, trimestriel).
- (2) This series contains an engineering component as well as a building component, and is therefore not precisely comparable in coverage with the non-residential composite index. The implicit price indexes are adjusted for changes in contractor profit and productivity. - Cette série comprend une composante génie aussi bien qu'une composante construction: elle n'a donc pas tout à fait la même portée que l'indice synthétique pour la construction non-résidentielle. Les indices synthétiques sont corrigés des variations des profits et de la productivité des entrepreneurs.
- (3) From Table 18. For explanation of recent revisions see Vol 1, No. 7 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 18. Pour une explication des récentes révisions voir Vol 1, No. 7 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (4) From Table 19. For explanation of recent revisions see Vol 1, No. 10 of Construction Price Statistics, Service Bulletin 62-006. - Du Tableau 19. Pour une explication des récentes révisions voir Vol 1, No. 10 du bulletin de service "Statistique des prix dans la construction" 62-006.
- (5) Indexes for current year are subject to revision. - Les données de l'année courante sont sujettes à révision.

(1) To assist comparison with other published series the indexes presented have been arithmetically converted from 1956=100 to 1961=100. The 1956=100 indexes are available on request. - Pour faciliter la comparaison avec d'autres séries publiées, ces indices ont été recalculés sur la base 1961=100. Les indices originaux (1956=100) sont disponibles.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières; par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) Major components for the provincial indexes are presented annually in *Construction Price Statistics*, Service Bulletin No. 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, *Statistiques des Prix dans la Construction*, no 62-006.

(4) Direct comparisons should not be made between this index and the highway index published by the Ontario Department of Transportation & Communications. The item content of the indexes is different. - On ne peut comparer directement cet indice avec celui de la voirie publié par le Département du transport et des communications de l'Ontario. Les éléments des deux indices sont différents.

(1) Major components for the provincial indexes are presented annually in Construction Price Statistics, Service bulletin, 62-006. - Les principaux éléments des indices pour les provinces sont publiés annuellement dans le bulletin de service, Statistiques des prix dans la construction, no 62-006 au catalogue.

(2) The years refer to fiscal years. Thus 1961 refers to the period April 1, 1961 to March 31, 1962. - Années financières, par exemple, 1961 couvre la période du 1er avril 1961 au 31 mars 1962.

(3) For further detailed explanation see occasional paper 62-526. - Pour plus de renseignements, voir le bulletin hors série No 62-526 au catalogue.

(4) For further detailed explanation see occasional paper 62-533. - Pour plus de renseignements, voir le bulletin hors série No 62-533 au catalogue.

## Explanation of Methods Used and Additional Sources for Price Series

### Industrial Price Indexes

#### Industry Selling Price Indexes (1961 = 100)

Industry selling price indexes are published for approximately 100 industries within manufacturing. Also published are approximately 425 commodity price indexes for the products of these industries. The Classification system is that of the 1960 standard industrial classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected on the 15th of each month or the nearest transaction date for the commodity being priced; sales and excise taxes are excluded.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes 1956-68, Catalogue No. 62-528.

#### Industry Selling Price Index: Manufacturing

The index is gross weighted. It measures the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, it duplicates the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

#### "Iron & Steel Mills:" 12-2910

The principal change in the index is as follows: From January 1973 forward prices collected from the various companies are, for any given commodity, weighted together in a way that reflects the relative importance of each company's shipments of the commodity to the total shipments of that commodity by all companies in the year 1971. In addition prices for stainless products were deleted from the series bars hot rolled etc. (12-2910-082), in September 1972 and from the series sheets and strip cold rolled etc. (12-2910-084) in October 1972. Prices for stainless products, however, are included in the price index for the iron and steel mills industry.

## Explication des méthodes utilisées et sources supplémentaires des séries de prix

### Indices des prix industriels

#### Indices des prix de vente dans l'industrie (1961 = 100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 100 industries manufacturières. Près de 425 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification type des industries de 1960, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial de produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles on recueille des statistiques sur les expéditions de produits, sur l'emploi et sur les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices est donnée dans "Indices des prix de vente dans l'industrie, 1956-68", n° 62-528 au catalogue.

#### Indices des prix de vente dans l'industrie: Industries manufacturières

Il s'agit d'un indice pondéré brut. Il mesure les mouvements du prix des livraisons brutes des industries manufacturières y compris les livraisons inter-industrielles des industries manufacturières. Il prend donc deux fois en compte les mouvements de certains prix: les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons de meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient de leurs produits, tels que le pain, les biscuits ou les gâteaux.

#### "Sidérurgie:" 12-2910

Le principal changement apporté à l'indice est le suivant: depuis janvier 1973, les prix recueillis auprès des différentes sociétés sont, pour tout produit, pondérés de manière à refléter l'importance relative des livraisons de chaque société par rapport aux livraisons totales de ce produit par toutes les sociétés en 1971. En outre, les prix des produits en acier inoxydable ont été enlevés de la série "barres, laminés à chaud, etc." (12-2910-082) en septembre 1972 et de la série "tôles et feuillards, laminés à froid, etc." (12-2910-084) en octobre 1972. Ils sont toutefois compris dans l'indice des prix de l'industrie de la sidérurgie.

The concept of price change measured is net return to mill.

Le concept de la mesure de la variation des prix se fonde sur le revenu net à l'usine.

### Purchase Price Indexes of Secondary Metals (1969=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

### Indices du prix d'achat des métaux de deuxième fusion (1969=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

### Canadian Farm Products Price Index (1935-39=100)

Prices of Western wheat used in the index prior to August 1972, are buying prices of the Canadian Wheat Board for Nos. 1, 2 and 3 Northern at Thunder Bay. From August 1, 1972 forward, prices used are for Nos. 1 and 2 C.W. Red Spring 14% at Thunder Bay. Prices for western oats and barley are also supplied by the Wheat Board. Initial payments are first used in the index calculation and are revised as further payments are announced.

### Indice des prix des produits agricoles canadiens (1935-39=100)

Les prix du blé canadien sur lesquels étaient basés le calcul de l'indice avant le mois d'août 1972 étaient les prix payés par la Commission canadienne du blé pour le blé nos 1, 2 et 3 du Nord à Thunder Bay. A compter du 1er août 1972, les prix utilisés sont ceux du blé rouge de printemps, nos 1 et 2 (14%) à Thunder Bay. Pour calculer l'indice, on se sert d'abord des premiers paiements et on les rectifie à mesure que d'autres paiements sont annoncés.

Final payments for the crop year August 1971 - July 1972 were announced on February 13, 1973 for wheat and oats. No final payment was granted for barley.

Les prix définitifs pour la campagne allant d'août 1971 à juillet 1972 ont été annoncés le 13 février 1973, en ce qui concerne le blé et l'avoine. Il n'y a pas eu de dernier paiement pour l'orge.

Incorporated retroactively in revised final indexes Aug. 1971 to July 1972. - Inclus rétroactivement dans les indices finals révisés d'août 1971 à juillet 1972.

Used in Indexes Aug. 1972 to July 1973. - Utilisé dans les indices d'août 1972 jusqu'en juillet 1973.

### General Wholesale Index (1935-39 = 100)

The General Wholesale Index is a commodity classified index of prices. The index is "general" inasmuch as it incorporates a diverse selection of both primary and processed commodities. It is called "wholesale" because its ingredient prices relate to that broad and heterogeneous area of commodity distribution which excludes only retail trade. In fact, the term "wholesale" has more of a connotation of bulk trading than of any homogeneous level of distribution. Thus, though the index mainly includes prices of producers, it also covers transactions of "middle men" who trade in commodities of a type or in quantities characteristic of primary marketing functions.

Though general wholesale price indexes have been calculated by many countries for years there is no precise answer to the question of what such an index measures. This is so because the index cannot be associated with any adequately definable value aggregate. Unlike a consumer price index which can be identified with expenditures of household consumers, a general wholesale index covers a host of overlapping transactions sometimes involving the same ingredient in as many as three different stages of processing. Yet, conceptually, it is not a measure of the purchasing power of money because it omits significant areas of monetary transactions such as prices of land, labour, securities and services, except in so far as prices of these things are implicit in commodity prices. As a conventional summary figure, its use has tended towards a reference level against which to observe the behaviour of particular price groups such as farm products, industrial materials, building materials and the various other groupings for which indexes are published. And as an indicator of general business conditions it is usually included in the group which is regarded as approximately coincident with the business cycle. However, its main attribute now lies in its long historical continuity.

For further details about the General Wholesale Index please consult: *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) *Prices and Price Indexes 1949-52* (Vol. 23) (Catalogue No. 62-501).

### Thirty Industrial Materials, (1935-39 = 100)

The price index of thirty industrial materials is calculated as an unweighted geometric average of prices of the selected commodities. The formula is as follows:

$$\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}$$

---

$$\sqrt[30]{P_{t\ 35-39}^1 \times P_{t\ 35-39}^2 \times P_{t\ 35-39}^3 \times \dots \times P_{t\ 35-39}^{30}}$$

### Indice général des prix de gros (1935-39 = 100)

L'indice général des prix de gros est un indice des prix classés par produit. Cet indice est "général" du fait qu'il comprend une variété de produits primaires et de produits transformés. Il est appelé "de gros" parce que les prix qui le composent se rapportent au domaine vaste et hétérogène de la distribution des produits dont seul le commerce de détail est exclu. En réalité, l'expression "de gros" fait penser plus au commerce de gros qu'à un niveau homogène de distribution. Bien que l'indice comprenne surtout les prix établis par les producteurs, il englobe également les transactions des "intermédiaires" qui vendent des produits dont le genre et la qualité sont particuliers aux fonctions premières de la commercialisation.

De nombreux pays calculent l'indice général des prix de gros depuis des années; il n'en reste pas moins impossible de définir exactement ce que cet indice mesure, car on ne peut l'associer à une valeur globale que l'on puisse définir exactement. Contrairement à l'indice des prix à la consommation que l'on peut identifier grâce aux dépenses des ménages, l'indice général des prix de gros couvre une foule de transactions à double emploi impliquant parfois le même élément considéré jusqu'à trois étapes différentes de la transformation. Cependant, du point de vue conceptuel, l'indice ne constitue pas une mesure du pouvoir d'achat du dollar parce qu'il ne tient pas compte de transactions monétaires aussi importantes que le prix du terrain, du travail, des valeurs mobilières et des services, sauf si elles sont comprises dans le prix des produits. En tant que chiffre représentatif classique, on a tendance à s'en servir pour comparer le comportement de certains groupes de prix, par exemple, celui des produits agricoles, des matières industrielles, des matériaux de construction et de divers autres groupes pour lesquels on publie des indices. Comme indicateur de la situation générale du commerce, l'indice est habituellement intégré au groupe dont on considère qu'il correspond le plus exactement au cycle commercial. Sa qualité principale réside cependant dans sa longue continuité chronologique.

Pour plus de détails sur l'indice général des prix de gros consulter *Wholesale Price Indexes 1913-50* (Reference Paper No. 24) et *Prices and Price Indexes 1949-52* (Vol. 23) (no 62-501 catalogue).

### Indice des prix de trente matières industrielles (1935-39 = 100)

L'Indice des prix de trente matières industrielles est calculé comme moyenne géométrique non pondérée des prix de certaines marchandises. La formule est la suivante:

$$\sqrt[30]{P_{tN}^1 \times P_{tN}^2 \times P_{tN}^3 \times \dots \times P_{tN}^{30}}$$

---

$$\sqrt[30]{P_{t\ 35-39}^1 \times P_{t\ 35-39}^2 \times P_{t\ 35-39}^3 \times \dots \times P_{t\ 35-39}^{30}}$$

The selection of materials for pricing relates to groups such as "stable" prices, numbering 12, food prices, numbering 5 and "sensitive" prices, numbering 13. We plan to construct an index of industrial prices that will relate to current usage of materials and that will be of the more traditional Laspeyre's type in its construction. The presently published index contains prices for some materials that no longer constitute important industrial inputs.

Le choix des matières servant au prélèvement des prix et se rapportant à des groupes tels que prix "stables", (12 matières), prix des aliments (5 matières) et prix "variables" (13 matières). Nous projetons d'établir un indice des prix industriels qui se rapportera à l'utilisation courante des matières et dont la structure se rapprochera plus du type Laspeyres plus traditionnel. L'indice publié ici renferme les prix de certaines matières qui ne sont plus considérées comme intrants importants dans l'industrie.

## RETAIL PRICE INDEXES

### The Consumer Price Index for Canada (1961=100)

The Consumer Price Index measures the percentage change through time in the cost of purchasing a constant "basket" of goods and services representing the purchases by a particular population group in a specified time period. The "basket" is an unchanging or equivalent quantity and quality of goods and services, consisting of items for which there is a continually measurable market price over time.

The index relates to a broad but specific group of urban families and reflects the price changes experienced by that "target group". The index may not represent closely the experience of any one specific family within the group, nor should it be expected to reflect price change for other population groups for which income, family size and place of residence are characteristically different. The target group to which the current index relates is composed of families — (a) living in cities with over 30,000 population, (b) ranging in size from two to six persons and (c) with annual incomes in 1967 ranging from \$4,000 to \$12,000. To measure the influences of price change on the cost of goods and services purchased by such families, the Consumer Price Index reflects movements of some 300 items.

The history of consumer price indexes in Canada extends back to the early 1900's and encompasses periodic revisions of index base reference periods and weighting patterns. In January 1969, the time base was updated to 1961=100 from 1949=100; details are contained in the January 1969 issue of the monthly publication *Prices and Price Indexes*, Catalogue 62-002.

From March 1961 to April 1973 inclusive, the weights or relative importance of the items in the Consumer Price Index were based on 1957 family expenditure patterns; details of these weights can be found in *The Consumer Price Index for Canada (1949=100) (Revision Based on 1957 Expenditures)*, Catalogue 62-518. A subsequent weight revision to reflect 1967 family expenditure patterns (and within the food component, 1969 detailed spending habits) was introduced in May 1973. Full details of the latest weighting pattern and other background information on the Consumer Price Index is available in the occasional paper *The Consumer Price Index for Canada (1961=100) (Revision Based on 1967 Expenditures)*, Catalogue 62-539.

### The Consumer Price Index for Canada Reclassified by Goods and Services

A revised supplementary classification system, entitled "The Consumer Price Index Reclassified by Goods and Services", was introduced in May 1973 with the revision of the weighting pattern of the Consumer Price Index to reflect 1967 expenditures.

This supplementary classification introduces an improved framework for regrouping the items which comprise

## INDICES DES PRIX DE DETAIL

### L'indice des prix à la consommation pour le Canada (1961=100)

L'indice des prix à la consommation mesure le taux de variation dans le temps du coût à l'achat d'un "panier" constant de biens et de services représentant les achats d'un groupe déterminé de la population au cours d'une période donnée. Le "panier" est constitué par des biens et des services en quantité de qualité constantes; il comprend uniquement les biens et services qui ont un prix et dont les prix peuvent être observés de façon continue.

L'indice se rapporte à un groupe vaste, mais délimité, de familles urbaines et rend compte des changements de prix auxquels ce "groupe cible" doit faire face. L'indice peut ne pas suivre de près les changements de prix touchant une famille en particulier de ce groupe, pas plus que les changements de prix touchant d'autres groupes de la population dont le revenu, la taille des familles ou les lieux de résidence diffèrent sensiblement. Le groupe cible auquel se rapporte l'indice actuel se compose de familles vivant dans des villes de plus de 30,000 habitants, b) dont la taille est comprise entre deux et six personnes, et c) dont les revenus annuels en 1967 étaient compris entre \$4,000 et \$12,000. Afin de mesurer les effets de changements de prix sur le coût des biens et des services achetés par ces familles, l'indice des prix à la consommation suit les mouvements de quelque 300 articles.

L'histoire des indices de prix à la consommation au Canada remonte au début des années 1900, et elle comprend des révisions périodiques des périodes de référence de base de l'indice ainsi que des schémas de pondération. En janvier 1969, on a aligné la base de temps de 1949=100 à 1961=100; d'autres renseignements figurent dans l'édition de janvier 1969 de la publication mensuelle *Prix et indices des prix* (numéro 62-002 au catalogue).

De mars 1961 à avril 1973 inclusivement, les poids, l'importance relative des éléments de l'indice des prix à la consommation étaient basés sur les tendances de dépense des familles pour 1957; on peut trouver le détail de ces poids dans la publication *The Consumer Price Index for Canada (1949=100) (Revision based on 1957 Expenditure)*, numéro 62-518 au catalogue. En mai 1973, on a introduit une nouvelle révision des poids afin de prendre en compte les tendances de consommation des familles en 1967 (et, dans l'élément aliments, les habitudes détaillées de dépense en 1969). Le détail complet du dernier schéma de pondération et d'autres renseignements fondamentaux sur l'indice des prix à la consommation figurent dans la publication hors série *L'indice des prix à la consommation du Canada (1961=100) (Révision fondée sur les dépenses de 1967)*, numéro 62-539 au catalogue.

### L'indice des prix à la consommation au Canada reclassé par biens et services

Un système révisé de classification supplémentaire, intitulé "L'indice des prix à la consommation au Canada reclassé par biens et services", a été introduit en mai 1973 en même temps que la révision des schémas de pondération de l'indice des prix à la consommation afin de rendre compte des dépenses de 1967.

Cette classification supplémentaire regroupe dans un cadre amélioré les éléments de l'indice. En effet, tous les éléments

e Index. In it, all items in the C.P.I. have been reclassified to two major categories — goods and services — according to their most characteristic or dominant attribute. The goods component has been sub-divided into three categories: durable, semi-durable, and non-durable goods, according to expected average useful lifetime criteria. Services, on the other hand, have been sub-divided according to broad functional categories.

Historical series conforming to the revised classification system replace the previously published supplementary indexes and are available, with explanatory notes, for the period January 1961 to April 1973 inclusive, in *Retail Prices and Living Costs Service Bulletin*, Catalogue 62-005, Vol. 2 no. 7.

#### Consumer Price Indexes for Regional Cities (1961 = 100)

Consumer Price Indexes for Regional Cities are published monthly in this bulletin (Table 11). Except for their individual weighting systems, and the fact that they are based on fewer quotations, the regional city indexes are generally similar in concept and item coverage to the Consumer Price Index for Canada.

Prior to May 1973, the city indexes may have underestimated the degree of price movements occurring because the shelter component of the city indexes moved on the basis of changes in rents only, whereas changes in both rents and homeownership costs were, and continue to be, included in the Canada index. As a result of homeownership costs having increased more rapidly than rents, the housing and the items indexes for cities tended to underestimate somewhat the rates of price increase particularly over longer periods. From May 1973 forward, however, homeownership costs are included in the regional city consumer price indexes so that the Canada and the regional city indexes are consistent in terms of their content and treatment.

Each city index is designed to measure the influence of changes in retail prices taking place in the locality specified, upon the cost of a fixed basket of goods and services representing the level of consumption of a representative group of families in the particular area specified.

In using the city indexes, it should be remembered that *they do not in any way indicate whether price levels are higher or lower in one city than in another*. Rather, they measure, *within each city*, the percentage change in consumer prices from the base period to subsequent time periods.

For comparisons of retail price differentials between cities, see Table 14 of this publication and the relevant explanatory notes.

#### Purchasing Power of the 1961 Consumer Dollar

As consumer prices rise, the sum of money required to purchase an unchanging or equivalent quantity and quality of goods and services increases, and the amount of these items that can be purchased with a fixed sum of money decreases. Conversely, as prices fall, the amount of goods and services

l'I.P.C. ont été reclassés dans deux grandes catégories, soit la catégorie des biens et celle des services, suivant leur caractère le plus distinctif ou dominant. La catégorie des biens présente trois sous-catégories (biens durables, biens semi-durables, biens non durables) déterminées en fonction de la vie utile moyenne prévisible. D'autre part, on a réparti les services suivant quelques grandes catégories fonctionnelles.

Les séries historiques conformes au système révisé de classification remplacent les indices supplémentaires publiés auparavant, et on peut les trouver, avec des notes explicatives, pour la période janvier 1961-avril 1973, dans la publication "Prix de détail et coût de la vie" - Bulletin de service, numéro 62-005 au catalogue, vol. 2 no 7.

#### Indices des prix de la consommation dans certaines agglomérations urbaines (1961 = 100)

Ces indices sont publiés tous les mois dans la présente publication (Tableau 11). À l'exception de leurs systèmes de pondération particuliers, et de ce qu'ils font appel à moins de prix, ces indices sont en général semblables par leur concept et par les éléments qui les composent à l'indice des prix à la consommation au Canada.

Avant mai 1973, les indices des agglomérations ont pu sous-estimer le degré de changement des prix, parce que l'élément logement des indices des agglomérations ne variait qu'en fonction de l'évolution des loyers, tandis que l'indice pour le Canada ne comprenait et ne comprend toujours que les changements des loyers et les coûts de propriété. Comme les coûts de propriété ont augmenté plus vite que les loyers, les indices du logement et l'ensemble pour les villes tendent à sous-estimer quelque peu les taux de croissance des prix, principalement sur des périodes plus longues. À partir de mai 1973, cependant, les coûts de propriété sont inclus dans les indices de prix à la consommation des agglomérations urbaines, de sorte que les indices pour le Canada et les agglomérations urbaines sont homogènes à la fois pour ce qui est de leur contenu et de leur traitement.

Chaque indice de ville est conçu de manière à mesurer l'effet des changements des prix de détail dans la ville en question sur les prix d'un panier constant de biens et de services représentant le niveau de consommation d'un groupe représentatif de familles dans cette ville.

Le lecteur devra toujours garder en mémoire que ces indices *n'indiquent en aucune façon si les prix sont plus élevés dans une ville que dans une autre*. Ils mesurent plutôt *dans chaque ville* le taux de variation des prix à la consommation à partir de la période de base et des périodes subséquentes.

Pour étudier les différences de prix de détail entre les villes, il faut consulter le tableau 14 de la présente publication et les notes explicatives qui l'accompagnent.

#### Pouvoir d'achat du dollar de consommation 1961

À mesure que les prix à la consommation montent, la somme nécessaire à l'achat d'une quantité et d'une qualité constantes ou équivalentes de biens et de services augmente, et la quantité de ces articles qui peut être achetée avec une somme d'argent fixe diminue. Inversement, à mesure que les prix baissent,

that can be purchased with a fixed sum of money increases. Thus, rising prices are associated with declining purchasing power of money and falling prices are associated with its increasing purchasing power.

The purchasing power of the consumer dollar, in other words, bears an inverse relationship to the movement of the Consumer Price Index. For example, by January 1973, compared with their average level in 1961, consumer prices as measured by the C.P.I. were 44.5% higher, so that an equivalent basket of goods and services which could be purchased for \$100.00 in 1961 would cost the consumer \$144.50 in January 1973. Each consumer dollar in January 1973, therefore, buys less than in 1961, and the amount of its reduced value can be expressed in terms of the inverse consumer price movement. Thus, in January 1973 the purchasing power of the 1961 consumer dollar declined to approximately 69 cents ( $\$1.00 \times 100.0/144.5 = \$0.69$ ).

Users of the tabulation which shows the purchasing power of the 1961 consumer dollar at different points in time (Table 12) should note that, as in the case of the Consumer Price Index from which it is derived, it may not represent closely the experience of any one specific family within the large group to which the C.P.I. relates; nor should it be expected to reflect the experience of other population groups whose income, family size and place of residence are characteristically different. It should also be noted that, like the C.P.I., it is not directly affected by changes in income tax, unemployment insurance premiums and certain other security payments.

### Measuring the Purchasing Power of Wages

Changing consumer price levels affect the amounts of consumer goods and services which a dollar will buy, and average wages, insofar as they are spent on such items will, of course, be affected in the same way. A wage measurement which takes the change of consumer prices into account, can be calculated by reducing actual average wages by the percentage rise in consumer price levels, or increasing them by the amount price levels fall. Wages thus adjusted may be used to indicate the comparative purchasing power of average earnings if consumer price levels and consumption patterns had remained constant. The following illustration shows how this kind of an adjustment can be made.

Suppose that a series of average weekly wages rises from \$80.00 in week A to \$100.00 in week B, and that in the same interval a consumer price index advances from 100 to 110.0. Because of the 10% rise in consumer prices, \$1.00 will not buy as much in week B as it would in week A. On the other hand, the 25% rise from \$80.00 to \$100.00 will overstate the increase which has occurred in the purchasing power of average weekly wages. This overstatement can be removed by reducing the figure of \$100.00 by the amount of the consumer price index increase. The adjusted average is  $\$90.91((100.0/110.0) \times \$100)$ , which may be referred to as a weekly wage average for week B expressed in the dollars of period A; or it may be said to indicate the level of real weekly wages relative to week A.

la quantité de biens et de services qui peut être achetée avec une somme d'argent constante augmente. Ainsi, la hausse des prix est liée à la baisse du pouvoir d'achat de la monnaie, et la baisse des prix est liée à la hausse du pouvoir d'achat.

Le pouvoir d'achat du dollar de consommation, en d'autres termes, évolue en raison inverse du mouvement de l'indice des prix à la consommation. Ainsi, en janvier 1973, par rapport au niveau de 1961, les prix à la consommation mesurés par l'I.P.C. avaient progressé de 44.5%, de sorte qu'un panier équivalent de biens et de services qui coûtait \$100 à l'achat en 1961 aurait coûté \$144.50 en janvier 1973 au consommateur. Par conséquent, chaque dollar de consommation en janvier 1973 achète moins qu'en 1961, et l'on peut exprimer le montant de sa valeur réduite en fonction de l'inverse du mouvement des prix à la consommation. Ainsi, en janvier 1973, le pouvoir d'achat du dollar de consommation 1961 était tombé approximativement à 69 cents ( $\$1.00 \times 100.0/144.5 = \$0.69$ ).

Les utilisateurs du tableau qui indique le pouvoir d'achat du dollar de consommation de 1961 à différentes périodes (tableau 12) doivent noter que, comme dans le cas de l'indice des prix à la consommation dont il a été tiré, il peut ne pas suivre de près le cas d'une famille en particulier faisant partie du grand groupe auquel se rapporte l'I.P.C., pas plus qu'il ne rend nécessairement compte des dépenses d'autres groupes de la population dont les revenus, la taille des familles et les lieux de résidence diffèrent sensiblement. Il faut également noter que, tout comme l'I.P.C., in n'est pas touché directement par les changements de l'impôt sur le revenu, les primes d'assurance-chômage et certains autres paiements d'assistance.

### Mesure du pouvoir d'achat des salaires

Les changements du niveau des prix à la consommation affectent les quantités de biens et de services de consommation qu'un dollar peut acheter, et les salaires moyens, dans la mesure où ils sont consacrés à de tels articles, seront naturellement touchés de la même façon. Une mesure des salaires qui prendrait en compte les changements de prix à la consommation peut se calculer en réduisant les salaires moyens réels du taux d'accroissement des prix à la consommation, ou en les augmentant dans une proportion égale à la baisse des prix. Les salaires ainsi ajustés peuvent servir à indiquer le pouvoir d'achat comparatif des gains moyens si les prix à la consommation et les tendances de consommation étaient restés constants. L'exemple suivant montre comment on peut procéder à un ajustement de cette nature.

Supposons qu'une série de salaires hebdomadaires moyens passe de \$80 pendant la semaine A à \$100 au cours de la semaine B, et qu'au cours de la même période un indice des prix à la consommation passe de 100 à 110. Par suite de la hausse de 10% des prix à la consommation, \$1 n'achètera pas autant au cours de la semaine B qu'au cours de la semaine A. Par contre, la hausse de 25% (de \$80 à \$100) va surévaluer la hausse qui s'est produite dans le pouvoir d'achat des salaires hebdomadaires moyens. Cette surévaluation peut être réduite en réduisant le chiffre de \$100 du montant de l'accroissement de l'indice des prix à la consommation. La moyenne ajustée sera  $\$90.91((100.0/110.0) \times \$100)$ , et que l'on peut désigner comme étant la moyenne du salaire hebdomadaire pour la semaine B exprimée en dollars de la période A; on peut aussi dire qu'elle indique le niveau réel des salaires par rapport à la semaine A.

The foregoing calculation can be carried a step further to express, in index number form, the relationship between the week A average of \$80.00 and the week B adjusted figure of \$90.91. Assuming the week A average of \$80.00 as an index equal to 100, the week B index becomes 113.6  $((90.91/80.00) \times 100)$ . Such an index may be called an index of average weekly real wages. It indicates that average wages for week B will buy 13.6% more goods and services than they did in week A, in spite of a 10% rise in consumer prices. This 13.6% increase in real wages compares with the 5% rise in money wages  $((\$100.00-\$80.00/\$80.00) \times 100)$ .

In Table 13, the index numbers of average weekly wages in manufacturing in current dollar terms (1961 = 100) are calculated by dividing the weekly wages in current dollars by the 1961 average weekly wage in current dollars and multiplying the result by one hundred. For example, the weekly wage index for September 1972 in current dollars (1961 = 100) is 196.4  $((146.23/74.45) \times 100)$ . The weekly wages in 1961 dollar terms are determined by dividing the weekly wage in current dollars by the consumer price index for Canada for the month following the month to which the wages relate and multiplying the result by one hundred. Thus, the September 1972 weekly wage in 1961 dollars is \$102.98  $((146.23/142.0) \times 100)$ . (The wage and the price data both refer to generally similar time periods: current wages for a particular month relate to the last pay periods in that month, while most prices for the consumer price index of the following month are collected in the first week of that month.)

The index numbers of weekly wages in 1961 dollar terms (1961 = 100) are determined by dividing the weekly wages in 1961 dollars by the base (1961) average weekly wage and multiplying the result by one hundred. For example, the September 1972 weekly wage index in 1961 dollar terms (1961 = 100) is 138.3  $((102.98/74.45) \times 100)$ .

It should be noted that while the estimates of average real wages may reflect the experiences of broad groups of workers in manufacturing fairly well, their applicability to individual wage-earners depends upon a number of considerations. For example, individual earnings will differ significantly from the group average, depending upon occupation, industry, geographical location, or sex of the wage-earner. Moreover, individual spending habits differ widely, but the consumer price index which is used to adjust the earnings data refers only to the average consumption pattern of a particular population group. Group spending patterns change over periods of time. To the extent that this occurs, the wage data adjusted by the consumer price index (which has a "fixed" consumption pattern), will gradually be rendered less valid; the consumer price index weighting pattern was last revised in May 1973, and prior to that, in 1961. Furthermore, some part of income may be saved, and it should be borne in mind that it is not appropriate to reduce savings to a constant dollar basis by using an index which reflects consumption patterns.

It should also be kept in mind that measures of change in real earnings calculated from averages of gross earnings may differ from changes in the purchasing power of

On peut pousser ce calcul plus loin, en exprimant à l'aide d'un indice, la relation entre le salaire moyen de \$80 de la semaine A, et le salaire révisé de \$90.91 de la semaine B. En supposant que la moyenne de la semaine A soit un indice égal à 100, l'indice de la semaine B devient 113.6  $((90.91/80.00) \times 100)$ . On pourrait appeler un tel indice l'indice de la rémunération hebdomadaire effective. Il indique que le salaire moyen pour la semaine B permettra aux consommateurs d'acheter pour 13.6% de plus en biens et services que pendant la semaine A, et ceci, en dépit de l'augmentation de 10% des prix à la consommation. Cette augmentation effective de 13.6% se compare à l'augmentation de 25% des salaires  $((\$100.00-\$80.00/\$80.00) \times 100)$ .

Au Tableau 13, les nombres indices des salaires hebdomadaires moyens dans les industries manufacturières en dollars courants (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars courants par le salaire hebdomadaire moyen de 1961 en dollars courants et en multipliant le résultat par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972 exprimés en dollars courants (1961 = 100) est 196.4  $((146.23/74.45) \times 100)$ . Les salaires hebdomadaires en dollars de 1961 s'obtiennent en divisant les salaires hebdomadaires en dollars courants par l'indice des prix à la consommation pour le Canada pour le mois qui suit celui auquel se rapportent les salaires, et en multipliant le quotient par cent. Ainsi, le salaire hebdomadaire de septembre 1972 exprimé en dollars de 1961 est \$102.98  $((146.23/142.0) \times 100)$ . (Les données sur les salaires et les prix portent en général sur des périodes semblables: les salaires courants d'un mois donné sont généralement ceux des dernières périodes de paie du mois, alors que la plupart des prix pour l'indice des prix à la consommation du mois suivant sont recueillis au cours de la première semaine de ce mois.)

Les nombres indices des salaires hebdomadaires en dollars de 1961 (1961 = 100) s'obtiennent en divisant les salaires hebdomadaires en dollars de 1961 par les salaires hebdomadaires moyens de l'année de base (1961) et en multipliant le quotient par cent. Ainsi, l'indice des salaires hebdomadaires pour septembre 1972, exprimés en dollars de 1961 (1961 = 100), sera 138.3  $((102.98/74.45) \times 100)$ .

Il convient de souligner que, même si les estimations des salaires réels moyens résument assez bien la situation d'un large éventail de travailleurs dans les industries manufacturières, elles ne peuvent être appliquées aux individus sans quelques précautions. Ainsi, le revenu d'un salarié s'écartera sensiblement de la moyenne du groupe en fonction de sa profession, de l'industrie dans laquelle il travaille, de sa situation géographique ou de son sexe. De plus, les habitudes de consommation varient considérablement d'un individu à l'autre, alors que l'indice des prix à la consommation qui sert à redresser les données sur les gains porte uniquement sur la structure moyenne de consommation d'un groupe déterminé. De même, les habitudes de consommation changent avec le temps. Ainsi, les données sur les gains rajustées par l'indice des prix à la consommation (les habitudes de consommation étant supposées "fixes") perdront graduellement de leur valeur; le schéma de pondération de l'indice des prix à la consommation a été révisé pour la dernière fois en mai 1973, et avant cela, en 1961. De plus, il ne faut pas oublier qu'une partie du revenu peut être épargnée et qu'il serait faux de recalculer cette épargne en dollars constants à partir d'un indice qui se rapporte à des habitudes de consommation.

De même, il faut se rappeler que l'évaluation des variations des gains effectifs calculées à partir de moyennes effectives peut différer de l'évaluation des variations du pouvoir d'achat du

"take-home" pay, due to such factors as changes in personal income tax and pay deductions for such things as social insurance and pension plans. Thus index numbers of real wages should not be interpreted as measuring fluctuations in the levels of consumption of wage-earners or wage-earners' families; they are intended to show only the trend in purchasing power of wages over the items covered by the price index, and in addition to the factors already mentioned, do not take into account other family income (including family allowances) or changes in the savings position of families.

The table in this report showing indexes of both actual (current dollar) and real (constant dollar) wages uses 1961 as a reference year. However, any reference period may be chosen as a base since percentage changes between any two periods will be the same regardless of the reference period selected.

Further information regarding Table 13 can be obtained from: Labour Division, Statistics Canada.

### Inter-City Retail Price Comparisons

Statistics relating to differences in retail prices between Canadian cities were initially developed for food, and subsequently extended to cover such other elements of the family budget as clothing, transportation, household operation, health and personal care, recreation, education and reading, and tobacco and alcohol. In all, inter-city price comparisons are drawn for commodities and services comprising nearly three-quarters of the budget on which the Consumer Price Index for Canada is currently based with the major omission being shelter (both rented and owned). While recognizing the importance of shelter differentials in any overall comparison of the general price level being encountered by consumers in different urban centres, the problems inherent in drawing valid comparisons between cities are such as to require further research. Meanwhile, it is considered that, despite the absence of shelter differentials at this time, publication of retail price comparisons for other elements of the budget will go some distance towards serving the varied needs of users.

Table 14 presents the results of an updating of earlier spatial retail price measurements to May 1971 and includes more complete data on several cities. A fuller explanation of the study from which this table is derived is contained in the November 1968, November 1969 and April 1972 issues of *Prices and Price Indexes* (Statistics Canada, Catalogue Number 62-002).

The original data base of this study was the wide range of retail price quotations collected in the course of production of the national and urban Consumer Price Indexes. In developing these spatial price comparisons, efforts were made to achieve comparability by equating qualities of goods and services and by matching types of retail outlets, as far as possible. Price relationships between pairs of cities were derived and subsequently converted to a common base of Winnipeg prices equalling 100 to facilitate comparisons over the whole range of cities. Except for foodstuffs and new passenger cars for which inter-city price differentials were derived directly from new comparisons based on May 1971

revenu disponible en raison de facteurs tels que l'évolution de l'impôt sur le revenu des particuliers et des retenues destinées à l'assurance sociale, aux régimes de pensions, etc. Ainsi, l'indice de la rémunération effective ne sert pas à mesurer les variations des niveaux de consommation des salariés ou de leurs familles, mais plutôt à montrer les tendances du pouvoir d'achat des salariés par rapport aux articles contenus dans l'indice; enfin, l'indice ne prend pas en compte les autres revenus des familles (tels que les allocations familiales) ou les variations de l'épargne de familles.

La période de référence du tableau qui présente les salaires tant réels (en dollars courants) qu'effectifs (en dollars constants) prend pour base l'année 1961. En fait, on peut choisir n'importe quelle période de référence comme base, puisque les taux de variation entre deux périodes seront les mêmes quelle que soit la période de référence choisie.

On peut obtenir plus de renseignements sur le tableau 13 en s'adressant à la Division du travail, Statistique Canada.

### Comparaisons entre les prix de détail d'une ville à l'autre

À l'origine, la statistique des différences entre les prix de détail d'une ville du Canada à l'autre a été mise au point pour l'alimentation; par la suite, on l'a étendue à d'autres postes du budget familial tels que l'habillement, les transports, l'entretien du ménage, la santé et les soins personnels, les loisirs, la formation et la lecture, et le tabac et l'alcool. Au total, les comparaisons d'une ville à l'autre portent sur des biens et des services constituant près des trois quarts du budget servant actuellement à construire l'indice des prix à la consommation au Canada, la seule grande omission étant le logement (location et frais de possession). Sans vouloir nier l'importance des différences en ce qui concerne le logement dans toute comparaison globale du niveau général des prix auxquels les consommateurs doivent faire face dans divers centres urbains, il faut bien dire que les problèmes que comporteraient l'établissement d'une comparaison valable d'une ville à l'autre sont tels qu'ils nécessitent plus de recherche. Entre-temps, on estime que malgré l'absence actuelle de données sur les dépenses de logement, la publication de comparaisons des prix de détail pour d'autres postes du budget permettra de faire de gros progrès en ce qui concerne la satisfaction des besoins variés des utilisateurs.

On trouvera au Tableau 14 le résultat d'une mise à jour de mesures de prix de détail tirées précédemment jusqu'à mai 1971, ainsi que des données plus complètes sur plusieurs villes. Une explication plus détaillée de l'étude dont le tableau en question est tiré figure dans les livraisons de novembre 1968, novembre 1969, et avril 1972 de *Prix et indices des prix* (no 62-002 au catalogue).

Les premières données de base pour la présente étude ont été constituées par l'importante collection de prix de détail recueillie lors de la confection des indices nationaux et urbains des prix à la consommation. Au moment d'établir ces comparaisons géographiques de prix, on s'est efforcé d'assurer la comparabilité en prenant des biens et des services de qualité égale et en assortissant autant que possible les points de vente au détail par type. Les relations de prix entre paires de villes ont été calculées puis converties à la base commune des prix de Winnipeg = 100 afin de faciliter des comparaisons pour l'ensemble de toutes les villes. Sauf pour les denrées alimentaires et les voitures neuves, pour lesquelles les différences de prix entre villes ont été tirées

price data, the updating of these measurements of inter-city detail price differentials was accomplished by application of the relative movement of prices, at the item level in each city, over the intervening periods as derived from the relevant city consumer price indexes. These price relationships at the item level were aggregated on the basis of the Canada urban consumer spending pattern, rather than the patterns applicable to individual cities. While differences in spending patterns exist among cities, the magnitude of these differences in the cities covered is not such as to affect most of the spatial comparisons significantly. Because of the previously mentioned absence of shelter price relationships, which may be of considerable significance in any overall comparison of inter-urban retail price differentials, aggregative indexes beyond major budget groupings are not shown.

The weighting factors used to combine items to group and component levels in Table 14 are based on 1957 expenditures, and therefore will not be identical to the 1967 weights, introduced in May 1973, in Consumer Price Index tables.

It should be noted that the retail prices used in this comparison, being those faced by consumers, include sales and excise taxes as applicable. Variations between provinces in the scale of sales taxes imposed on a wide range of non-food commodities can be of significance in explaining inter-city price differentials for these items.

While these indexes have been expressed in terms of Winnipeg = 100, the selection of Winnipeg as the base city has no special significance, and the indexes may be expressed on the base of any of the individual cities included.

#### Farm Input Price Indexes (1961 = 100)

Farm Input Price Indexes measure, through time, changes in prices of commodities and services used in Canadian farming operations. The item content and weights are based on data from the 1958 Farm Income and Expenditure Survey, the most recent source of sufficiently detailed data. These data have been modified to reflect 1961 prices and conditions. Farm Input Price Indexes are calculated quarterly for Eastern, Western and all Canada on a 1961 = 100 time base.

Farm Input Price Indexes replace one of the two major component indexes of the previously published series, Price Index Numbers of Commodities and Services Used by Farmers, 1935-39 = 100. The latter index was composed of a Farm Family Living Index and a Composite Index Exclusive of Living Component. The Farm Input Price Indexes replaces the Composite Index Exclusive of Living Component from 1961 forward.

directement de nouvelles comparaisons fondées sur les données de mai 1971, la mise à jour de ces mesures des différences de prix de détail entre les villes a été assurée grâce à l'extension des mouvements relatifs de prix au niveau de chaque article dans chaque ville aux périodes observées selon le calcul établi à partir de l'indice des prix à la consommation pour la ville en question. Ces relations entre les prix au niveau de l'article ont été agrégées sur la base des habitudes de consommation du citoyen pour l'ensemble du Canada et non pas selon les habitudes de dépense applicables à des villes individuelles. Même s'il existe des différences dans les habitudes de dépense d'une ville à l'autre, l'importance de ces différences en ce qui concerne les villes dont il est question ici ne sont pas suffisantes pour influencer sensiblement sur la plupart des comparaisons géographiques. Du fait de l'absence des relations de prix en ce qui concerne le logement, dont il a déjà été question ci-dessus et qui pourrait avoir une importance considérable chaque fois que l'on voudrait tirer une comparaison globale entre les différences de prix à la consommation au détail d'une ville à l'autre, on ne trouvera ici aucun indice synthétique agrégé au-delà des principales composantes du budget.

Les facteurs de pondérations utilisés pour regrouper les articles en groupes et en éléments dans le Tableau 14 sont basés sur les dépenses de 1957; ils ne sont donc pas identiques aux pondérations de 1967 adoptées en mai 1973 dans les tableaux relatifs à l'indice des prix à la consommation.

Il faut remarquer que les prix de détail ayant servi à la présente comparaison sont ceux que doit payer le consommateur et comprennent donc les taxes de vente et les taxes d'accises qui peuvent s'appliquer. Les différences d'une province à l'autre entre les barèmes de taxe de vente imposés sur une grande variété de biens non alimentaires peut avoir une grande importance pour expliquer les différences de prix d'une ville à l'autre pour les articles en question.

Le fait que ces indices aient été exprimés en prenant Winnipeg = 100 ne signifie pas que le choix de Winnipeg comme ville de référence ait une signification particulière et les indices pourraient être exprimés sur la base de n'importe laquelle des villes qui y figurent.

#### Indices de prix des entrées dans l'agriculture (1961 = 100)

Les indices de prix des entrées dans l'agriculture mesurent l'évolution dans le temps du prix des produits et des services utilisés dans l'exploitation agricole au Canada. Les articles qui y sont compris, ainsi que leurs poids, sont fondés sur l'enquête de 1958 sur les revenus et les dépenses des agriculteurs, qui constitue la source la plus récente dont les données soient suffisamment détaillées. Ces données ont été adaptées de manière à rendre compte des prix et des conditions constatées pour 1961. Les indices des prix des entrées dans l'agriculture sont calculés chaque trimestre pour l'Est, l'Ouest et l'ensemble du Canada sur la base 1961 = 100.

Les indices des prix des entrées dans l'agriculture remplacent l'un des deux principaux éléments d'indices de la série précédente sur l'indice de prix des produits et services utilisés par les agriculteurs, (1935-39 = 100). Cet indice comprenait l'indice du coût de la vie pour les familles agricoles et l'indice synthétique sans le coût de la vie. Les indices des prix des entrées dans l'agriculture remplacent l'indice synthétique sans le coût de la vie à partir de 1961.

A detailed description of concepts, methods and data sources is contained in the occasional paper, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-534, and is reproduced in the September 1971 issue of *Prices and Price Indexes*, Catalogue No. 62-002. The foregoing publications also contain total and component price indexes for Eastern, Western, and all Canada, from 1961 to and including the third quarter 1971.

Current price indexes will be published on a regular basis in the quarterly publication, *Farm Input Price Indexes, 1961=100*, Catalogue No. 62-004, and in the monthly publication *Prices and Price Indexes*, Catalogue No. 62-002.

The Farm Family Living component of the 1935-39 series has not been replaced by an updated counterparts, and publication has been suspended.

### Security Price Indexes

Security price indexes measure through time the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on Toronto, Montreal and Canadian stock exchanges. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the common and mining stock indexes are Thursday's closing quotations as reported in the *Globe and Mail* and the *Montreal Gazette*. For preferred stocks, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The price reference base for the indexes is the year 1956 which has been adopted as an interim base for recently developed Statistics Canada indexes. The indexes express prices as a percentage of price in 1956 and arithmetically converted to the 1961=100 base.

Revised indexes on the base 1956=100 were first presented in the June 1962 issue of this publication. The most important change in the revision of the index, apart from the shift in the price reference base, is the classification of stocks according to the Standard Industrial Classification. In the continuing major group Industrials 4 sub-groups (Milling and Grains, Food and Allied Products, Machinery and Equipment, and Building Materials) have been replaced by 8 new subgroups (Foods, Printing and Publishing, Primary Metals, Metal Fabricating, Non-Metallic Minerals, Chemicals, Construction and Retail Trade). The remaining 5 sub-groups of the former index, viz., Industrial Mines, Beverages, Textile and Clothing, Pulp and Paper, and Oils (renamed Petroleum) have been continued. The major group Utilities is continued but the Pipelines index has been added as a sub-group and the previous Power and Traction sub-group has been replaced by two new sub-groups, viz., Electric Power and Gas Distribution. A new major group Finance is composed of the former major group Banks and the former supplementary index Investment and Loan. Constant weights, which were previously limited to major groups, have been extended to sub-groups. Weights in the index continue to be based on shares outstanding.

Le bulletin hors série *Farm Input Price Indexes, 1961=100* (no 62-534 au catalogue) contient une description détaillée des concepts, des méthodes et des sources de données qui est reprise dans *Prices and Price Indexes* de septembre 1971 (no 62-002 au catalogue). Ces deux bulletins contiennent également les indices des prix totaux et partiels pour l'Est et l'Ouest du Canada et pour l'ensemble du Canada, de 1961 au troisième trimestre de 1971 inclusivement.

Les indices des prix en cours seront publiés régulièrement dans le bulletin trimestriel *Farm Input Price Indexes, 1961=100* (no 62-004) et dans le bulletin annuel *Prices and Price Indexes* (no 62-002).

On n'a pas remplacé l'indice du coût de la vie pour la famille agricole des séries de 1935-39 par un équivalent à jour et on a cessé de la publier.

### Indices des cours des valeurs mobilières

Les indices des cours des valeurs mobilières donnent une mesure dans le temps de l'effet du mouvement des prix sur la valeur d'un portefeuille de titres achetés et détenus par un placeur hypothétique (et non pas un spéculateur). Le portefeuille représente des titres des sociétés canadiennes cotées à la Bourse de Toronto, de Montréal et à la Bourse canadienne. Le nombre d'actions détenues pour chaque émission est proportionnel au nombre total d'actions en circulation. Les indices des prix de titres ordinaires et des titres miniers sont les cours de fermeture de la Bourse du jeudi indiqués dans le *Globe and Mail* et dans le *Montreal Gazette*. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles. Pour les actions privilégiées, les prix sont les moyennes pondérées mensuelles du total des ventes quotidiennes. La base de pondération entre les sous-groupes est l'année 1956. Toutes les séries ont été recalculées sur la base de 1961=100. Les indices sont pondérés d'après le nombre d'action en circulation.

Les indices révisés sur la base 1956=100 ont été publiés pour la première fois dans la livraison de juin 1962 de ce bulletin. La plus importante modification à la révision de l'indice, à part le changement de la période de référence, a été le classement des actions d'après la Classification des activités économiques. Dans le cas du grand groupe des valeurs industrielles, 4 sous-groupes (minoterie et céréales, aliments et produits connexes, machines et matériel et matériaux de construction) ont été remplacés par deux nouveaux sous-groupes (aliments, imprimerie et édition, métaux primaires, produits métalliques, minéraux non métalliques, produits chimiques, construction et commerce de détail). On a conservé les 5 autres sous-groupes de l'ancien indice: mines industrielles, boissons, textiles et habillement, pâte et papiers, huiles (sous la désignation de pétrole). Le grand groupe des services d'utilité publique a été conservé mais l'indice des pipelines a été ajouté comme sous-groupe et l'ancien sous-groupe d'énergie et traction a été remplacé par deux nouveaux sous-groupes: l'énergie électrique et la distribution du gaz. Le nouveau grand groupe "Finances" est composé de l'ancien grand groupe banques et de l'ancien indice supplémentaire investissements prêts. Les facteurs constants de pondération qui étaient autrefois limités aux grands groupes s'appliquent maintenant aux sous-groupes. Les facteurs de pondération de l'indice continuent à être basés sur les actions en circulation.

For the list of stocks currently included in the Investors Index and Preferred Index, see *Prices and Price Indexes* for February 1973.

### Residential and Non-Residential Building Construction Price Indexes

The fixed-weighted input price indexes of materials and wage rates for residential and non-residential building construction are being published here for the convenience of users (Table 20). A more complete description of the characteristics of the indexes appeared in the May 1970 issue of *Prices and Price Indexes*, and this explanation is available on request from the Prices Division, as is historical monthly data for the series.

Because the indexes measure the impact of price change on the materials and labour inputs to construction, and not the effects of changes in profit margins or productivity, there is thought to be an upward bias in these indexes as indicators of price change for the output of building construction, or buildings in place. Users are therefore warned to exercise caution in making use of the series, for this purpose. A comparison of these series with the implicit price deflators (1) providing an estimate of price change for the output of the industry, derived from the measurement of gross fixed capital formation in constant dollars, will provide some insight into the effects on the price movement of adjusting the fixed-weighted input indexes for changes in productivity and profit margins.

During the period from 1926-1966 a special sample of respondents supplied materials prices for the index. As of 1961 this sample has been replaced with prices from the ISPI system (2). The latter are published monthly in Table 2 of this publication.

The Construction wage rate series is based on wage rate material supplied by the Labour Standards Branch, Dept. of Labour, and relates to minimum wages paid on government contracts for construction in a variety of trades and cities.

Users are reminded that the indexes were arithmetically rebased to the year 1961 = 100 and therefore combining the components with the weights as shown will not provide the composite index provided. Users able to provide their own weights for the components can recombine the components to suit their particular needs.

### Basic Union Wage Rate Indexes for Major Construction Trades

Basic union wage rate indexes are prepared for 12 major construction trades in each of 14 cities in Canada. Weighted average city indexes are prepared as well as a 14 city composite. Indexes are released quarterly in summary form in Tables 21 and 22 of *Prices and Price Indexes* (62-002). This index is found in Table 20 of *Prices and Price Indexes* (62-002). Full trade detail, by city, is published

La liste des titres repris actuellement dans les indices des valeurs de placements et dans les indices des valeurs privilégiées se trouve dans *Prix et indices des prix* de février 1973.

### Indices des prix de la construction résidentielle et non résidentielle

Les indices à pondération fixe des prix des entrées de matériaux et de salaires dans la construction résidentielle et non résidentielle sont publiés ici pour faciliter la tâche aux utilisateurs (Tableau 20). On trouvera une description plus détaillée des caractéristiques des indices dans *Prices—and—Price—Indexes* de mai 1970. On peut s'en procurer un exemplaire ainsi que les données mensuelles chronologiques sur cette série en s'adressant à la Division des prix.

Comme les indices mesurent l'influence des variations de prix sur les entrées de matériaux et de main-d'œuvre du bâtiment plutôt que les répercussions des variations de marges bénéficiaires ou de productivité, on les croit surestimés en tant qu'indicateurs des variations de prix de la construction, ou des bâtiments construits. Les utilisateurs devront donc faire preuve de discernement quand ils se serviront des séries à cette fin. Si l'on compare ces séries avec les facteurs de dégonflement (1) des prix implicites (qui donnent une estimation de la variation du prix pour la production de l'industrie), obtenus en mesurant la formation brute de capital fixe en dollars constants, on aura un aperçu des effets de l'ajustement sur l'évolution des prix des indices à pondération fixe des entrées pour tenir compte des variations de productivité et de marges bénéficiaires.

Au cours de la période 1926-1966, un échantillon spécial d'enquêtés a donné les prix pour l'indice. En 1961, on a remplacé cet échantillon par les prix tirés du système I.P.V.I. (2). Ces prix sont publiés par mois dans le Tableau 2 du présent bulletin.

La série consacrée au taux de rémunération dans l'industrie du bâtiment est basée sur les chiffres fournis par la Direction des normes du travail du ministère du Travail; elle a trait au salaire minimum versé aux termes de marchés signés avec le gouvernement pour des travaux de construction dans divers corps de métiers et dans diverses villes.

Nous rappelons aux utilisateurs que les indices ont été recalculés sur la base 1961 = 100 et qu'ils n'obtiendront pas l'indice synthétique fourni en combinant les éléments et les pondérations donnés. Les utilisateurs qui sont à même de fournir leur propre pondération pour les éléments peuvent procéder à leur propre combinaison adaptée à leurs besoins spécifiques.

### Indices du salaire syndical de base dans les principaux corps de métiers

Les indices du salaire syndical de base portent sur les 12 principaux métiers de la construction dans 14 grandes villes canadiennes. On calcule les indices pondérés moyens pour chaque ville de même que l'indice synthétique des 14 villes. Les indices sont publiés chaque trimestre dans les Tableaux 21 et 22 de la publication *Prix et indices des prix* (numéro de catalogue 62-002). On peut trouver cet indice dans le Tableau 20 de la publication

(1) Gross National Product Division, Statistics Canada.  
(2) *Industry Selling Price Indexes 1956-1968* Cat. 62-528.

(1) Division du produit national brut, Statistique Canada.  
(2) *Indices des prix de vente dans l'industrie, 1956-1968*, no 62-528 au catalogue.

quarterly in the Construction Price Statistics Service Bulletin, (62-006).

Rates utilized in index calculations are derived mainly from the *Construction Collective Agreement Survey Service* provided by the Canadian Construction Association. These rates are supplemented as necessary by surveys of some union locals. While indexes containing supplementary benefits will be available soon, presently published indexes relate to basic union wage rates only. The rates indicate the rate of straight time compensation for one hour in the city specified. Rates converted into the form of ratios were combined into weighted average city indexes utilizing 1961 Census of Population data on numbers of people employed by trade and average earnings in the construction industry.

The base-weighted indexes provide an estimate of the impact of rate change on basic union wages for the major construction trades employed in a given city. Because union workers in cities tend to be engaged mainly in non-residential or commercial building construction and because rates for trades associated with engineering work were excluded from the price sample the indexes best approximate wage rate change for non-residential construction.

### Highway Construction Price Indexes (1961 = 100) (3)

The Price Indexes of Highway Construction in Canada express prices paid by provincial governments in contracts awarded for highway construction each year, as a percentage of prices paid in 1961. The arithmetic conversion of the indexes to a 1961 time base does not change their percentage movements as compared to the previously published indexes to a 1956 = 100 time base. Users are warned that an aggregation of the converted major group indexes with the published weights will not yield the published 1961 = 100 all items indexes. The conversion does not create this problem for a user wishing to reweight the converted major group indexes using weights appropriate to this own purpose.

Base-weighted indexes are published annually and measure, for the period 1956 to 1968, the effect of price change on the cost of specific programmes of highway construction in Canada represented by highway construction contracts of approximately \$50,000 or more awarded by specified provincial governments during the weight-base period. Weights of items in the index, representing the relative importance of units of construction in the year 1956 are held constant. Only the estimates of prices change from year to year, and the indexes thus measure the movement of prices through time. For a more complete statement of the problem of estimating price change for highway construction see pages vi & vii of the December 1967 issue of *Prices and Price Indexes*, Catalogue 62-002 and pages 9 & 10 of the reference paper Price Indexes of Highway Construction in Catalogue 62-520. The all-items index or its components are useful for planning and budgeting for highway construction programmes, in escalating or updating previously costed roadwork, in estimating replacement cost of previously

(3) The years refer to fiscal years. Thus 1968 refers to the period April 1, 1968 to March 31, 1969.

*Prix et indices des prix* (no 62-002). Des données détaillées sur tous les métiers de la construction dans chaque ville sont publiés chaque trimestre dans le bulletin de service *Statistique des prix dans la construction* (numéro de catalogue 62-006).

Les taux utilisés dans le calcul des indices proviennent principalement de la publication *Construction Collective Agreement Survey Service* de l'Association canadienne de la construction. Des enquêtes auprès de certaines succursales de syndicats ont été menées lorsqu'il fallait disposer de taux supplémentaires. On publiera sous peu des indices contenant les avantages supplémentaires, mais les indices actuels portent uniquement sur le salaire syndical de base. Les taux correspondent à la rémunération normale pour une heure dans la ville en question. Les taux convertis en ratios ont été transformés en indices pondérés moyens des villes à partir des données tirées du recensement de la population de 1961 sur les effectifs de chaque métier et les gains moyens dans l'industrie de la construction.

Les indices pondérés permettent d'évaluer l'influence de la variation du taux des salaires syndicaux pour les principaux métiers de la construction dans une ville donnée. Etant donné que les travailleurs syndiqués dans les villes s'occupent surtout de la construction non résidentielle, ou commerciale, et que les taux de métiers relevant du génie civil n'ont pas été inclus dans l'échantillon des prix, les indices constituent la meilleure approximation de variations dans les taux de salaire dans la construction non résidentielle.

### Indices des prix de la construction routière (1961 = 100) (3)

Les indices des prix de la construction routière au Canada représentent les prix payés chaque année par les administrations provinciales au titre des marchés de construction routière, en pourcentages des sommes payées en 1961. La conversion des indices à la base 1961 = 100 ne modifie pas leur évolution en pourcentages comparativement aux indices publiés précédemment et dont la base était 1956 = 100. Les utilisateurs ne doivent pas s'attendre à ce que le groupement des indices convertis des grands groupes et des pondérations publiées donne l'indice général publié (1961 = 100). Cette conversion ne pose aucun problème à l'utilisateur qui désire réviser la pondération des indices convertis des grands groupes en utilisant les poids adaptés à ses fins propres.

Les indices pondérés en fonction de la base sont publiés chaque année; ils mesurent, pour la période allant de 1956 à 1968, l'influence de l'évolution des prix sur le coût des programmes spécifiques de construction de routes au Canada représentés par les marchés de construction de routes d'environ \$50,000 ou plus accordés par certaines administrations provinciales au cours de la période visée par la base de pondération. Les poids des éléments des indices qui représentent l'importance relative des unités de construction en 1956 sont constants. Seules les estimations de prix varient d'une année à l'autre; les indices mesurent donc l'évolution des prix dans le temps. Pour plus de détails sur l'estimation de l'évolution des prix pour la construction routière, se reporter aux pages vi et vii du numéro de décembre de *Prices and Price Indexes* (N° 62-002 au catalogue de Statistique Canada) et aux pages 9 & 10 du bulletin intitulé *Price Indexes of Highway Construction in Canada* (no 62-520 au catalogue de Statistique Canada). L'indice général ou ses éléments servent à la planification et à la budgétisation des programmes de construction routière, à indexer ou mettre à jour les prix de travaux de routes effectués précédemment.

(3) Il s'agit d'exercices financiers. 1968 représente donc la période de 1er avril 1968 au 31 mars 1969.

Completed roadwork, and as historical measurements of price trends in highway construction.

The indexes do not necessarily reflect the price movements of non-contract construction or maintenance work. The indexes are designed to measure price changes for a fixed programme of highway construction, in each of the seven provinces. Because price levels in the time base-period (1961) varied from province to province the indexes cannot be used to compare price differences between provinces, but only to compare differences in the rate at which prices are changing in the provinces.

Prices contained in the index are not for units of labour and materials as is usually the case in construction price indexes but rather for units of construction work put in place such as an acre of clearing, a cubic yard of earth excavation or a ton of bituminous hot-mix paving. In addition, the index contains prices of some materials, such as invert pipe, usually supplied to the contractor by the highway departments. Prices of highway construction work are annual weighted averages of bid prices of units of construction in groups of contracts awarded, classified by price-determining characteristics of the contracts and the bid items such as volume of the bid item, type of contract and geographic location. Prices of material items of supply are prices paid by government departments to suppliers.

#### Price Indexes of Electric Utility Construction

In electric utility terms, the index is designed to provide an estimate of the impact of price change on the cost of materials, labour and equipment used in constructing and equipping electric utilities in a specified base period. The index provides an estimate of how much more, or less it would cost to reproduce the base-period programme of construction in another period, using the same construction technology as in the base period and assuming rates of profit and productivity in construction are the same in both periods.

As the market does not yield comparable selling prices for such unique transactions as, for example, the sale of a transmission line, it was not possible to produce an index of the prices of completed structures. Completed structure indexes would be appropriate for users wishing either to estimate reproduction costs or to deflate capital formation. For such uses the indexes introduced in this publication have specific short-comings. Nonetheless, they may be helpful for other purposes provided the users understand the deficiencies. Thus the reader is asked to make particular note of Section 6, of Occasional Paper Catalogue 62-526 Price Indexes of Electrical Utility Construction - The Necessity for Compromise and Section XI, (of the same paper) Uses and Limitations. In addition, because particular construction projects are unique, the aggregate indexes will not likely be appropriate for specific projects since they relate to an average mix of materials, labour and equipment derived from a variety of projects in a specific base period. Thus, if the component price indexes and their weights included in the aggregate index presented herein are inappropriate for a particular purpose the user should consider selecting appropriate com-

ment, à estimer le coût de remplacement des travaux routiers achevés précédemment et à mesurer chronologiquement l'évolution des prix de la construction routière.

Les indices ne reflètent pas nécessairement l'évolution des prix de la construction effectués hors marché ou des travaux d'entretien; ils servent à mesurer les variations de prix pour un programme déterminé de construction routière dans chacune des sept provinces. Au cours de la période qui a servi de base (1961), les niveaux de prix ont varié d'une province à l'autre; aussi, on ne peut utiliser les indices pour comparer des différences de prix entre les provinces mais on peut seulement les employer pour comparer les différences entre taux de variation des prix dans les provinces.

Les prix compris dans l'indice ne se rapportent pas aux unités de travail ni de matériaux comme c'est habituellement le cas dans l'indice des prix de la construction; ils se rapportent plutôt aux unités de travail de construction effectué, comme le défrichement d'une acre de terrain, l'excavation d'une verge cube ou l'épandage à chaud d'une tonne de béton bitumineux. En outre, l'indice comprend le prix de certain matériaux, par exemple, les tuyaux de ponceau fournis habituellement à l'entrepreneur par les ministères de la Voirie. Les prix des travaux de construction routière sont des moyennes pondérées des prix de soumission pour les unités de construction par groupe de marchés classés selon les caractéristiques des marchés qui déterminent le prix et les éléments d'offre tels que le volume de chaque poste, le type de marché et la situation géographique. Les prix de matériaux fournis sont les prix payés par le ministères au fournisseurs.

#### Indices des prix à la construction dans les services d'électricité

En ce qui concerne les services d'électricité, l'indice a pour but de fournir une estimation des conséquences des variations de prix sur le coût des matériaux, de la main-d'oeuvre et du matériel utilisés dans la construction et l'équipement des services d'électricité au cours d'une période de référence donnée. L'indice sert à mesurer combien il faudrait payer en plus ou en moins pour réaliser un programme de construction identique à celui de la période de référence en utilisant les mêmes techniques de construction et en supposant que les taux de rentabilité et de productivité de la construction soient les mêmes pour les deux périodes.

Comme il est impossible d'obtenir directement sur le marché des prix de vente comparables pour des opérations de caractère aussi unique, par exemple, que la vente d'une ligne de transport d'énergie, Statistique Canada n'a pu établir un indice du prix des installations en place. Un tel indice ne serait utile que si l'on désirait obtenir une estimation des sommes qu'il faudrait engager pour réaliser à nouveau un programme de construction identique ou encore pour dégonfler une formation de capital. Les indices publiés ici présentent en ce sens certaines lacunes. Ils peuvent néanmoins servir à de telles fins pourvu que les utilisateurs en comprennent les limites. Les lecteurs peuvent se rapporter aux Sections III et XI de la publication *Price Indexes of Electrical Utility Construction* (Statistique Canada, 62-526): "The Necessity for Compromise" et "Uses and Limitations". De plus, en raison du caractère unique de chaque projet de construction, l'indice synthétique ne pourra sans doute pas s'appliquer à un projet bien précis car il porte justement sur une moyenne des matériaux, de la main-d'oeuvre et du matériel utilisés dans la réalisation de plusieurs projets au cours d'une période de référence donnée. Ainsi, si les indices détaillés et les poids correspondants qui composent les indices synthétiques présentés ici ne conviennent

ponent indexes from among those published herein. These indexes could then be combined into an aggregate index by utilizing weights derived from the projects or assets to be costed or deflated.

Prices used in the indexes are for the most part selling prices reported monthly by manufacturers for materials or equipment. The price reported is for units and terms of sale representative of the volume sales of the manufacturer. Where sales to electric utilities form a small share of the total sales of the manufacturer, the price reported may not adequately represent the price to the construction trade and others directly involved in constructing and equipping electric utility facilities. In such cases, prices charged other manufacturers or wholesalers have been included in the index. Federal sales tax changes are reflected in the index but no adjustments have been made for provincial tax changes. Until December 1964 wage rate data were supplied by the Federal Department of Labour and represented minimum hourly rates paid to construction workers in major cities employed on federal government contracts. In 1965 union basic wage rates reported by major utilities and some contractors were incorporated into the index. The sample selected provides an estimate of wage rate change for urban own account and contract electric utility construction. Some further improvements will be made to improve the coverage relating to rural non-union work for transmission lines.

Construction has been defined as new construction or major reconstruction for distribution systems, transmission lines and transformation or switching stations. Maintenance and operating costs are excluded. Cost data were supplied by major utilities, relating to own account and to contract construction erected during the last half of the 1950's. Weights were derived from these data which indicated the relative importance of the major inputs to the construction. The components of cost relating to distribution and transmission facilities encompass such items as poles, hardware, conductors, insulators, meters, distribution transformers and expenditures for labour, e.g. - linemen and groundmen. Costs relating to construction equipment such as trucks, and components of equipment operating costs such as tires, gasoline and repairs were also included. Transformation and switching stations encompass some of the items listed above but the most important elements of cost relate to transformers and switching equipment. Expenditures for land and rights-of-way have been excluded.

The term Canadian electric utility has been defined to include municipal as well as nonmunicipal utilities but the majority of the cost data tabulated was derived from the major nonmunicipal utilities. Manufacturers who produce electricity for their own use and who may also sell electricity have been excluded from the cost survey.

pas à un usage bien précis, l'utilisateur pourra toujours se servir des autres indices détaillés et construire, à l'aide des coefficients de pondération, les indices de son choix, soit pour évaluer le coût d'un projet, soit pour établir des facteurs de dégonflement.

La plupart des prix des matériaux et du matériel utilisés pour établir les indices sont les prix de vente déclarés mensuellement par les fabricants. Ces prix sont représentatifs des unités de mesure et des conditions de vente valables pour les ventes d'une grande quantité de fabricants. Lorsque les ventes aux services électriques ne représentent qu'un faible pourcentage du chiffre d'affaire d'un fabricant, il est possible que le prix déclaré ne représente pas de façon satisfaisante le prix consenti aux entreprises en construction et aux autres industries s'occupant directement de construction et d'installation de services d'électricité. Dans ce cas, on a inclus dans l'indice les prix facturés aux autres fabricants ou grossistes. On a tenu compte, dans l'établissement de l'indice, des variations de la taxe de vente fédérale; toutefois, il n'a été fait aucun redressement pour les variations de taxe provinciale. Jusqu'en décembre 1964, les données sur les taux de rémunération étaient fournies par le ministère fédéral du Travail et représentaient le salaire horaire minimum versé aux personnes travaillant au titre d'un marché accordé par le gouvernement fédéral dans certaines grandes villes. En 1965, on fit entrer dans l'indice le salaire de base exigé par les syndicats et déclaré par les principaux services et par certains entrepreneurs. L'échantillon choisi représente donc une estimation des variations du taux de rémunération dans la construction en ville de services électriques pour compte propre ou au titre d'un marché. Certaines améliorations à l'indice sont prévues de façons à l'étendre aux personnes non syndiquées travaillant dans les régions rurales à la construction de lignes de transport d'énergie.

Le terme "construction" a été défini comme étant la construction neuve ou la réparation des réseaux de distribution, des lignes de transport d'énergie, de postes de transformation ou de postes de manœuvre. L'entretien et les frais d'exploitation ne sont pas compris. Les données sur les prix de revient sont fournies par les principaux services d'électricité et portent sur la construction exécutée pour compte propre ou au titre d'un marché au cours de la deuxième moitié des années cinquante. Les poids tirés de ces données représentent l'importance relative des principaux éléments entrant dans la construction. Les composantes du coût de distribution et du transport comprennent certains éléments comme les poteaux, la quincaillerie, les conducteurs, les isolateurs, les compteurs, les transformateurs de distribution et les dépenses de main-d'œuvre (monteurs, personnel de service, etc.). Les dépenses entraînées par le matériel de construction (camions et pièces d'équipement) et les frais d'exploitation (pneus, essence et réparations) sont également inclus. Les postes de transformation et les postes de transformation et les postes de manœuvre comprennent certains des éléments ci-dessus; les frais les plus importants sont cependant entraînés par les transformateurs et les appareils de connexion. Les dépenses foncières et les droits de passage ont été exclus.

Par définition, l'expression "service d'électricité canadien" englobe aussi bien les services municipaux que les autres; toutefois, la majeure partie des données de coût ont été tirées des déclarations des services non municipaux. Les fabricants qui produisent de l'électricité destinée à l'auto-consommation et qui peuvent également vendre de l'électricité ont été exclus de l'enquête.

## Price Indexes of Hydro-electric Generating Stations

The following additional points may be of assistance to users of the hydro-electric generating stations index which is described in some detail in Statistics Canada Occasional Paper, Catalogue 62-533.

- (a) Wage rate data are derived from a variety of sources but mainly from the Canadian Construction Association surveys of union agreements and from Federal Pay Research Bureau studies of salaries paid professional, technical and clerical personnel. Basic wage rates, excluding fringe benefits, were used in index calculations.
- (b) Prices for ready-mix concrete and for earth and gravels in place have been utilized as replacements for input prices of labour, materials and equipment rental for concrete production and embankments in place.
- (c) Prices are included for some categories of expense not previously included in input price indexes for construction: interest during construction, overhead expense and the provision and operation of temporary camp accommodation.
- (d) Weighting patterns exclude expenditure for ancillary facilities for logging and navigation permanent houses, etc.

## Price Indexes of Machinery and Equipment

In response to the need of users wishing either to reflect expenditure data of machinery and equipment for the change or to make comparison of commodity movement, a system of machinery and equipment indexes has been under development for a number of years. This is a system of industry indexes relating to types of equipment purchases made by establishments belonging to industries as defined by the 1960 Standard Industrial Classification.

The base-weighted indexes give an estimate of how much more, or less, it would cost today to purchase a group of machines specified for a particular base period.

The interim time base for the indexes is 1968 = 100. Most of the data from which weighting patterns were derived came from 1968 or nearby years. Such data were usually supplied by major purchasers.

Conceptually purchasers' prices should be utilized in the indexes but because of a number of practical problems, manufacturers' selling prices were usually used. Such prices were then corrected as relevant for duty, exchange and general sales tax.

Foreign prices utilized in the index are either U.S. Bureau of Labour Statistics commodity indexes or Prices and Cost collections from manufacturers most of whom reside in the United States.

## Indices de prix des centrales hydroélectriques

Les points supplémentaires ci-après peuvent aider les utilisateurs de l'indice de centrales hydroélectriques décrit en détail dans le bulletin hors-série de Statistique Canada portant le numéro 62-533.

- (a) Les données sur le taux de rémunération proviennent de diverses sources et surtout des enquêtes sur les accords syndicaux de l'Association canadienne de la construction et des études du Bureau de recherche sur les traitements portant sur la rémunération des travailleurs intellectuels, des techniciens et du personnel administratif. Pour le calcul de l'indice, on a utilisé les taux de rémunération de base, avantages sociaux non compris.
- (b) Au lieu du prix des entrées de main-d'oeuvre, de matériaux et de location de matériel pour la production de béton et des remblais effectués, on a utilisé le prix du béton préparé et celui de la terre et du gravier en place.
- (c) L'indice comprend les prix correspondant à certains postes de dépenses qui n'étaient pas repris auparavant dans les indices de prix des entrées dans la construction: intérêts pendant la construction, frais généraux, fourniture et entretien de barraquements temporaires.
- (d) Les facteurs de pondération ne comprennent pas les dépenses affectées aux installations auxiliaires pour l'exploitation forestière et la navigation, les maisons permanentes, etc.

## Indices des prix des machines et du matériel

Afin de répondre au besoin des utilisateurs qui désirent réviser les données sur les dépenses en machines et en matériel en fonction des changements de prix ou établir une comparaison du mouvement des marchandises, on prépare depuis un certain nombre d'années un système d'indices des prix des machines et du matériel. Il s'agit d'un système d'indices par industrie ayant trait aux genres d'achats de matériel des établissements qui font partie des industries définies dans la Classification type des industries de 1960.

Les indices pondérés en fonction de la base donnent une estimation de la différence du prix d'achat d'un groupe de machines déterminé pour une période de base donnée.

La base provisoire pour les indices est 1968 = 100. La plupart des données dont on a extrait les facteurs de pondération dataient de 1968 environ. D'habitude, ces données étaient fournies par les principaux acheteurs.

Du point de vue conceptuel, on devrait utiliser les prix des acheteurs dans ce genre d'indices, mais on a habituellement employé les prix de vente de fabricants pour des questions d'ordre pratique. On a ensuite apporté à ces prix les corrections appropriées pour les droits de douane, le change et la taxe de vente fédérale.

Les prix étrangers utilisés dans l'indice sont les indices de prix des marchandises du U.S. Bureau of Labour Statistics ou ceux que la Division des prix a recueillis auprès des fabricants dont la majorité réside aux États-Unis.

The first industry index was released mid-1971 and related to purchases by the construction industry. Indexes for other industries will be released from time to time as they become available. In the interim preliminary indexes for a number of other industries are available on request. Certain commodity indexes which exclude adjustments for exchange, duty and federal sales tax can also be provided on request.

Le premier indice par industrie a été publié au milieu de 1971; il se rapporte aux achats de l'industrie de la construction. Les indices des autres industries seront publiés de temps à autre à mesure qu'ils seront disponibles. En attendant, on peut obtenir sur demande les indices préliminaires pour un certain nombre d'autres industries. Il en est de même pour certains indices de prix de marchandises, compte non tenu des ajustements pour le change, les droits de douane et la taxe de vente fédérale.
